

ARMOUR ASTIR ADVENT

BY BRIAR SOVEREIGN

FREE BASIC RULES

This arcane text was certified by: Briar Sovereign
Certification Date: 9th September 2022

If the above is empty, please leave this text in the care of your local College associate so that it may be given proper certification. Additionally, please leave yourself in the care of your nearest councillor or judiciary clerk so that you may be properly charged with possession of an uncertified text of magical origin or content.

The Crown thanks you for your diligence and honesty.

Armour Astir: Advent is a high-fantasy roleplaying game about striking back against an authority that seeks to control you.

It is a game of rival pilots clashing in steel-clad Astirs, of soldiers holding their own against the odds, and of spies and diplomats twisting the world to their ends. It is not a game of careful preparation or pleasant truces;

It's hard to change the world without taking a *risk*.

TOUCHSTONES INCLUDE;

- *Mobile Suit Zeta Gundam, Mobile Suit Gundam ZZ, SD Gundam Gaiden, Vision Of Escaflowne, Super Dimension Fortress Macross, Armour Hunter Mellowlink*
- *The Legend of Zelda: Breath of the Wild, Titanfall, Valkyria Chronicles, Final Fantasy VIII, Final Fantasy XII, XCOM 2*

WHAT DO I NEED?

If you're playing in-person, you'll need some 6-sided dice, a copy of this rule book, and printouts of the character playbooks. If you're playing online, you just need the PDFs. You can find links to all these at <https://werefazelle.itch.io/armour-astir>.

CAN I STREAM/RECORD MY ARMOUR ASTIR CAMPAIGNS?

Of course!

WHERE SHOULD I SEND MY FEEDBACK/QUESTIONS?

Feel free to email me at werefazelle@gmail.com with the header 'Feedback (Armour Astir)'.

Also, feel free to join the Armour Astir discord! (<https://discord.gg/5DrDpCr>)

THANKS & FAQ

PLAYTESTING CREWS

THE CREW OF *THE MANY HANDS*

Sean DMR (Luca Sharpe, Impostor of the *Tempest Zephyr*), Evan Nyquist (Impostor of the *Collosus Azure*), LilypadNebula (Cassandra Val Nelithia, Witch of the *Wistful Glance*), Briar Sovereign (Director).

THE CREW OF THE *HELLEBORE*

Austin Walker (Director: Empyrean, Barter, and the forces of the *Divine Principality*), Art Martinez-Tebbel (Briar Brightline, Captain of the Constellation-Class Carrier *Hellebore*, aka *The Ivory Prince*), Sylvia Clare (Cerise Sky, Low Consul of the Center & Arcanist of the Perennial Hallow Aster), Janine Hawkins (Teasel Moad, Witch of *The Day's Eye*), Andrew Lee Swan (Vessel's Gold, Impostor of *The High Price*).

THE CREW OF THE *SALAMANDER*

Em Marko (Agnes Rota, Witch of the *Kubuto*), Lizzy (Astrid Ascendant, team Scout), Jackson Tyler (Avery Sova, Paradigm of the *Caelus*), Alison Autumn June (Ilia Vanseer, Arcanist of the *Aeon*), Briar Sovereign (Director).

THE CREW OF THE *FORGE*

Evan Nyquist (Director), Ben Cornell (Ciaran, crew Scout), Landon Cornell (Stila, Paradigm of the *Vengeance*), and Tasha Zobel (Davée, Imposter of the *Stalker*).

THE CREW OF THE *GOBLIN WHALE*

Sean DMR (Director: Blaidud, Bridge Marshal Kessler, and the forces of the *Cardinal Agglomerate*), Briar Sovereign (Custodian Cobalt, Arcanist of the *Nothic*), Ruby Ariel Lilith Saint Dennis (Lilly / Ren Konsche Klauvei Faut-Naushika, Paradigm of *The Wight Knight*), Andrew (Zaiban Rashilik, Impostor of the *Zyar*), Emily G. (The Duchess of Marmalade, crew Artificer).

THE CREW OF THE *RUBATO RED*

Dax Richardson (Director), Simon Sweetman (The late Cantankerous Tor, Paradigm of the *Tatu Forte*), Rowan Paulsen (Captain Capriccio Hawk, Captain of the Obsidian Overture Cruiser [PIPE ORGAN REFIT] *Rubato Red*), Kris (Aneko Bora, team Scout), Brock McCord (Merric mac Maehve, Impostor of the *Iris Scáith*).

THE CREW OF THE *WHOSE NAME ESCAPES ME*

Jared Haughton (Director), Christopherlyn Nunez (Lalo Alyxi, Arcanist of the *Pazcal's Wager*), Matthew Mlodzienki (Daiko, Imposter of the *Laika III*), Amndeep Singh Mann (Kar Kha, Paradigm of the *Chem Chem*), Killian McDonnell (Abigail Ortega, Captain of the *Whose Name Escapes Me*), God-Forsaken Lizard (Tamir Skellington, crew Artificer).

THE CREW OF THE *MUTED REQUIEM*

Ida Ailes (Director: Captain Pace Ouedraogo, Apollinariya Wolfram III, and the forces of the *Wolfram Union*), Tallula Memory Boysen (Meory Virgo, Tactician of the *Stella née Astro*), Zoey Faye Whiting (Danica Arkose, Diplomat of Choir-state Coralinth, aka Agent Allegro of the Nacrine Tide), Aliza Aphrodite Courtney (Symbol And Deeds, Haunted of the Psalm known as *Union*), Minttu Tabbert ("C", Aligned of the AQA-939)

For corrections or additions to the playtesting crews, email weregazelle@gmail.com.

THANKS & FAQ

QUICK SETUP

Just playing a one-shot and want to get set up as quickly as possible? Follow these steps and you're good to go!

1. Detail your Authority and Cause
2. Detail your Carrier
3. Detail Characters & Choose Playbooks
4. Start Making Stuff Up

DEFINE YOUR AUTHORITY...

The first step is to define your Authority. This should be an oppressive group that the players are interested in fighting back against, however difficult that might be. Also, unless you're feeling particularly unimaginative, they should have a better name than 'the Authority'.

If you're stuck, try thinking about the Authority's goals, why they haven't achieved them yet, and what sort of people are attracted to the Authority.

... AND YOUR CAUSE

The second is to do the same for your Cause - the group that backs and hands orders down to the player characters. As a whole, the Cause should be a group with whom the players align for the time being, even if the occasional representative is an asshole.

If you're stuck, try thinking about who would have the resources to stand up to the Authority, and whether they would do so for purely virtuous ends.

In both cases, you should also think about what their broad aesthetic is, as well as the design of any common Astirs (your Zakus, your Nemos, etc).

QUICK CARRIER

The Carrier is your shared home and the ship that takes you from place to place (think the White Base from Mobile Suit Gundam, or the Normandy from Mass Effect). Decide together what your Carrier looks like, how it moves and how you got it. It has;

- A CREW trait of +1, or +2 if someone chooses to play a Captain.
- A main gun that can shoot down other Carriers but is too slow for Astirs.
- Turrets that can be used to fight off Astirs but will barely scratch a Carrier.

DETAIL CHARACTERS & CHOOSE PLAYBOOKS

The last step is for the players to make their characters!

- Start by choosing a **playbook**—if you've never played a PBTA game before, they're like classes, or archetypes. Talk with the group what kind of action they are interested in, and what kind of playbooks might support that fiction.
- Next, assign the following values to your Traits as you wish: **+2, +1, +0, +0, -1**. Some playbooks have an extra Trait, CHANNEL, which will come with a pre-set value.
- Then, name your character, and pick out some words to describe their look from the examples—or think up your own!
- Next, choose from the gear or equipment options your playbook has. Some playbooks have more than one choice.
- Next, pick some moves from your playbook list (unless it says you don't get to).
- Finally, since you won't be building them in play, fill out a GRAVITY clock with each other player character, describing your relationship or dynamic and giving it a value of +1.

START MAKING STUFF UP

With characters made and the stage set, it's time to launch! Consult the Basic Moves when you're ready to take action or the Playbooks when you want to pull something special off. If you're the Director, the Running The Game chapter has example enemies and advice to help you get things rolling, but don't be afraid to improvise and go off script. It's a one-shot, and nobodies going to be mad if you get things a little wrong. For a little extra help, see the [Setting](#) & [Mission Hooks](#).

THANKS & FAQ

A NOTE ON WORLDBUILDING

While this game doesn't include a pre-written setting you are expected to play, that's not to say these rules are completely free of any details outside the mechanics. These are intended to establish a feel for the game that will serve as a starting point for your own world—some core elements that you can build around. ‘Armour Astirs’ rather than mechs, ‘Channelers’ rather than pilots—these things are there to inspire and set an identity, and you should feel free to change all of them if the world you and your fellow players are exploring demands something different, or if you already have a setting you’re bringing these rules to.

Replacing magic itself is a little trickier, but it’s doable. Astirs and Ardents are already a pretty natural parallel to mechs and other combat vehicles, and Familiars are intended as an equivalent to drones or funnels/bits. For any weapon you can think of there’s probably some modern or sci-fi alternative that fulfils the same role, and you might try to convert the CHANNEL Trait into something that represents piloting skill, grit or luck instead of magic.

The artwork depicted in this book is the work of a group of artists with different ideas, experiences and histories with mecha fiction. It is my hope that it inspires and fills you with ideas about what the world in a game of Armour Astir **can** look like, not what it **has** to look like.

Armour Astir: Advent © 2019 by Briar Sovereign

All Rights Reserved. This publication may not be reproduced, resold or stored by any means without explicit prior permission.

MAIN CONCEPTS

— WHO YOU ARE —

In Armour Astir, you're rebels, mercenaries, and revolutionaries. You might be a Channeler, someone with the ability and training to control an Astir—a humanoid construct of magic and metal, some of which stand ten times the height of their pilots. You might be a Paradigm who gained that power through devout service, a Witch who made a pact in their darkest hour, or an Impostor who seized magic for their own at a cost. You might be the kind better suited to life outside of a suit of magical armour, of course: you might be a Scout trained by the Authority who left to fight back, an Artificer who grew up keeping things working around their hometown, or a Diplomat who made a name for themselves holding factions together.

Whoever you are, you represent something. This might be a small group, a company, or simply an ideology—but whatever it is, it is referred to as the Cause, and it is from your Cause that you receive direction and instruction. There are surely other factions involved in the struggle against the Authority, and it may be in your interests to align with them—but the Cause is what you belong to.

— WHO THEY ARE —

The exact nature of the Authority is up to you and everyone else at your table, but the Authority is generally an authoritarian group, usually in a grand position of power, that seeks to control and subjugate people who do not fall in line. There is no need for things to be entirely black and white in regards to the motivations of individuals, but as a general whole the Authority should represent something you as players are interested in fighting back against.

As with any other tabletop game, you should discuss what kind of content and themes you want to you want to tackle or avoid during play. There are different degrees and scales of evil, after all—and fighting a simpler, less subtle Authority is just as valid as fighting back against something more real and personal.

Also, unless you're feeling particularly unimaginative, they should have a better name than the Authority.

— WHAT YOU'RE DOING —

In Armour Astir, players typically rotate between Downtime (where they spend their limited free time to repair, rest, and rendezvous) and Sorties (where they leave the Carrier together to try and achieve a goal). Sorties themselves are usually a combination of several scenes—individually framed sections of action, like scenes in a movie or TV show—after each of which the player's risks are cleared. A larger goal, referred to as a Mission, is typically achieved over the course of a few Sorties.

A SORTIE MIGHT BE;

- Venturing out to defend the Carrier against attackers.
- Stabilising or destroying a dangerous magical artifact.
- Negotiating a peace treaty between two rebel groups.
- Something that could be done in one or two sessions of play: a short-term goal.

A MISSION MIGHT BE;

- Disrupting a major military operation.
- Liberating a city from the Authority.
- Dislodging a dragon and their minions from the region.
- Something that can be clearly split into multiple Sorties: a long term goal.

MAIN CONCEPTS

RESOLVING ACTIONS

In Armour Astir, actions are resolved using ‘moves’, which are rolls consisting of 2 d6’s and a single modifier, usually a Trait: one of 6 values that represent your character’s core attributes.

Generally, actions are resolved as such;

1. The Player explains to the Director what it is they want to do (and narrates action where appropriate)
2. The Director decides what move is appropriate.
3. The Player rolls 2d6 and adds the noted Trait.
4. The Director determines and narrates the outcome. Play continues.

ADVANTAGE & DISADVANTAGE

Sometimes you’ll be asked to roll with **advantage** or **disadvantage**. This means to roll 3d6 and take the highest or lowest 2 respectively. These do stack: if you have **advantage** from 2 sources, for example, you’d roll 4d6 and take the highest 2. Similarly, they cancel each-other out. If you have 2 **advantage** and 2 **disadvantage** on a roll, you have neither.

Tags on equipment and moves are common sources of **advantage** & **disadvantage**, but your Director might also impose either where it makes sense in a situation. The most dice you may roll at a time is 4, regardless of how much **advantage** or **disadvantage** you have.

CONFIDENCE & DESPERATION

Additionally, you might also sometimes be asked to act with **confidence** or in **desperation**. When acting with **confidence**, you are almost assured of your success: treat any dice result of 1 as a 6 instead. When acting in **desperation**, you have a slim chance to claim an unexpected victory: treat any dice result of 6 as a 1 instead.

Both are applied before you keep dice when rolling with **advantage** or **disadvantage**: you might, for example, be acting with **disadvantage** and **confidence** and roll two 1’s and a 3. You’d upgrade both those 1’s into 6’s first, leaving you with the lowest two of 6, 6 and 3 (9).

When you act in **desperation** and succeed, you may *deepen* a Hook.
When you act in **confidence** and fail, you may *loosen* a Hook.

TRAITS

Traits are measured from -3 to 3, and are as follows;

- DEFY, the ability to resist pressure and power through adversity.
- SENSE, the ability to read people and situations.
- CLASH, your prowess in combat, at distance or up close.
- TALK, your skill with the spoken and written word.
- KNOW, your ingenuity and cunning.

Certain playbooks also have the CHANNEL trait, representing magical abilities from various sources. CHANNEL is a special trait, in that it cannot be increased or decreased except through methods specific to your playbook. You cannot increase CHANNEL when taking an advancement.

When you make a character, you’ll set your Traits as you desire, on the conditions that;

- No Trait be **higher** than +2 or **lower** than -2.
- Your Traits add up to a total of +2.

In the future, you’ll get opportunities to improve your Traits as you play and earn advancements.

MAIN CONCEPTS

HOOKS

Hooks are short phrases that define how your character acts and thinks about the world and people around them. They might be **beliefs** about the world and their allies, **goals** they personally seek to accomplish, or **duties** they have taken up. Whatever their nature, Hooks are things that colour and inform the things your character does: a Hook might pull you to something new, where another might be something your character struggles to break free of. All players should write three Hooks during character creation, but don't worry about them being perfect: Hooks can be altered during play, based on how deeply you are caught on them.

Typically, Hooks can only be altered when you are prompted to do so: this might be by Downtime Scenes (see below), **Moves** you have access to, or so on. However, sometimes, your Hooks may be *deepened* or *loosened*. Acting in **desperation** or **confidence** and **BITING THE DUST** are the primary sources of this.

Deep Hooks cannot be re-written, forcibly or otherwise. *Loose* Hooks, on the other hand, can be re-written whenever you feel like it. If a *loose* Hook is *deepened* it returns to normal, and vice versa.

SPENDING HOOKS

When you take action that requires you to sacrifice, outgrow or otherwise conclude one of your Hooks, cross that Hook off permanently: you may then immediately take an advancement, and act with **confidence** if the Hook was *deep*.

CONFLICT TURNS & DOWNTIME

Between sessions, the tide of battle between the Authority and the Cause doesn't freeze in place. During the Conflict Turn, players direct the broader course of their struggle through playing out Conflict Scenes together: directing Challenges to each other through role-played scenes before discerning which side gets to pick an Outcome.

Afterwards, players return to their normal characters for Downtime: resting, recuperating and repairing the damage of their Sortie in similar Downtime Scenes before they venture out into danger once again.

TOKENS

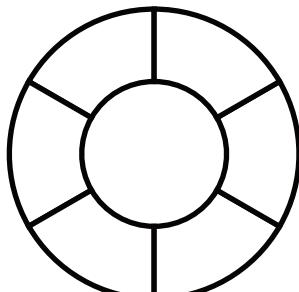

Tokens are narrative currency, gained and used during Downtime. You gain **tokens** when entering it, and lose any you don't spend at the end: so spend them!

During Downtime you'll spend your **tokens** to add to other player's Scenes and gain benefits for yourself. By default you receive 2 **tokens** for each Downtime, but several playbook moves and other sources give you extra **tokens** broadly or for specific use cases. Keep an eye out for them!

CLOCKS

Clocks are a measure of progress towards a goal or some other event, and are typically measured from 4 to 8 segments long based on complexity or other factors. What causes a clock to fill might differ depending on the clock—during Downtime players can advance **project** clocks by working on them during Scenes, for example—but there is a constant: when a clock fills, something happens.

Outside of project clocks, clocks will typically be more the Director's concern than any of the other players. For them, clocks are a handy way of measuring progress against objectives, literal ticking clocks for time pressure, and so on.

MAIN CONCEPTS

SPOTLIGHT

Whenever you fail a move (that is, you roll a 6 or below), you may take a point of Spotlight. Once you have 6 Spotlight, you may spend it at any time to take centre stage and immediately gain an Advancement. If you take a move, you may act with **confidence** to use it right now.

GRAVITY

GRAVITY clocks represent relationships and attachments you have with people and with groups. They're not measures of how much someone loves or hates you: they are countdowns to when a relationship is challenged, confronted or addressed. What this looks like is up to you and the other party—it might be an admission that you want a different kind of relationship, a commitment to things continuing as they are, or you accepting that the relationship should be over entirely—but it should be significant. GRAVITY clocks don't have to be positive: they are for star-crossed lovers just as much as fierce rivals meeting on the battlefield time after time. If it seems like the forces of the universe are dragging two people together often, it might be GRAVITY.

GRAVITY clocks are 6 segment clocks, and start empty. They are shared between two players or a player and the Director (representing a Director character or a faction/group), and represent their relationship and how those characters see each-other. When the clock advances, it advances for everyone involved: they are both sharing the same clock and the same progress.

You don't need an GRAVITY clock for everyone you meet—you should save them for your character's relationships you want to focus on and explore in play. For this reason, you may only be part of 3 GRAVITY clocks at a time, as well as 1 for your Rival should you acquire one. When you make a GRAVITY clock with one of the Director's **actors** or a faction/group, you're showing the Director that they're someone you want to engage with often in play.

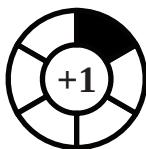

When you start a new GRAVITY clock, choose a word or short phrase that sums up the relationship, and give it a value of +1. Whenever you make a move involving the other party of a clock, you may add the clock's value instead of the normal Trait or value. If you do so, advance the clock. You can start a new clock whenever it feels appropriate.

FILLING GRAVITY CLOCKS

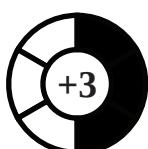

When a GRAVITY clock is filled, the relevant players have three choices;

- **Redefine** the relationship; you may take an advancement, start a new GRAVITY clock, and increase its value by 1 (to a max of +3).
- **Commit** to the relationship; increase its value by 1 (to a max of +3), and you may take an advancement. Circle the filled clock—it can't be filled any further. When you take action that ends this relationship, like sacrificing yourself for your beloved or betraying the person you're supposed to be loyal to, succeed as if you rolled a 10+ and cross out that clock forever.
- **Abandon** the relationship; you may take an advancement and erase the GRAVITY clock, freeing up a spot for a new one.

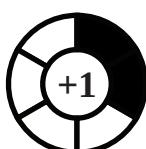

This change doesn't need to be shown the second the clock fills, but it should be represented in play either during the Sortie or during an upcoming Downtime Scene.

Estranged
siblings

MAIN CONCEPTS

DANGERS

When twenty-foot-long swords and magic guns are involved, injuries tend to be the severe kind. Thankfully, characters in Armour Astir are plenty capable of defending themselves—up to a point. Should enough problems, distractions or *dangers* arise, you may find yourself *defenceless*.

For players, being *defenceless* means your usual methods of avoiding harm aren't available to you. Where you might usually **EXCHANGE BLOWS** or **WEATHER THE STORM** to avoid a blow or dodge real consequences, that's no longer the case—your guard is down, your armour has a hole, etc. When you are *defenceless* and someone or something tries to harm you, you must roll to **BITE THE DUST**.

The *dangers* that make it harder to defend yourself come in two kinds: *risks* are temporary things that can be resolved during a Sortie (like having the low ground during a fight, being on fire, or being distracted), and *perils* are more permanent issues that must be solved during Downtime (like serious injuries to you or your Astir, being heartbroken, being exhausted). A *danger* to you is a *danger* to your Astir, and vice versa. For all intents and purposes, your Astir is an extension of yourself. Characters can be affected by a certain amount of both before they are *defenceless*:

- Players, Rivals and Main characters are *defenceless* at 3 *dangers*.
- Side characters are *defenceless* at 2 *dangers*.
- Extra characters are *defenceless* at 1 *danger*.

When a move or other effect says you take a *risk* or are put in *peril*, it means you're being given one of those *dangers*. Sometimes it will be specific exactly what you're gaining—e.g., ‘take a *risk* (outnumbered)’ means you add a *risk* named ‘outnumbered’ to your character sheet. If there's no brackets, it means you choose what the *risk* or *peril* is. Generally, if you're asked to take a *risk*, you decide: if you're put in *peril*, your attacker decides. Either way, you should feel free to discuss them with your Director.

If you want some examples, there's some given towards the end of this document. When someone is *defenceless*, it should be obvious—but individual *perils* and *risks* don't need to be so explicit.

Sometimes, *risks* might be linked to temporary situations rather than the effects of a move. The most common example would be if you're taking someone by surprise or attacking from a stealthy position: the situation puts them at *risk*, but the second you reveal yourself that *risk* is no longer relevant. An **actor** who is an extra, vulnerable at 1 *danger*, could be **STRUCK DECISIVELY** from stealth since the situation leaves them *defenceless*. With anyone else, you won't be so lucky.

If you take a *risk* but already have 3 *dangers*, replace one with a *peril*. If you would be put in *peril* but already have 3 *dangers*, replace a *risk* with it if you have one—otherwise, **BITE THE DUST** in **desperation** until the end of the Sortie. Further *dangers* just trigger **BITE THE DUST** instead.

BURDENS

A counterpart to *risks* and *perils*, *burdens* do not inherently put you in *danger* as long as they are managed properly. When you enter Downtime, you discard one of your **tokens** (used during Downtime to take part in Scenes and gain benefits) for each *burden* you have and describe what kind of upkeep or attention it requires. If you have the misfortune to earn three *burdens*, you lose your Downtime Scene—your obligations simply take precedence. Other players may still give you **tokens** to spend as usual, if they want to.

Burdens might represent long-term injuries or illnesses, but might also represent social circumstances or other duties that require regular attention. Your Diplomat might be *burdened* with the need to report to their superiors, or your Artificer might feel the *burden* of needing to personally run maintenance for all the crew's Astirs.

Burdens are primarily gained from **BITE THE DUST** and certain playbook **MOVES**.

SETTING UP

Setting up for a game of Armour Astir: Advent is simple, and consists of defining some key elements of the world you'll be playing in, building up the player characters, and figuring out what your first mission together will be.

SETTING THE STAGE

The very first part, and arguably one of the most important parts of playing Armour Astir, is setting up the world in which your game will take place. Other than the existence of a few things, like Astirs and other magical devices (which you and your group are free to re-fluff to suit your personal tastes, of course), this game doesn't assume much of your setting—meaning as a group you have a lot of freedom when coming up with the setting you'd like to play in. There are a few important things to iron out, however.

Your first job as a group will be to shape your game's Authority—the controlling force, like a ruling empire or military group that the players are aligned against. The Authority will be the central villain of your game (usually), and should be a group that the players are all interested in fighting against. It's probably a group of power-hungry, empire-minded bastards. For some examples, see: the Earth Federation / the Titans (*Mobile Suit Gundam* et al.), the Zaibach Empire (*Vision Of Escaflowne*), the Grineer (*Warframe*), the British Empire, etc.

The second will be to do the same for the Cause—the group of revolutionary factions to which the players belong, who supply them with equipment and support to further the fight against the Authority.

Finally, with the above done, players should pick the playbooks they are interested in playing, and use the ideas presented within to create their characters. Character creation doesn't happen in a vacuum - players should feel free to discuss their character ideas with each other and help flesh out an interesting cast.

You might want to also establish some more broad details about your world. Some less obvious things to consider might include;

- How is magical energy stored in your world? How effective is this storage?
- Do people move around your world often? What is the most common kind of transport?
- How common are Astirs? Would it be shocking to see one in a town or city?
- How long has it been since the last major conflict here? Are there many veterans?

THE AUTHORITY

As mentioned above, the Authority is the group (or coalition of groups, if that's your thing) that forms the primary antagonist for the players in Armour Astir. 'Authority' as opposed to 'villain' or 'foe' has a certain subtext, and that was intentional. The Authority should be a powerful, oppressive group, that as a whole cares more about stamping out opposition and furthering its own goals than doing what is best for its citizens or its neighbours. Individuals within the Authority need not entirely agree with it, and it may be more interesting for your story that in the smaller scale they operate in shades of grey, rather than being cartoon villains; but either way, it should be clear that as a group the Authority is something that the players are ready to tear down.

As with any other tabletop game, you should discuss what kind of content and themes you want to tackle or avoid during play. There are different degrees and scales of evil, after all; fighting a simpler, less subtle Authority is just as valid as fighting back against something more real and personal. When depicting fascist and imperialistic powers it is practically impossible not to also depict relatable, personal violence, and everyone at the table should be in agreement exactly where their boundaries and interests are in regards to what the Authority does.

CREATING THE AUTHORITY

While working out the exact depth and nature of the Authority and what they're up to is something your Director will need some time for, start by answering the questions below as a group to come up with the basics.

- *What do the people of the Authority value?*
- *What do the people of the Authority hate or disparage?*
- *What is hypocritical about the Authority?*
- *What is the Authority's primary goal? Why haven't they achieved it?*
- *What does the average person think of the Authority? Do they support/oppose it?*
- *How does the Authority look? What symbols and colours do they use? What materials?*
- *Does the Authority have a standard or mass-produced Astir? What is it like?*
- *What is the Authority called? Does the Cause call it something different, and if so-what?*

Functionally, the Authority is comprised of three Divisions (see Authority in the Director's section for info on how these work). As a group, you should come up with what these Divisions are and what they do. Every Division should have:

- A name, official or otherwise
- A type that determines their area of influence
- A few **actors** who lead or hold important positions within it

See The Authority for more info on the types of Divisions and what they do. These don't need to be all decided immediately, but the sooner the better. You might leave deciding the details of the Authority to the Director while the other players focus on the Cause, or all work the above out together.

If you just want to get started, you can work out a name and type but leave the **actors** until later, since they'll have plenty of time to develop during play.

If you want to work out the **actors** now, the Director should check out [Creating Actors](#) later in the book for an idea on what kinds of info is important to figure out.

SETTING UP

THE CAUSE

Opposed to the Authority is the Cause—a revolutionary group to which the players belong, comprised of a half-dozen or more smaller Factions. The players work directly for, and might even be in control of, one of these Factions.

The Cause has resources and information, and fights against the Authority on its own terms—but it relies on the players as its most trustworthy asset. The Cause's network of Factions provide the players and each other with assets and support, like Carriers and Astirs, and can assist them with repairing and acquiring new equipment—but there is an expectation that this aid will be repaid in turn by striking out at the Authority and furthering the Cause's aims.

As with the Authority, Factions and individuals within them might not see eye-to-eye on the Cause's goals and how they should be achieved—but as a whole, the Cause should be a group with whom the players align, even if the occasional representative is an asshole.

CREATING THE CAUSE

Again, as a group you should answer some questions to come up with the basics of who the Cause is;

- *Does the Cause have aims other than opposing the Authority?*
- *How much of a secret is the Cause?*
- *Where do the Cause's resources come from?*
- *What do people within the Cause disagree over?*
- *What does the average citizen think of the Cause? Do they support/oppose it?*
- *How does the Cause look? What symbols and colours do they use? What materials?*
- *Does the Cause have a standard or mass-produced Astir? What is it like?*
- *What is the Cause called? Does the Authority call it something different, and if so—what?*

As a group, you should decide on some basic information about the Cause. This might include answers to the above questions like a name or visual palette, but might also include a few characters who are important to the Cause at large rather than a specific Faction.

While the Director will flesh out most of the Factions (unless the group wants to do this together), the details of the one the players will belong to are up to them. Between you, you'll want to come up with a name for your Faction, official or otherwise, and choose a Faction type from the list in The Conflict Turn.

For other Factions, the type mainly determines what kind of consequences you impose on the Authority during the Conflict Turn when your attempts to oppose it succeed: for the players, it signals to the Director what kind of Sorties you're interested in playing.

For further information on Factions, see [Cause Structure](#).

CREATING PLAYER CHARACTERS

Finally, each player needs to make their character! Making characters in Armour Astir is simple, and ideally something you should all do together as a group. This helps everyone get a feel for the kind of characters you're making, and lets you make characters that immediately feel a little more coherent as a group. The main part of creating your character is choosing a 'playbook', which could be thought of like a 'class' or a character archetype within the world of your game. There's a few other things you must do too, though—the steps below will lead you through the process.

During play, you might suddenly find yourself in need of a new character. This might be due to the one you were previously playing dying, but for whatever reason you do need to make a new one, you follow the below steps as usual.

CHOOSE PLAYBOOK

Look over the playbooks and decide which one you want to play. Playbooks are split widely into two categories: Channelers (playbooks that use Astirs to fight) and Support (playbooks that have expertise outside of Astirs). It's ok if two people want to play the same one, but consider mixing up the group so everyone gets to feel a little unique.

CHOOSE NAME

Every unsung hero has a name, even if nobody learns it. Write a name for your character—if you're having trouble, consider working out what kind of naming conventions the people in the area your story will take place use.

CHOOSE LOOKS

Each playbook has a few choices for clothing, your overall look, and something else playbook-appropriate, like how your magic looks or how you fight. These are just suggestions to help you think about your character's appearance, so feel free to ignore them! Channeler playbooks also ask what you say when you launch your Astir. This can say a lot about how your character feels about Astir piloting and how seriously they take it, so put some thought into it!

CHOOSE GEAR

Each playbook has a few choices for equipment and items you have at the start of the game. Channeler playbooks all start with a tier III Astir (see The Carrier & Astirs).

SET TRAITS

You may set your Traits as you desire, on the conditions that;

- No Trait be **higher** than +3 or **lower** than -2.
- Your Traits add up to a total of +3.

CHANNEL, for the playbooks that have it, start at whatever value is listed on the playbook—you don't need to assign a value to it. For some playbooks, it will fluctuate during play.

These values are added to your roll when you make certain moves. It's a good idea to look at the basic moves, as well as the starting moves for your playbook, to get an idea of what Traits might be most useful to you.

CHOOSE MOVES

Each playbook starts with a few moves (as a Channeler, one of these will be built into your Astir), some of which are pre-picked, and some of which are your choice. Each playbook will list which ones you already have, if any, and will let you know how many to pick, so make sure you check!

SETTING UP

CHOOSE HOOKS

Finally, you should come up with up to 3 [Hooks](#) for your character. If you're just playing a one-shot (or are playing a character you won't return to for other reasons) and won't be bothering with Advancements, you don't need them but they might still help you decide how your character acts.

If you want, some extra things to consider;

- *Did you know each other before you started working for the Cause? If so, how?*
- *How did you first come into contact with the Cause?*
- *Have you been personally suffered under the Authority? If so, how?*
- *Where did you acquire the skills of your playbook? Where did the equipment come from?*

READY TO PLAY!

Once the above is all done, you're ready to play. You might want to have some further conversation as a group to flesh out your characters and the setting you're in (starting with the questions above), but if not, it's time to all turn and look expectantly at your Director for the setup to your first Sortie.

When it's time to do things, read on for information on the Basic Moves as well as some important Special Moves—more specifically, the move **LEAD A SORTIE!** When it's time for the action to begin, whoever is in charge should roll to **LEAD A SORTIE**, establishing how well things start off. This is similar to the engagement roll in some other systems, and is rolled with a different Trait depending on who did the planning. You can find more detail under [Special Moves](#).

BASIC & SPECIAL MOVES

BASIC MOVES SUMMARY

The Basic Moves are moves everybody has access to, regardless of their chosen playbook. You use Basic moves to do most things, unless your playbook provides a move that is more specific to the situation you're in. Below is a quick summary of them, followed by some more detailed info with examples of their use.

WEATHER THE STORM

When you **WEATHER THE STORM** to do something safely under pressure, roll;

- +DEFY to dodge, tough it out or strong-arm your way through.
- +KNOW to make it through with quick thinking or the ace up your sleeve.
- +SENSE to notice quiet cues, signs of danger or bad vibes before it's too late.

On a 10+, you manage to make it to safety.

On a 7-9, you succeed but at some cost: it'll keep you occupied longer than you thought, the Director will ask you to make a difficult choice, or you'll burn a point of Spotlight as you take dramatic action.

READ THE ROOM

When you **READ THE ROOM** to get insight on your situation, roll +SENSE;

On a 10+, hold 3. On a 7-9, hold 1, and spend it 1-for-1 to ask the following questions. Your hold lasts until you leave the current situation or it changes significantly.

- | | |
|--|--|
| • Who has the upper hand here? | • What is x's approach ? |
| • What is being overlooked or obscured here? | • How is x at <i>risk</i> or in <i>peril</i> ? |
| • Where do my Hooks pull me here? | • Where can I find x? |
| • How does x really feel? | |

On a failure, you may ask one of the above questions immediately, but the answer creates a problem or puts you in danger.

Roll with **advantage** when you act on the answers to what you've asked.

DISPEL UNCERTAINTIES

When you **DISPEL UNCERTAINTIES** by clarifying the unknown or answering a question, roll +KNOW;

On a 10+, the Director will tell you something directly useful you know about the situation or subject at hand.

On a 7-9, the Director will tell you something potentially useful, but it is up to you to discern how. The Director might ask you to explain how you know that information, or where you learned it.

HELP OR HINDER

When you **HELP OR HINDER** someone to influence their attempts to do something, roll;

- +1 if you spent meaningful time together before this Sortie
- +1 if they've **HELPED OR HINDERED** you previously this Sortie
- +1 if they're part of one of your Hooks

On a 10+, they take **advantage** (help) or **disadvantage** (hinder) to their roll. On a 7-9, as above, but you become entangled in the consequences of their actions, and possibly cause them.

BASIC & SPECIAL MOVES

WEAVE MAGIC

When **WEAVE MAGIC** to do something taxing with your power, roll +CHANNEL;

On a 10+, you manage to channel power the way you desired without ill effect.

On a 7-9, you succeed, but your invocation is twisted in an unexpected and dangerous way.

COOL OFF

When you take a moment in safety to **COOL OFF** or help someone else do the same, declare a *risk* you want to get rid of and roll whatever Trait seems most appropriate;

On a 10+, you/they erase a *risk* or untick ‘overheating’ from an Astir.

On a 7-9, as above, but your moment of safety is interrupted.

EXCHANGE BLOWS

When you **EXCHANGE BLOWS** with foes capable of defending themselves, roll +CLASH or +TALK, whichever is more appropriate, and advance a GRAVITY clock if you have one;

On a 10+, either your opponent takes a *risk*, or you take a *risk* and put your opponent in *peril*.

On a 7-9, both you and your target are forced to take a *risk*.

STRIKE DECISIVELY

When you **STRIKE DECISIVELY** against someone who is *defenceless*, roll +CLASH or +TALK, whichever is more appropriate;

On a 10+, you strike true. Director characters are killed, forced to retreat or otherwise removed as a threat as per the fiction. Player characters should bite the dust.

On a 7-9, you succeed as above, but choose 1;

- You overreach or underestimate—take a *risk*.
- You waste ammo or words, losing use of a weapon until you can re-arm, or losing the weight of some bargaining chip or piece of leverage.
- You strike carelessly, causing collateral damage beyond your expectations.

BITE THE DUST

When you’re caught *defenceless* or risk harm so severe you might **BITE THE DUST**, roll +DEFY;

On a 10+, they miss, hesitate, or you’re saved by sheer luck—you rally, and clear a *risk* if you have one.

On a 7-9, retreat from the Sortie safely, or take a *peril*.

On a fail, that strike sure was *decisive*. Decide with your Director the consequences of what has happened to you—what was damaged? What have you lost? Who and what is affected by your defeat?

If you survive, you are changed by your defeat. As well as the above, choose one;

- Deepen all of your Hooks, as you clutch your ideals tighter and tighter.
- Loosen all of your Hooks, as you lose faith in that which drives you.
- Take a *burden*, as you are saddled with some lingering injury, duty or obligation.
- Choose a new playbook. Keep what moves you and the Director agree are truly part of your character, and discard the others. Replace them with the starting moves for your new playbook. You do not gain its starting equipment.

HEAT UP

When you push your Astir to its limits and start to **HEAT UP**, you may tick ‘overheating’ to retry a roll. The original results are discarded, and you must take the second roll even if it’s worse.

BASIC & SPECIAL MOVES

WEATHER THE STORM

When you attempt to ignore the 'witty' barbs of ambitious politicians, try and walk across a thin wet beam as thunder booms overhead, or otherwise do something under significant pressure, you're attempting to **WEATHER THE STORM**. When you do so, roll;

- +DEFY to dodge, tough it out or strong-arm your way through.
- +KNOW to make it through with quick thinking or the ace up your sleeve.
- +SENSE to notice quiet cues, signs of danger or bad vibes before it's too late.

On a 10+, you manage to make it to safety.

On a 7-9, you succeed but at some cost: it'll keep you occupied longer than you thought, the Director will ask you to make a difficult choice, or you'll burn a point of Spotlight as you take dramatic action.

If you're doing something that doesn't fall under another more specific move and there's a chance something could go wrong for you, your Director will probably ask you to **WEATHER THE STORM**. As long as there's a 'storm', i.e something that could hurt or inconvenience you, this move should cover it if nothing else does. Just make sure you pick the correct Trait! It's easy to look at DEFY and KNOW and think they cover physical and mental resistances respectively—but you could DEFY someone's provocations just as easily as you could KNOW how to quickly reroute magic from your Astir's weapons into a defensive spell. Similarly, you might SENSE a volley of incoming missiles early enough to just step aside instead of using DEFY to dodge them once they're already headed right for you.

DIRECTOR NOTES

On a result of 7-9, they still manage to pull through—but the storm is a bit fiercer than they were ready for. It's ultimately up to you which of the three drawbacks you offer, but be willing to listen to your players if they have something in mind. Obviously, you can't ask them to burn a point of Spotlight if they don't have any.

Just remember: whatever you impose on them, it shouldn't invalidate the fact that they still succeeded at whatever they were trying to do. If they're avoiding fire, taking extra time doesn't mean they were too slow—it means there were even more attacks to dodge, etc.

In an earlier version of this game, a 7-9 had the possibility of imposing a *risk*, but I felt this too easily led to recursive situations where you were trying to avoid taking a *risk*, only to end up partially succeeding... and taking a *risk*. As such, I've taken that option off of the table.

EXAMPLES OF WEATHERING THE STORM:

Perrin the Witch is trying to cross the field of battle in his Astir, but finds himself caught in crossfire. There's dangers both magic and mundane flying through the air from all angles, but Perrin hopes he can focus on evading the bigger threats as he moves across. He rolls a 4, and I get to declare the outcome. While attempting to dodge a huge bolt from a trebuchet, he's caught by a wayward beamrifle shot. Because he's in an Astir, I decide to damage it rather than him directly, and the blast tears a chunk out of its right leg. Perrin notes that he's in *peril* (damaged leg), and grits his teeth: it'll be much harder to get anywhere now.

Prim, an Arcanist, is trying to reload his beamrifle. This normally wouldn't be any hassle at all, but he's trying to do it while a nearby squad pelt him with boltrifle fire. Not only is it distracting as their bolts fly past his vision and clatter against the Astir's plating, if one hits him in the wrong place it might actually cause some damage. He rolls an 8, and I offer him an ugly choice—does he dash into the open to reload, taking the *risk* (exposed), or does he hunker down and make the reload where he is, missing something he might've spotted otherwise?

Elias, a Scout, is being charged at by a few men armed with spears. Rather than stand there and be horribly stabbed, Elias instead decides they want to side-step the spears and vault over one of their foes. On a 7-9, I might consider having a spear snag their clothing, tearing some of their equipment onto the floor, or have them land badly after vaulting. They roll a 10 and succeeds, so instead they perform the manoeuvre without a hitch and land on their feet behind the surprised footmen.

READ THE ROOM

When you're trying to figure out which side a battle is in favour of, whether or not a holding is defendable, or are otherwise trying to get insight on your situation, you're trying to **READ THE ROOM**. When you do so, roll +SENSE;

On a 10+, hold 3. On a 7-9, hold 1, and spend it 1-for-1 to ask the following questions. Your hold lasts until you leave the current scene or it changes significantly.

- Who has the upper hand here?
- What is being overlooked or obscured here?
- Where do my Hooks pull me here?
- How does x really feel?
- What is x's approach?
- How is x at *risk* or in *peril*?
- Where can I find x?

On a failure, you may ask one of the above questions immediately, but the answer creates a problem or puts you in danger.

Roll with **advantage** when you act on the answers to what you've asked.

If you're trying to learn more about the situation you're in, chances are you're trying to **READ THE ROOM**. There's a lot of things this could look like—gazing stoically out onto a raging battlefield, listening closely to a pair of arguing politicians, going over a shipping manifest you've found in an Authority camp—and even if you fail, you still learn something. It's just going to get you in trouble. Unless you fail, you keep your hold as long as you stay in the current situation or scene. No need to spend it quickly.

DIRECTOR NOTES

Don't be too strict with your players on what constitutes their scene changing or ending. Respect the risk they've taken in trying to learn more about their situation, and let them put what they learn into use within reason. When in doubt, lean on letting them keep it. Whenever someone asks a question from **READ THE ROOM**, you get to advance and complicate the situation at hand, and that's probably always going to be interesting. When someone rolls a 6 or below on this move, they basically get to pick their poison. If they ask who has the upper hand, it probably isn't them. If there's anyone *defenceless* around, it might be someone they'd rather see make it through. If something is being overlooked, it's already too late. Be inventive.

EXAMPLES OF READING THE ROOM:

Anya, a Diplomat, is mediating a discussion between ambassadors from two smaller factions. She expected things to get heated, but Fran, the usually more demanding of the two, is conceding minor points at every turn. I suggest she **READ THE ROOM** to represent the attention paid to what has been said so far, and she rolls a 7-9. She decides to ask 'How does Fran really feel?'. I explain that, given what she knows about Fran, there is no way he'd accept all these concessions: it's likely he has an ulterior motive, and is here solely for appearances.

Torres, the group's Paradigm, skids to a halt on a crowded battlefield, and uses vis elevated position in an Astir to assess the situation. Ve reads the room and rolls... a 4. Ve asks 'What is being overlooked here?', and the answer strikes ver in the back: there's a squad armed with a beamrifle hiding on the ridge behind ver!

Kai, a Diplomat, has broken into a small military base, and is snooping around for useful intel. Given that he's looking for information on bigger picture things than this one camp, there are some questions that don't have obvious answers. If I had something specific in mind to reveal here, I might have him **WEATHER THE STORM** instead to find it before he is discovered. But I don't, so instead I ask him to roll as usual and interpret 'here' to mean the group's Sortie, as what he's doing is likely to give him broader information. He rolls an 11, and chooses to save his hold until he returns to his friends. While he's technically leaving this scene, the information he's gained is still pertinent outside of it, so I let him keep his hold.

BASIC & SPECIAL MOVES

DISPEL UNCERTAINTIES

When you offer an answer to a difficult question, rack your brains for what you know about a topic, or explain to everyone what mysterious thing you've encountered is, you are **DISPELLING UNCERTAINTIES**. When you do so, roll +KNOW;

On a 10+, your Director will tell you something directly useful you know about the situation or subject at hand.

On a 7-9, your Director will tell you something potentially useful, but it is up to you to discern how. Your Director might ask you to explain how you know that information, or where you learned it.

DISPEL UNCERTAINTIES is pretty straightforward as far as moves go. Confronted with something unknown that you want to clarify? **DISPEL UNCERTAINTIES**. Need to see if you know about an Astir model? **DISPEL UNCERTAINTIES**. On a 7-9, what you know isn't directly useful, but it's related—and still useful if you can figure out how to use it.

DIRECTOR NOTES

As above, this isn't a move you need to think too hard about. On a 10+, hand them what they wanted to know, or at least something they can clearly use. On a 7-9, go a little adjacent. Give them something close, or something they can make their own conclusions from. On a 6-, make a move as usual.

EXAMPLES OF DISPELLING UNCERTAINTIES

The group is meeting a mysterious faction for the first time, and is introduced to their leader. Scour, a Witch, asks if he recognises her. He rolls to **DISPEL UNCERTAINTIES**, and gets a 10—he knows exactly who she is! It's a member of the royal family he remembers meeting some years prior.

Prim, an Arcanist, is fighting a mysterious new Astir that has turned up on the battlefield. They explain how they think back to a codex of Astir designs they looked through recently which might offer some information, and they roll. They get an 8, and I give them some potentially useful information. The new Astir wasn't in that codex, but Prim can tell from some of the design elements that it was designed by Rosegold Factoria, a faction in their campaign.

Merin, the party Artificer, is overseeing some repairs to their Cruiser, *The Planted Standard*. It wants to speed things up, so it asks me if it knows a safe way to make those repairs faster than usual. It rolls a 6, and I explain to it how it would be *very* safe if it re-purposed the energy channels from the Standard's main gun and used them to make the repairs. Or, that's what it thinks, at least.

BASIC & SPECIAL MOVES

HELP OR HINDER

When you attempt to lend aid to someone or interfere with their ability to make a roll, you are trying to **HELP OR HINDER**. When you do so, roll:

- +1 if you spent meaningful time together during Downtime
- +1 if they've **HELPED OR HINDERED** you previously this Sortie
- +1 if they're part of one of your Hooks

On a 10+, they take **advantage** (help) or **disadvantage** (hinder) on their roll. On a 7-9, as above, but you become entangled in the consequences of their actions, and possibly cause them.

If someone else is making a move, and you're trying to do something to either help them or to get in their way, your Director will probably ask you to **HELP OR HINDER**. Succeeding lets you pass them a bonus to their roll, but on a 7-9 you get caught up in the results of the move. If someone gets hurt, it's probably you, etc.

HELP OR HINDER asks you to roll without a trait, adding modifiers based on your interactions with that character. If you have a GRAVITY clock with the target character, however, you can substitute that as usual.

DIRECTOR NOTES

This isn't a particularly complex move, so it shouldn't often cause you any trouble. If someone is clearly trying to prevent or facilitate someone else doing something, this is what they should roll. On a 7-9, involve them in what happens afterwards, and feel free to make it their fault if you want to.

EXAMPLES OF HELP OR HINDER:

Fau, a Witch, is striding into battle alongside zir allies. Ahead of zir, Brennan is tangling with a pair of enemy Astirs. Brennan is going to **EXCHANGE BLOWS** with them, and Fau decides to help out by giving covering fire to zir friend. Ze rolls a 6, +1 for having spent a scene with Brennan during downtime, for a final result of 7. This allows zir to give **advantage** to Brennan for his roll. He succeeds, and all is well.

Seven is not so lucky, however. Having rolled a 9 to help Matrice avoid a serious blow from their would-be-rival and passed them **advantage**, Seven is in harm's way—and when Matrice rolls a 5 on their **BITE THE DUST**, I decide that their intervention puts them in the path of the blade, rather than Matrice.

Serrah, a Captain, is watching over a battle from the helm of their Carrier. Down below, Merin is making use of its Artificer abilities to quickly construct a foothold, from which it can assess the state of the fight. Serrah offers her assistance—from this high up, and with the capabilities of the Carrier, she could definitely help pick out things on the battlefield. I ask her to **HELP OR HINDER**: she adds her GRAVITY clock with Merin and rolls an 11, allowing her to offer Merin **advantage** without putting herself on the line. Merin then, unfortunately for it, rolls a 6. There will be repercussions—but Serrah won't be part of them.

BASIC & SPECIAL MOVES

WEAVE MAGIC

When you invoke your magic to crumble a bridge, attune to mystical orbs at the centre of the galaxy, or otherwise do something taxing with your power, you're attempting to weave magic. When you do so, roll +CHANNEL;

On a 10+, you manage to channel power the way you desired without ill effect.

On a 7-9, you succeed, but your invocation is twisted in an unexpected and dangerous way.

In Armour Astir, magic is typically channelled through an Astir, imbued into potions through alchemy, or forged into objects by enchanters and artificers. More direct uses, in the form of spells and such, have fallen out of use somewhat. When you try to twist your magic ability into desired results, then, you're not picking a spell from a list—you're **WEAVING MAGIC**. It's tiring to use your magic directly in this way: expect to take a *risk* or even be put in *peril* if you test yourself in this way multiple times during a Sortie.

DIRECTOR NOTES

Like some of the others, this is a pretty straightforward move. If they're trying to do something with their magic outside the usual purview of controlling their Astir, and you think it's something within their ability, they're trying to **WEAVE MAGIC**. Overuse of **WEAVE MAGIC** should visibly exhaust characters, and make it tough for them to operate. This is the trade-off for how wide and varied the uses of this move could be.

EXAMPLES OF WEAVE MAGIC:

Lamina, an Arcanist, is on foot, trying to get back to their Astir that they have been separated from. They encounter some soldiers on the way back, and not being trained in using her magic for direct combat, Lamina decides she wants to try teleporting herself the short remaining distance to her Astir. I ask her to **WEAVE MAGIC**, and she rolls an 8. I narrate how her sudden burst of unfiltered magic is easily picked up by a sensory ritual over the area, which magically ‘tags’ her Astir as a target—as a result, I ask her to take a *risk*, suggesting ‘targeted’. She’s at her mech, but it’s going to be tougher to escape now there’s an ethereal bulls-eye painted on her.

Strata, the party Paradigm, wants to try and produce a magical shield to protect his allies while they make some quick repairs. This feels like something he could do, so I ask him to **WEAVE MAGIC**. He rolls a 10+, so it happens just the way he wanted. It’s a little exhausting, but sure enough a white-gold sheet of magical force spreads out from his fingertips, lasting as long as he concentrates on it.

Plana is trying to collapse a bridge their group has just travelled over, to prevent anyone from following them. As an Artificer, Plana doesn’t usually have a CHANNEL Trait, but they have the **ARCANE GENERATOR** move which gives them one. Plana describes how they try to send waves of magical force through the bridge to shake it apart, and I ask them to roll **WEAVE MAGIC**. On a 7-9, I might describe how their magic spills dangerously out, causing a localised earthquake that shakes more than just the bridge to pieces.

BASIC & SPECIAL MOVES

Cool Off

When you attempt to vent heat from an Astir, to calm yourself from spiralling emotions, or to otherwise take a few minutes to fix something about your or someone else's situation, you're trying to **COOL OFF**. When you do so, declare a risk you want to get rid of and roll whatever Trait seems most appropriate;

On a 10+, you/they erase a *risk* or untick 'overheating' from an Astir.

On a 7-9, as above, but your moment of safety is interrupted.

Doing things can be pretty stressful, especially when those things include fighting, getting hurt, or talking to people. Many actions in Armour Astir can require you to take *risks*, and while it's easy to imagine getting rid of these with many other moves (getting rid of 'outnumbered' with **EXCHANGE BLOWS**, using **READ THE ROOM** to clear 'surprised', etc) sometimes it won't always be that clear, or might be something you can't fix without a minute to breathe.

For those things, **COOL OFF** acts as a catch-all risk removal move. What using it looks like can differ a lot: it might be taking a quiet moment to centre yourself, talking an ally down from an emotional peak, or venting heat buildup from your Astir—heat represented by the 'overheating' tick gained from certain Channeler moves—which also might look different depending on how your Astir is designed. Maybe your Astir collects heat in canisters that it can eject, or maybe you have a maintenance ritual you cast that disperses excess energy from it.

DIRECTOR NOTES

The important thing about **COOL OFF** is that it takes a little time. While you make this move, you're not fighting, you're not running, and you're not paying close attention to what's going on. Maybe it's only a minute or two, but that can be a big opportunity for foes - so characters should try to make themselves some breathing room before they take a breath. You can choose what Trait you use when **COOLING OFF**, but it should match what you're doing. If you're trying to flush a hex out of your Astir's systems, it'd be **+CHANNEL**. If ice has frozen over the finger joints of your Astir, you can't chip it off with **+TALK**—it'd be **+DEFY**, or maybe **+CLASH**.

EXAMPLES OF COOL OFF:

Ray, a Scout, has just seen vis ally Luxx narrowly dodge a bolt of lightning. The close call disrupted a sensory ritual, giving them the *risk* (blinded). Ray has the Scout move **PATCH JOB**, and ve decides to move in and try to clear up the disruption for Luxx. Ve describe how ve scales up the Astir's side and sets to work replacing some shattered reagents. I ask ver to roll to **COOL OFF** with **+DEFY** since this is a pretty routine fix done quickly, and ve rolls a 9, attracting unwanted attention as a result. A second bolt of lighting sears overhead: they've both been spotted!

Fau has just dispatched a pair of enemy Astirs but caused zirs to overheat in the process. With zir sensory chimes picking up new contacts incoming, ze decides to do something about that heat problem. Ze describe how zir Astir has a series of pods full of frosty, alchemical liquid attached to it, and ze activate one to **COOL OFF**. Ze rolls an 11 after adding zir **+CHANNEL**, which is a total success. The liquid frost washes through zir system, and ze removes the 'overheating' tick.

Merin, an Artificer, currently has the *risk* (entangled) after being caught up in some magical plants. If they were in a hurry they might have tried to **WEATHER THE STORM** to escape, but they're alone and otherwise safe - so they decide to take their time cutting themselves free. They roll to **COOL OFF** with **+CLASH**, and unfortunately only get a 5. The more they cut, the more these vines seem to trap them, and they end up taking too long. A flying enemy ardent sweeps overhead and spots them - if they weren't in a hurry before, they sure are now.

BASIC & SPECIAL MOVES

EXCHANGE BLOWS

When you charge at a foe with your blade, engage someone in debate or try to provoke them, or otherwise act against someone able to defend themselves, you are attempting to **EXCHANGE BLOWS**. When you do so, advance a GRAVITY clock if you have one, and roll +CLASH or +TALK —whichever is more appropriate;

On a 10+, either your opponent takes a *risk*, or you take a *risk* and put your opponent in *peril*.

On a 7-9, both you and your target are forced to take a *risk*.

When you go toe-to-toe against someone capable of defending themselves, you're **EXCHANGING BLOWS**. This move is used to wear foes down before **STRIKING DECISIVELY** to deal with them for good —whether you're doing it with +CLASH and physical harm, or +TALK and your words. When you're actually fighting, it's important to consider what weapon you're using. You can't hit someone far away with a *melee* weapon, for example, or shoot someone close up with a *sniper* weapon. When it comes to using +TALK, it's worth keeping in mind that most conversations are probably just that: conversations. But when there is conflict or you're trying to get something, it might instead be **EXCHANGING BLOWS**.

DIRECTOR NOTES

When players are trying to **EXCHANGE BLOWS**, make sure to keep in mind the methods and weapons they are using, as well as who they're using them on. There's lots of variables that could come into play, so don't be afraid to offer adjustments to the roll based on the situation. If players are **EXCHANGING BLOWS** with +TALK, it should go without saying that their choice of weaponry probably doesn't factor in, unless they're using it to intimidate someone.

If a player is trying to harm someone who isn't trying to harm the player back but is otherwise still capable of evading or defending themselves, they still need to **EXCHANGE BLOWS**. While they're not in direct danger there's still plenty of other reasons they might need to take a *risk*—over-committing to chase an agile foe, getting mad they they can't land a solid hit, and so on.

If a player wants to continue **EXCHANGING BLOWS** with someone who is *defenceless*, let them, but it should be clear they are toying with someone who is basically done. It should seem cruel.

EXAMPLES OF EXCHANGE BLOWS:

Caryx, an Arcanist, wants to engage an enemy Astir that has rushed up to block their path. They describe pulling out the greatsword their Astir is armed with, and launching into melee. This sounds like **EXCHANGE BLOWS** to me, which they roll. They get a 10+, and take the option 'your opponent takes a *risk*'. I narrate how their foe boosts backwards suddenly to evade the blow, leaving them unsteady on their feet, and I add the *risk* 'unstable' to their sheet.

Juniper is blade-to-blade with aer Rival, Sequoia. They have already traded *risks* a few times, and Junipers player continues the fight, rolling to **EXCHANGE BLOWS**. Ae rolls a 7, meaning both aer and Sequoia have to take another *risk*. Juniper elects to take the *risk* 'distracted', describing how ae's so focused on Sequoia that ae could miss something else. I give Sequoia the 'disarmed' *risk* as the blade is knocked from her hands.

Frankly Darling is trying to convince an engineer they've bumped into in an enemy base that they're supposed to be there. They might **WEATHER THE STORM** to avoid suspicion this once, but they want to not have to worry about this engineer for the rest of the scene, so we **EXCHANGE BLOWS**. They roll a 5 —as it turns out, they're not that good a talker.

STRIKE DECISIVELY

When you're lining up the perfect shot against an opponent who can't defend themselves, delivering a scathing dismissal of their character using irrefutable fact, or otherwise engaging someone who is defenceless, you are **STRIKING DECISIVELY**. When you do so, roll +CLASH or +TALK, whichever is more appropriate;

On a 10+, you strike true. Director characters are killed, forced to retreat or otherwise removed as a threat as per the fiction. Player characters should **BITE THE DUST**.

On a 7-9, you succeed as above, but choose 1;

- You overreach or underestimate—take a risk.
- You waste ammo or words, losing use a weapon until you can re-arm, or losing the weight of some bargaining chip or piece of leverage.
- You strike carelessly, causing collateral damage beyond your expectations.

If you're trying to kill someone you're fighting or to otherwise do something serious enough to remove them from the situation at hand, and it's possible to do so, you're trying to **STRIKE DECISIVELY**. This doesn't necessarily need to be something that causes actual harm to the target, and in many cases, like when you're using +TALK, it's likely physical harm might not be involved. You can't call someone's shitty ideology out so hard that they die (unless your Director says you can, in which case: hell yeah).

DIRECTOR NOTES

As with **EXCHANGE BLOWS**, a player cannot **STRIKE DECISIVELY** if they aren't at the right range for the weapon they're using. It's also hard to lay into someone if they're too far away to hear you (though, it is of course possible to damage someone's reputation or assets by talking about them, rather than to them). When battling it out with +TALK, a 10+ will typically look like getting what you wanted out of the conversation rather than them being owned so hard that they burst into flame. This might be convincing them of something, intimidating them into a course of action, winning an argument, etc.

Central to this move is the target being *defenceless*. If a player is trying to finish off someone that isn't *defenceless*, they aren't making this move—they're being overconfident, and giving you a good opportunity to make a move of your own.

EXAMPLES OF STRIKING DECISIVELY:

Mura, a Scout, spots an enemy bearing down on her friend Ophelia, a large axe drawn. Mura thinks the fact that it is distracted by its fight with Ophelia makes them *defenceless* to her, and she takes aim with her marksman bow, intending to kill them. I know they aren't actually that distracted by their fight, and actually have room for another *danger*. I explain this to Mura, and describe how her target sidesteps the attack, before returning fire with a hand-crossbow. Things are going to get rough for Mura.

Cirrus the Diplomat has been trying to convince a guard to let them into a restricted area. Having already worn them down a little, Cirrus delivers the coup de grace ("You know, I could put in a good word with your superiors...") and rolls to **STRIKE DECISIVELY**. They get an 8, and choose to waste ammo or words—I describe how now none of the other guards will buy that line until you actually do put in a good word for this one, since they'll talk to the others about it. It's still a success though, so the guard is removed as a threat, which in this case just means they'll stand aside and let Cirrus through. The guard doesn't suddenly die or anything. But they might've.

Damocles, a Scout, is working in tandem with his friend Erin to take out a service ardent. Damocles climbed onto its back while Erin distracted it, and wants to try and destroy it with a bomb. The ardent's pilot is *defenceless*, but Damocles only rolls a 6. I decide the charge is faulty, and that it goes off early, sending him flying back down to the floor painfully, giving him the *peril* (*burned*).

BITE THE DUST

When something dangerous slips through your defences, you're caught off-guard, or someone delivers those perfect words to tear you down, you're at risk of biting the dust. When you do so, roll +DEFY;

On a 10+, they miss, hesitate, or you're saved by sheer luck—you rally, and clear a *risk* if you have one.

On a 7-9, retreat from the Sortie safely, or be put in *peril*.

On a fail, that strike sure was decisive. Decide with your Director the consequences of what has happened to you—what was damaged? What have you lost? Who and what is changed by your defeat? If you survive, you are changed by your defeat. As well as the above, choose one;

- Deepen all of your Hooks, as you clutch your ideals tighter and tighter.
- Loosen all of your Hooks, as you lose faith in that which drives you.
- Take a burden, as you are saddled with some lingering injury, duty or obligation.
- Choose a new playbook. Keep what moves you and your Director agree are truly part of your character, and discard the others. Replace them with the starting moves for your new playbook. You do not gain its starting equipment.

DIRECTOR NOTES

When a player is *defenceless* as a result of having three *risks* or *perils*, they're in real danger. When someone threatens them with the intent to finish them off—i.e, when they would fictionally be **STRIKING DECISIVELY** rather than **EXCHANGING BLOWS**—that player should **BITE THE DUST** in response. You still have agency to make moves (you could **EXCHANGE BLOWS** as the aggressor, for example, potentially incurring the penalty for having more than 3 *dangers*), but any time someone specifically ‘attacks’ you this move is triggered.

Failure on this move should be a conversation between you and the player, but you shouldn't feel the need to have this conversation there and then. Feel free to go with something ambiguous in the short term—a pair of Astirs dashing out of sight but only one returning, a bloody trail left leading off somewhere unseen, an escape pod landing heavily—and determine the outcome once the action of the Sortie dies down.

EXAMPLES OF BITE THE DUST:

Min-seo, a Captain, is commanding the crew of her Carrier against a huge elder dragon. Things are going badly: covered with burns, streaked by talon-marks and gripped by fear, Min-seo and her crew are *defenceless*. The dragon cuts them off, and launches one last burst of flame towards the Carrier's bridge. It's time to **BITE THE DUST**, but lucky for Min-seo (and her crew) she rolls a 10. She describes how the crew pulls off a miraculous manoeuvre, dropping the Carrier out of the sky for a moment to evade the attack, and she removes the *risk* (*afraid*) as everyone cheers.

Aidah, eir group's Paradigm, was ambushed by a group of Astirs. Between being outnumbered and taking a few extra *risks* while trying to even the odds, e is *defenceless*. It's too late to **WEATHER THE STORM**: If Aidah wants to get out, e needs to make sure e doesn't **BITE THE DUST**. E rolls an 8, and I give em the choice: retreat safely from the Sortie, or be put in *peril*. E decides to take the *peril*, so while e escapes to regroup, e does it under fire and a rayrifle shot shears through eir right shoulder joint, replacing one of eir risks with the *peril* (*destroyed arm*).

Scour is in a bad way. His Astir is damaged, disarmed, and he's *defenceless*. His opponent, channelling a mysterious prototype Astir, isn't interested in giving him mercy, but Scour's not backing down. He rushes back in and risks **BITING THE DUST**. He rolls the dice: it's a 3. It's early in the campaign and Scour's player still has things they want to explore with them in play, so we agree that they manage to eject from their Astir before their foe gets a decisive slash in, destroying it completely. They're alive, but shaken, and will need rescuing from the battlefield. They decide to *loosen* all of their Hooks, representing their courage and confidence taking a major hit.

BASIC & SPECIAL MOVES

GROUP MOVES

When everyone would be performing the same move (like all **WEATHERING THE STORM** to get away from a big blast of magic), or if multiple people want to help out with something (since usually only one person can **HELP OR HINDER** a move), you should instead make it a group move.

When performing a group move, the person participating with the lowest relevant trait makes the roll, but anybody participating counts as doing so—thus, any bonuses to rolls they have, like **advantage** or hold they can spend, apply to the group move. A chain is only as strong as its weakest link, but good teamwork can shore up any weaknesses.

Everyone participating in a group move may advance GRAVITY clocks with other participants if they have them.

SPECIAL MOVES SUMMARY

There are a few other moves that don't fit into the above categories. These are **LEAD A SORTIE**, which is rolled once at the beginning of each Sortie to determine how the initial engagement goes, **SUBSYSTEMS** which is a move usable by any Channeler playbook, and **B-PLOT** which is a move usable by any Support playbook.

LEAD A SORTIE

When it's time for action and you **LEAD A SORTIE**, decide who planned the mission and roll;

- +KNOW, if you're leading with wits or following a clever plan.
- +CREW, if it was someone else aboard.
- +DEFY, if you're heading into danger blind.

On a 10+, you make it to the action unscathed. On a 7-9, the crew stumbles, misses something important, or is unprepared for what they meet.

SUBSYSTEMS

When you activate your Astir's **SUBSYSTEMS**, spend 1 Power to re-activate an expended [Active] Astir part and use it again.

B-PLOT

When you take part in the **B-PLOT** rather than be involved in a Sortie, name one or two Director characters that accompany you and hold 3. During the Sortie, you may spend it 1-for-1 to do the following:

- Give another player increased level of success on their next move, but complicate things for yourself.
- Deny a Director character from appearing during the Sortie—they're busy, possibly with the same thing as you.
- Spend some time and take a Downtime move.
- Cut away from the Sortie during a moment when time is precious, giving everyone room to think.

BASIC & SPECIAL MOVES

LEAD A SORTIE

When you lead the group into battle, get in the robot when you're not supposed to, or otherwise take action that would move the game from Downtime to a Sortie, you're **LEADING A SORTIE**. When you lead, roll;

- +KNOW, if you're leading with wits or following a clever plan.
- +CREW, if success hinges on someone else aboard.
- +DEFY, if you're heading into danger carelessly.

On a 10+, you make it to the action unscathed. On a 7-9, the crew stumbles, misses something important, or is unprepared for what they meet.

While most moves have certain triggers or can be used whenever you want, **LEAD A SORTIE** is a little different. At the beginning of every Sortie, when everyone leaps into action (whatever that action may be), the players should figure out which Trait is appropriate and have someone roll for the move. **LEAD A SORTIE** establishes on what footing the crew finds itself once they get to their first obstacle.

DIRECTOR NOTES

You should always have someone roll to **LEAD A SORTIE** once the action starts, but if you forget, it's OK to do it retroactively and carry the results forward as you continue playing. When rolling with +CREW, it doesn't matter who makes the roll, since those attributes don't belong to any one player. When rolling +KNOW or +DEFY however, the roll should be made by whoever's trait is being used. If you're all going along with a plan thought up by the player with a -2 in KNOW, you don't get to have the +3 KNOW player make the roll on their behalf—that doesn't make any sense. There being a plan doesn't prevent someone from rolling with +DEFY if they want to rush off and ignore it.

EXAMPLES OF LEAD A SORTIE:

The crew of the *Ouroborous* has drawn up a plan to assault a prison ran by their campaign's Authority, the Zonel Empire. However, Dimir, the crew's Impostor, hotheadedly rushes into action so everyone else can benefit from their **DON'T FOLLOW ME** move. So, they roll to **LEAD A SORTIE** with +DEFY. It's a 7-9, and I decide the crew missed something important—they missed Dimir leaving! They'll have to catch up, and Dimir will be alone until they can.

The *Coarse, Correct* is heading into battle alongside a Carrier sent by one of their allied Factions, the Atteri Guild. Vetter, the group's Captain, has a GRAVITY clock with the Atteri Guild, and decides to **LEAD A SORTIE** with the value of that Clock since they're helping out. It's +2, and she gets lucky—the result is a 12! The *Coarse, Correct* and the Atteri ship both make it into battle safely, positioned to carry out the Sortie.

Serrah, a Captain, is leading the crew of her Carrier, the *New Serpent*. They're on a mission to deactivate an ancient magical relic their foes have unearthed, and having made the plan, Serrah rolls to **LEAD A SORTIE**. She rolls a 5, which leaves the crew on an unfortunate footing. All around the ship, sensors light up in worrying shades: they won't be making it anywhere without a fight.

BASIC & SPECIAL MOVES

SUBSYSTEMS

When you activate your Astir's **SUBSYSTEMS**, spend 1 Power to re-activate an expended [Active] Astir part and use it again.

All Channeler playbooks may use the **SUBSYSTEMS** move. This allows them to spend Power, a resource that is part of their Astir, to re-use its [Active] parts. Some Astirs have 0 Power, but most have between 1 and 4 depending on the choices made creating it. You start every Sortie with your Astir's full amount of Power, and do not usually regain spent Power between scenes.

DIRECTOR NOTES

The **SUBSYSTEMS** move gives players a quick way of resolving a variety of problems. It's risk-free and many Astirs offer the opportunity to do it more than once, so don't be afraid to remind your players if they find themselves in a tough spot and have Power to spend. As long as they're piloting their Astir and it's not deactivated or shut down, they can activate **SUBSYSTEMS**.

EXAMPLES OF SUBSYSTEMS:

Aidah is fighting eir Rival, and has just tried to **EXCHANGE BLOWS** with them. E described how they tried to circle around them, laying into them with a rayrifle, but then e rolled a pair of 2s. Not happy with this result, e decides to spend a point of Power on **SUBSYSTEMS** to reuse their 'Afterburners' Artifact and roll with **advantage**. E rolls an extra dice for the **advantage**, which is a 6! Taking eir two highest results (the 6 and a 2), combined with eir +CLASH of +1, brings the total from 5 to 8, making the move a partial success instead of failure.

Strata, the party Paradigm is snooping through a strange labyrinth, clearly built to be explored by something even larger than their Astir. He's been lost in there for a little while without finding anything, but he doesn't want to risk something bad happening if he **READS THE ROOM**. Instead, he spends Power on **SUBSYSTEMS** to use his Divination Codex and safely ask one question from the read the room list. He asks 'what is being overlooked here?'.

Prim, an Arcanist, is attempting to outrun a rampaging magma worm. He's pulling out all the stops, and his Astir is overheating after he used the **OVERRIDES** move to **WEATHER THE STORM** with +CHANNEL instead of +DEFY. Since his CHANNEL is +2, much better than his DEFY of -1, Prim decides to spend Power on **SUBSYSTEMS** to use his Heat Condensers and remove the overheating tick, meaning he can safely use **OVERRIDES** again.

B-PLOT

When you head out for some solitary revenge, leave to take part in negotiations, or otherwise take part in a secondary narrative thread to the players involved in the Sortie, you're in the **B-PLOT**. Name one or two Director characters that accompany you and hold 3. During the Sortie, you may spend it 1-for-1 to do the following;

- Give another player **confidence** on their next move, but complicate things for yourself.
- Deny an **actor** from appearing during the Sortie—they're busy, possibly with the same thing as you.
- Spend some time and frame a Downtime Scene.
- Cut away from the Sortie during a moment when time is precious, giving everyone room to think.

All Support playbooks may use the **B-PLOT** move. If the Sortie looks like it's going to involve Astir combat and you want to help out in an indirect way, or you have a plot thread you want to follow alone, you can use the **B-PLOT** to do that: it lets you be elsewhere, effectively in a Sortie of your own, while still having some agency over the main one.

DIRECTOR NOTES

The **B-PLOT** move provides people playing a Support playbook an easy way of always being able to apply their skill-set, even if the Sortie calls for something else entirely. Artificers can be off fixing things, Diplomats can be taking part in negotiations, and so on. This means that players can place themselves in somewhere interesting for their character, rather than sitting around on the Cruiser idly, or putting themselves in grave danger fighting Astirs on foot if they're the lone Support in a group full of Channelers.

If there's a **B-PLOT** to a Sortie, it should be established when **LEAD A SORTIE** is rolled, or earlier if possible. If the **B-PLOT** takes a player far away from the Carrier and the rest of their group, they should be prepared to explain how that happened. Since Sorties follow a period of Downtime, they might have travelled beforehand, or maybe they used some kind of magical method like a teleportation circle. **B-PLOT** by itself isn't magic, but the game's full of it elsewhere, so don't hold them to anything too rigid here.

A key thing to remember is that using **B-PLOT** enforces a level of narrative separation from the rest of the Sortie. You could, on a physical level, be very close to the events of the Sortie: but the effects of it cannot touch you until you run out of hold, at which point the two plots can come together whenever it feels appropriate.

EXAMPLES OF B-PLOT:

Captain Brightline has left to meet with other members of their Cause at a star castle. The rest of the crew is busy dealing with an errant god during the Sortie, so Brightline's meeting is a **B-PLOT**. They have 3 hold to help out though, and later when the fighting gets tough they spend 1 to let their ally Teasel act with **confidence** when she tries to commune with a space orb.

Kai, a Diplomat, is using the **B-PLOT** to sneak around a military encampment. Back in the Sortie, their allies are handling things ok, and the other players suggest Kai use his last hold to play a Downtime Scene. They do so, choosing the **HALLWAYS OR LISTENING POST** scene, representing them eavesdropping and gathering info earlier. They tick up some progress on a project they had earlier established that seems relevant, and play continues.

Mura, a Scout, is aiding one of their allied Factions by helping break the siege on a neutral city. Since everyone else is working to broker a peace treaty between two other Factions this Sortie, Mura's taking part in the **B-PLOT**. The group has been worried an Authority agent named Prose will show up to disrupt the treaty meeting, so Mura decides to spend hold to deny Prose from appearing during the Sortie. This'll certainly stop Prose from interfering with the meeting, but it also opens them up to being a problem for Mura.

DOWNTIME SCENES

Between Sorties, characters have time to themselves on the Carrier to rest, recuperate, and do their own thing. This is referred to as Downtime, and during it Downtime Scenes are played out—each focused on a different location on your Carrier. Downtime Scenes are similar to Conflict Scenes, but each is led by a single player who may invite others into it. Downtime Scenes don't need to be elaborate or long—they can be as simple as describing some actions you take. They may continue to invite other characters into the Scene as it plays out: other players may force a character into the Scene, at the cost of one of their **tokens**.

Every player gets to lead a Scene each, and also gets **2 tokens** to spend during any player's Scene for further benefits. The Director also takes **1 token** per other player: when they spend theirs, they may refocus the Scene for a moment and spend them on behalf of the Authority, to show members of it having their own 'downtime' (imposing the opposite of an option's benefit onto the players where appropriate). Additionally, you may choose to frame your Scene as a failure and not take the benefit described: if you do so, you may choose another player to gain an extra token for this Downtime. First, though, everyone should take a moment to...

CHECK IN

When you finish a Sortie and return to the Carrier to figure out what's next, it's time to **CHECK IN** with each-other not as your characters, but as players. Is everyone happy with how the game has gone since the last downtime? Has everyone remembered to clear any **risks** they gained during the last Sortie? Does anyone want to discuss the safety tools you're using, and maybe amend any lines/veils etc? Does anyone have thoughts or comments on how the game is progressing, and what they might want to see more or less of?

After you've **CHECKED IN**, everyone can choose and play their Downtime Scene.

COMMAND DECK OR BRIEFING ROOM

The leading player helps plan for the upcoming Sortie: adding a d6 to the upcoming **PLAN & PREPARE**. They frame a short scene around this, either alone, or with invited characters.

During the scene, anyone may spend a **token** to choose one:

- Contribute to the **PLAN & PREPARE**, as above.
- Report on aid they've given to a Faction, untapping it.
- Report on intel they've gathered: the Director will reveal something useful about the Sortie.
- Volunteer to take point: you'll **LEAD A SORTIE** in **confidence**.

SOCIAL SPACE OR PRIVATE QUARTERS

The leading player talks it out with another character and clears a *peril* of emotional or social origin from them, or they spend time with someone they have **GRAVITY** with, advancing it. They frame a short scene around this, either alone, or with invited characters.

During the scene, anyone may spend a **token** to choose one:

- Talk it out and clear someone else's *peril*, as above.
- Encourage/demoralise someone: they'll make their first move during the Sortie at **advantage/ disadvantage**.
- Spend time with someone you have **GRAVITY** with, advancing it.
- Rewrite a Hook, or press someone else to do the same.

FADE

The leading player describes somewhere on the Carrier or nearby that they pass time, gaining a point of Spotlight and advancing a **GRAVITY** clock if they have one with someone that joins them. They frame a short scene around this, either alone, or with invited characters.

During the scene, anyone may spend a **token** to choose one:

- Pass time, as above.

DOWNTIME MOVES

INFIRMARY OR HANGAR

The leading player clears a *peril* of mechanical or physical origin from a character or construct, or swaps an Astir part out for another you already have. They frame a short scene around this, either alone, or with invited characters.

During the scene, anyone may spend a **token** to choose one:

- Clear a *peril* or swap a part, as above.
- Help someone you have GRAVITY with, advancing it.
- Start or advance a long-term project: describe what your work looks like.
- Take their Astir and rush ahead: you'll **LEAD A SORTIE** with +DEFY & **advantage**.

When you rush ahead, this doesn't end the Downtime: other Scenes can be played chronologically before this one, and the crew might also just not spring into action in your wake.

HALLWAYS OR LISTENING POST

The leading player overhears something: they may start or advance a long-term project to learn more, or take **advantage** during the next Sortie acting on what they learned. They frame a short scene around this, either alone, or with invited characters.

During the scene, anyone may spend a **token** to choose one:

- Overhear something, as above.
- Discuss how this info will factor into the Sortie: add a d6 to your **PLAN & PREPARE**.
- Have a heated conversation with someone you have GRAVITY with, advancing it.
- Barge in on whoever was overheard, causing trouble for someone involved.

SOMEWHERE NEARBY

The leading player rolls a d4 to see what resources they can muster, and acquires gear or equipment with a total value upto the result. They may spend extra **tokens** or *tap* Factions to increase the result by another d4, or trade objects with the *valuable* or *treasure* tags for +2 or +4 respectively. They frame a short scene around this, either alone, or with invited characters.

During the scene, anyone may spend a **token** to choose one:

- Buy or trade for something of value, as above.
- Start or advance a long-term project: describe what your work looks like.
- Spend time working or in the field with someone you have GRAVITY with, advancing it.
- Run into trouble: resolve it with moves as usual, and see what you learn.

Once everyone has taken their Downtime Scene, finish off the Downtime period by setting up the next Sortie. Everyone describes what they are doing to help prepare for what is to come, and rolls **PLAN & PREPARE**.

PLAN & PREPARE

When you review orders for the next Sortie, go over scouting reports and maps, or otherwise attempt to prepare the crew for what comes next, you're trying to **PLAN & PREPARE**. Roll 2d6, plus any extra dice earned during Downtime Scenes, and compare the results to the **Strength** of the Division that your next Sortie will target.

For every result that is above the Division's **Strength**, choose one:

- During the Sortie, you will have an opportunity to un-tap a Faction of your choice.
- During the Sortie, you will have a risky opportunity to fell a Pillar with 0 GRIP.
- During the Sortie, you will have a risky opportunity to secure an Outcome from a Faction.
- The next **LEAD A SORTIE** roll is made with **advantage**.
- All players hold 1. You may spend your hold during the next Sortie as if it were hold gained through one of your basic or playbook moves.

Remind your players: every Conflict Turn requires at least one Faction per Division to be tapped. When they're considering their Downtime Scenes and what they'll earn each Sortie through plan and prepare, they might want to keep that number in mind.

DIRECTOR'S NOTES

PLAYBOOKS

All players in Armour Astir create a character using a 'playbook', which is a mechanical framework similar to classes or archetypes in other games. Playbooks offer choices for starting equipment, moves, and aesthetics like clothing or style. They also offer some narrative background for your character to root them into the world you're playing in, as well as some questions to help you further develop what it means to be that playbook in your setting.

Playbooks are split into two kinds: Channelers, who are Astir pilots primarily, and Supports, who are not. Each kind has a specific extra move attached to it. For Channelers, it's **SUBSYSTEMS**. For Supports, it's **B-PLOT**.

CHANNELERS

Channelers are magic-users who stride into battle while piloting Astirs, making them best equipped to deal with Sorties that involve physical conflict. While they have their differences, all Channelers are more than capable in a fight. They're also all capable of diverting magic to their Astir's **SUBSYSTEMS** with the move below.

ARCANIST IMPOSTOR

PARADIGM WITCH

SUBSYSTEMS

When you activate your Astir's **SUBSYSTEMS**, spend 1 Power to re-activate an expended [Active] Astir part and use it again.

SUPPORTS

Supports are a varied group, but are generally people with less of a direct combat focus than Channelers. While they're all capable of holding a sword, most Support playbooks have an area of expertise best put into practice off the battlefield. When a Sortie doesn't call for their skill-set, they can instead take part in the **B-PLOT** with the move below.

SCOUT CAPTAIN

ARTIFICER DIPLOMAT

B-PLOT

When you take part in the **B-PLOT** rather than be involved in a Sortie, name one or two **actors** that accompany you and hold 3. During the Sortie, you may spend it 1-for-1 to do the following;

- Give another player **confidence** on their next move, but complicate things for yourself.
- Deny an **actor** from appearing during the Sortie—they're busy, possibly with the same thing as you.
- Spend some time and frame a Downtime Scene.
- Cut away from the Sortie during a moment when time is precious, giving everyone room to think.

ARCANIST

Disciplined students of arcane magic, who practice their talents for years before graduating to the cockpit of an Astir.

+CHANNEL (+2)

LOOK

You look: *smart, bookish, wily, anxious or imposing*

You wear: *pilot jumpsuit, military uniform, dress uniform, fancy robes*

Your magic is like: *roaring elements, bright and neon, abstract and formless, formulaic and defined*

When you launch your Astir, you say: _____

APPROACH

When fighting on foot, your **approach** is: **arcane** or **elemental** (choose one)

GEAR

- 1 Astir III
- Touch Spells I (*melee / bane*)
- 2 Arcanist Gear
- Clothes that match your look

ARCANIST GEAR

- Telescoping Staff I (*melee / impact*)
- Reagent Knife I (*melee / mundane*)
- Sidearm I (*ranged / defensive*)
- Shield Broach I (*ward*)

Arcanists are careful, prepared magic-users. This is most apparent in their use of ‘rituals’ — magical tactics and enhancements preemptively cast before they embark onto the battlefield. Arcanists typically attain the magical mastery they have through formal study, and while good at making plans and full of useful knowledge, they often don’t deal well with surprises.

Playing an Arcanist often means calling your shot, either through your choice of rituals or through plans you make in the heat of action. Once you have advanced and can take new ones, other moves like **EXPEND RITUALS** and **RESHAPE** make it easier to respond to situations you haven’t prepared for. Consider;

- What does formal magical study look like in your world?
- Is this something open and public, like an academy, or private, like training passed down through a family lineage? Was it tied to military service?
- Do you have a familiar or bonded item you use to focus your magic?
- What does performing your rituals entail?
- Where did you get your Astir? Is it stolen from a military force? A family heirloom? Does it belong to the Cause?
- Do all Arcanists study where you did, or are there multiple schools of thought?
- Are people like you openly referred to as Arcanists? If not, is there another name for what you are?

GRAVITY TRIGGER

When you declare your plan to solve a problem and it works, advance a GRAVITY clock with someone who doubted you.

STARTING MOVES

You start with the **PREPARE RITUALS** move and one more of your choice during Astir creation.

PREPARE RITUALS

Before every Sortie, you prepare a set of complex **RITUALS** to bolster your magical potential. When someone **LEADS A SORTIE**, describe to your Director 3 magical rituals you prepare, and choose an effect for each from below. Any remaining **RITUALS** expire when you prepare new ones.

- You may spend the **RITUAL** to make a specified move in **confidence**.
- Your Astir’s **approach** becomes a different one of your choosing for this Sortie.
- Hold 2: you may spend this 1-for-1 to ignore a **disadvantage**.

PLAYBOOKS

ADDITIONAL MOVES

When you take a new move from your playbook as an advancement, choose from the list below.

ADAPTIVE RITUALS

When you fail a move on a 6-, you may re-choose any **RITUALS** you have remaining.

PRE-ORDAINED

When you make a move with **advantage** or **disadvantage**, you may hold onto one unkept d6 for the rest of the Scene. During that Scene, you may replace any rolled d6 with that kept one. You may only keep one d6 at a time in this way, and must use it before you can keep another.

CONSULT LITERATURE

You have a store of books and scrolls on various subjects that you can consult for information when given time. Choose 1 subject you have almost perfect records of, and 2 you have extensive information on;

- Construct models and design
- Magical beasts and monsters
- Enchantment and spell-craft
- Mundane craft and building
- Natural flora and fauna
- Military tactics
- A specific nation/faction
- General world history

Your Director might offer you opportunities during Sorties and Downtime to expand your knowledge, adding new subjects you have records on. Occasionally, people might lean on you for the information that you hold.

TACTICAL ILLUSIONS

When you distract your foes with magic, roll +CHANNEL. On a 10+, choose 2. On a 7-9, choose 1, but your illusions also distract an unintended audience.

- The illusions last until you stop sustaining them (otherwise they last up to a minute).
- Your illusions affect anyone you intend to perceive them, rather than a single person.
- You can create illusions that affect all the senses, rather than just sight.

IDENTIFY

You may spend 1 hold from **READ THE ROOM** to identify an Astir, learning its **approach**, source and general capabilities. When attempting to recreate elements of an identified Astir or help someone else do the same, take **advantage**.

RESHAPE

When you **WEAVE MAGIC** to reshape a battlefield to your liking, hold 2. The usual consequence of a 7-9 still applies. You may spend your hold 1-for-1 to do the following;

- Prevent a foe from leaving the battlefield
- Delay others from joining the battle
- Provide someone with the cover they need to **COOL OFF**
- Create a spectacle that will be difficult to suppress or cover up

TRANSMUTE SELF

Arcanists are well-educated in many things, and the good ones learn to augment their natural abilities to better suit different situations—or just to pursue different interests. You may select two more sets of Trait values, using the same conditions used during character creation. With a magical flourish you swap between any of these sets of Traits—though doing it under pressure or unnoticed might require a move.

When you increase a Trait as an advancement, apply this to your **TRANSMUTE SELF** Traits too.

NEW PERSPECTIVE

When you are put in *peril*, you may **READ THE ROOM** with **confidence & advantage** in response.

IMPOSTOR

Through magic, medicine, or sheer force of will, you took control of your body and made it ideal. This is who you were meant to be, and they'll never take it away from you.

+CHANNEL (+1)

LOOK

You look: *wild, cold, sharp, cocky or brash*

You wear: *custom-made jumpsuit, modified uniform, ill-suited dress, casual attire*

Your magic is like: *smoke and industry, neon beams, firey outbursts, arcing bolts*

When you launch your Astir, you say: _____

APPROACH

When fighting on foot, your **approach** is: **profane** or **elemental** (choose one)

GEAR

- 1 Astir III
- Augments I (*melee / bane*)
- 2 Impostor Gear
- Clothes that match your look

IMPOSTOR GEAR

- Power Focus I (*ranged / blitz*)
- Nullblade I (*melee / mundane*)
- Sidearm I (*ranged / defensive*)
- Shield Broach I (*ward*)

You have no magic of your own, and control an Astir through enchanted augmentations or alterations to your body. They say what you do is fake. They call you an Impostor—but what you do is real, and you've made yourself exactly who you needed to be. The Impostor has a diverse skill set with lots of ability to play with risks and perils.

To play an Impostor is to, depending on what your **ARCANE AUGMENTS** are and why you got them, invite questions about the body: about disability, transhumanism, being transgender, loss of bodily autonomy to the Authority or otherwise and so on. It might not be the focus of your campaign or even your character to tackle this in-depth, but you should be actively thinking about the place of these things and the people affected by them in your world. It's also the playbook most indulged in mecha anime tropes, with moves like **FACE TO FACE**, **RESONANCE**, **BULLHEADED** and **LET LOOSE** all lending themselves to various kinds of hot-blooded action. Consider;

- Where and how did you get your augments?
- How are they made, and of what material? How rare are such things in your world? How noticeable are they?
- Do people use a word other than ‘augment’?
- Why did you choose to undergo augmentation? Did you choose?
- How does the existence of Impostors relate to disability in your world?
- How do your augments impact your daily life and routines?
- What kind of reactions do people have to your augments?
- Are your augments heavy or uncomfortable? Can they be removed?
- How do your augments help your control an Astir? Do you use controls with them like usual, or do they interface directly into it somehow?
- How often is the term Impostor used, if at all? Is it formal or informal? Do you have another word for yourself? Are there others who control Astirs in a similar way?

GRAVITY TRIGGER

When someone you have GRAVITY with sees you be put in *peril*, advance it.

STARTING MOVES

You start with the **ARCANE AUGMENTS** move and one more of your choice during Astir creation.

ARCANE AUGMENTS

Impostors control their Astir using magical augmentations, like artificial limbs or organs. These augmentations allow a non-magic user to power and control an Astir, but otherwise do not interfere with your life unless you (the player) decide so. Being bonded to magic in this way often leads to it affecting the body and vice versa, irreversibly tying their magic to their emotional and physical state.

Your CHANNEL is increased by 1 for each danger you have (up-to a max of +3).

PLAYBOOKS

ADDITIONAL MOVES

When you take a new move from your playbook as an advancement, choose from the list below.

HOT-BLOODED

When you **HEAT UP**, hold 1. You may spend 3 hold gained in this way to;

- Succeed at a move as if you had rolled a 10+.
- Attempt something uncanny, superhuman, or unbelievable.

TROUBLEMAKER

Whenever you fail a Downtime Scene, you may give yourself 2 **tokens** instead of passing 1 to another player.

DON'T FOLLOW ME

During any Downtime Scene, you may do the below without spending a **token**:

- Take your Astir and rush ahead: you'll **LEAD A SORTIE** with +DEFY & **advantage**.

RESONANCE

When you would **WEAVE MAGIC** to form a clear empathetic bond with another, sharing your true feelings and clearly communicating your Hooks, choose 1 instead of rolling;

- Your connection lasts a single, precious moment—time for little more than a short exchange.
- They or someone else view it as a breach of trust or some kind of trick, and will hold it against you.
- You miss something important while you're together.

LET LOOSE

For every *burden* you have, you may increase one of your Traits by +1. The usual max of +3 does not apply to increases earned through **LET LOOSE**.

BULLHEADED

You may take a *risk* to take **advantage** on your next roll. People know that you are brash and liable to put yourself—and maybe them—in danger to get the job done.

FACE TO FACE

When you leave your Astir in the hopes another will do the same to meet you **FACE TO FACE**, roll +TALK.

On a 10+, They will leave their Astir to face you. Player characters may **WEATHER THE STORM** to refuse.

On a 7-9, They will leave their Astir to face you, but choose one;

- Take the *risk* (entangled).
- You have **disadvantage** to moves against the other Channeler.
- You are separated from your Astirs temporarily.

Player characters may choose whether to leave their Astir or not—if they do, they pick one of the above for you.

REALIGNMENT

You undergo deeper alteration and adjustments to your body. Discuss what it is with your Director, and either choose a move from another playbook to represent its effects, or work with your Director to create a new one.

PLAYBOOKS

Mecha fiction is typically, whether it intends to be or not, about bodies. Mechs are a projection of the self—something huge and powerful, but draped in the visual language and shorthand we use for ourselves. By extension, mecha fiction often asks complex (and sometimes ill-considered) questions about disability and the place of disabled people in times of conflict. What does it feel like—and what does it mean—to take control of another body when that body is a war machine? Less often interrogated is how they are kept out of and forgotten by oppressive structures of power, and far less so is how movements that set out to disrupt those structures often replicate the same exclusion: both of disabled people, as well as other marginalised groups.

These issues are often just as front and centre, if not more so, in genres like cyberpunk that deal with human augmentation or ‘enhancement’: where alteration or realignment of the human form is easily doable, but often inextricably linked to new avenues of capitalist exploitation and new masks on old prejudices.

The Impostor, then, is a collision of these things. When playing one or running a game where they exist, I urge you not to forget disabled people in the places and conflicts you depict, and to consider their relationship and accessibility to the kind of body modification that is explicitly already in reach of the Impostor. Make room for the disabled players at your table to take authorship on these subjects when they come up in your game if they want to, and make sure to elevate their thoughts and feelings on how you and others handle them if you yourself are not disabled.

Furthermore, extend that same concern to those living with gender dysphoria, chronic illness, substance abuse or other issues to which relief and treatment (and often even sympathy) are actively controlled and restricted by those in power today.

The core concept of the Impostor is that you have been changed so that you can power and pilot an Astir: it is important to consider which is the prize and which is the price for your character. Did they change you so that you could fight, or do you fight so that they would change you?

DIRECTOR'S NOTES

PARADIGM

Adherents of the gods who channel sacred power into their Astir to control them. The devout know to respect their faith's tenets, lest their Astir fail beneath them in the line of duty.

+CHANNEL (+3)

LOOK

You look: *serious, haughty, caring, wise or zealous*

You wear: *pilot jumpsuit, military uniform, dress uniform, religious garb*

Your magic is like: *angelic choirs, blinding lights, warm embraces, blazing icons*

When you launch your Astir, you say: _____

APPROACH

When fighting on foot, your **approach** is: **divine** or **profane** (choose one)

GEAR

- 1 Astir III
- Divine Touch I (*melee / bane*)
- 2 Paradigm Gear
- Clothes that match your look

PARADIGM GEAR

- Holy Symbol I (*ranged / area*)
- Sacred Weapon I (*melee / mundane*)
- Sidearm I (*ranged / defensive*)
- Shield Broach I (*ward*)

Paradigms channel their divine power from a deity, and must adhere to its tenets in order to maintain that power. These tenets, as well as what upholding them looks like, might vary between members of a faith as well as just between different faiths. Paradigms have something to uphold outside of the Cause's goals, and naturally bring a religious element to the game that might not be present otherwise - of course, there doesn't need to be Paradigms in a world for faith to be important.

While playing a Paradigm, you have lots of moves that let you aid and protect other players, like **SAFEGUARD** and **BLESS**. Your high natural CHANNEL of +3 also gives you a great chance of success on moves like **WEAVE MAGIC** and **FIREBRAND**, but making good use of it will require you to always keep your **TENETS** in mind. Broadly speaking, playing a Paradigm also means you have an important voice in what the role of faith and religion is in your setting. Consider;

- Is your deity really divine in the supernatural sense, or just a godlike figure?
- How formal is your religion/connection to your deity?
- How well known is your deity?
- How common are people like yourself? Are they called Paradigms, or something else?
- What is the Cause's relationship to faith?
- What is the Authority's relationship to faith?
- What is your deity like? What do they demand, and what do they request?
- What does giving service or worship to your deity look like?
- What was your life like before the Cause?
- How were you introduced to your deity?

GRAVITY TRIGGER

When you discuss your faith with someone or learn something about how they personally relate to faith and spirituality, advance a GRAVITY clock with them if you have one.

STARTING MOVES

You start with the **TENETS** move and one more of your choice during Astir creation.

TENETS

Instead of Hooks, write three **TENETS** that represent your deity's will. When you break or lose faith in a **TENET**, your deity will ask something of you. Roll +CHANNEL with **desperation** until you resolve this: once you have, take an Advancement and replace that **TENET** with a Hook representing how your faith has changed or grown.

If you refuse or resolve it in a way that angers or disappoints the divine, reduce your CHANNEL by 1 permanently. If your CHANNEL reaches 0 in this way, immediately change playbooks and take an additional Advancement.

PLAYBOOKS

Example **TENETS** might be:

- Violence is a road taken when all others are closed.
- Share your faith freely, that it might spread.
- Scepticism is an affront to the divine.
- From each according to his ability, to each according to his needs.

Additionally, you are in service of a deity or faith and are responsible for the spiritual well-being of your Carrier's crew. You may perform an extra **SOCIAL SPACE OR PRIVATE QUARTERS** Scene during Downtime, as you discuss your faith with another or give religious service of some kind.

ADDITIONAL MOVES

When you take a new move from your playbook as an advancement, choose from the list below.

DIVINE GUIDANCE

When you consult your deity for information or guidance, you may **DISPEL UNCERTAINTIES** with +CHANNEL. If you do so, on a 7-9 the information is still directly useful, but it is difficult to discern if your answer came from the intended deity. People know you can literally contact the divine.

AVENGER

When an ally or yourself is put in *peril*, you may declare the responsible party (you are the judge of who is responsible in this context) your target. You may freely ignore any *risks* you would be forced to take in direct pursuit of your target during a Sortie. If you do so, the extra Scene from **TENETS** is lost during your next Downtime: you must use it to tend to yourself instead.

INSPIRE FOCUS

Once per Sortie, you may take a visible position over the battlefield and inspire confidence and clarity in your allies that see you: they each clear a *risk* and take **advantage** to their next roll.

SAFEGUARD

When you **EXCHANGE BLOWS** and someone **HELPS OR HINDERS** you, you can protect them from any harm they might suffer as a result. When you **HELP OR HINDER** someone who is **EXCHANGING BLOWS**, you can suffer any harm taken in their place.

TURN UNEARTHLY

You may **EXCHANGE BLOWS** and **STRIKE DECISIVELY** using +CHANNEL against creatures and entities that are not of our mortal plane. You can sense such creatures, and make them uncomfortable.

FIREBRAND

When you openly and loudly advocate for something related to one of your tenets, roll the highest of +TALK or +CHANNEL. On a 10+, choose 2. On a 7-9, choose 1.

- Your words reach people far beyond where your voice is heard.
- Even those not of your faith connect to your message.
- You are not targeted immediately for what you preach.

On a 6 or below, your words are misinterpreted, co-opted, or misrepresented in a terrible way.

CONSECRATE GROUND

When you attempt to imbue an area or building with your divine power and presence, roll +CHANNEL. On a 10+, choose 2. On a 7-9, choose 1;

- Creatures opposed by your deity or faith cannot enter the consecrated area.
- Creatures within your consecrated area cannot take violent action against each other.
- Creatures within the consecrated area **COOL OFF** with **advantage**.
- Creatures within your consecrated area cannot knowingly lie.

ASCENSION

By divine decree you become something beyond the person you were. You may **BITE THE DUST** with +CHANNEL, and you clear all *risks* on a 10+ rather than one.

WITCH

Witches seize power through pacts with powerful creatures, knowingly or otherwise. This power fuels and binds an Astir as well as any other, but its sources can be demanding... and mischievous.

+CHANNEL (+2)

LOOK

You look: dark, mysterious, shrouded, unsure or haunted

You wear: pilot jumpsuit, military uniform, dress uniform, occult robes

Your magic is like: smothering darkness, roiling chaos, striking bolts, withering curses

When you launch your Astir, you say: _____

APPROACH

When fighting on foot, your **approach** is: **arcane** or **profane** (choose one)

GEAR

- 1 Astir III
- Pact Weapon I (*melee / bane*)
- 2 Witch Gear
- Clothes that match your look

WITCH GEAR

- Patron's Icon I (*ranged / concealable*)
- Ritual Dagger I (*melee / mundane*)
- Sidearm I (*ranged / defensive*)
- Shield Broach I (*ward*)

Witches receive their magic from an otherworldly patron or benefactor, whose motivations are rarely discernible to mortal folk. Many kinds of being might be a **PATRON**, and their grip on a Witch might be visible in a lot of different ways—but they all have one thing in common. **PATRONS** trade in Influence: a resource they can spend to make sure you hold up your end of the bargain.

While playing a Witch, you trade Influence to your **PATRON** to activate a variety of moves, like **RE-WEAVE REALITY** and **BORROWED POWER**. These moves let you break the rules a little: altering weapon tags, messing with dice results, and even using moves from other playbooks. **RECEIVE BOONS** gives you two moves at random per Sortie, but both **WHIMS** and **BORROWED POWER** give you some control over what you end up with. Consider;

- What and who is your patron? Are they supernatural, or just powerful enough to seem so?
- What is the nature of your relationship with your patron?
- Are there other Witches serving your patron? Are there other Witches at all?
- Do people refer to you as a Witch? Is there another term they or you use?
- Is your bond with your patron forever, or will it expire?
- What other kinds of beings exist that could be patrons?
- Did forming this bond cost you anything now, or will it in the future?
- Is there a recognisable symbol of your patronage? An associated familiar?
- Does your patron have a direct connection to you, or do they act through agents?
- Are your boons an informal collection of helpful magics, or something more defined? If so, what do you call them?

GRAVITY TRIGGER

You have an extra GRAVITY clock with your **PATRON**, representing the tenuous bond between you: whenever they spend Influence, advance your GRAVITY clock with them.

STARTING MOVES

You start with the **PATRON** move and one more of your choice during Astir creation.

PATRON

Your **PATRON** offers you two **BOONS** at random whenever someone **LEADS A SORTIE**. Additionally, they may spend Influence 1-for-1 to do the following:

- **HELP OR HINDER** you, succeeding as if they had rolled a 10+.
- Attempt to force you to do something; you may **WEATHER THE STORM** to resist.
- Re-roll your **BOONS** for the day.

As long as you Patron has at least 1 Influence, your CHANNEL is increased by 1. The more Influence on you a Patron holds, the clearer their mark is upon you.

PLAYBOOKS

ADDITIONAL MOVES

When you take a new move from your playbook as an advancement, choose from the list below.

OCCULT LORE

When you consult your patron for information, you may **DISPEL UNCERTAINTIES** with +CHANNEL. If you do so, on a 7-9 the information is still directly useful, but using it would cause some unforeseen complication entertaining or beneficial to your **PATRON**.

WHIMS

Your patron is unfathomable, and their interests obscure. Your Director should, once per Sortie, give you some minor goal or abstract requirement your patron demands of you—it should be doable within the session. If you complete it, you may choose your **BOONS** instead of rolling next time. If you don't, give your patron 1 Influence.

EMBRACE CHAOS

Whenever you roll a 10+, you may opt to instead take a partial success as if you had rolled a 7-9. If you do so, hold 1, which you may spend at any point before the end of the Sortie to do one of the following:

- Convert a **disadvantage** into an **advantage**.
- Upgrade a result of 7-9 to a 10+.

RE-WEAVE REALITY

When you use a piece of equipment to make a move, e.g using a weapon to **STRIKE DECISIVELY**, you can ignore one of its tags OR act as if it had an additional one of your choice. When you do so, give your patron 1 Influence.

RELINQUISH

If a part of your Astir is damaged or destroyed and you take a *peril* as a result, you may relinquish your **BOONS**; losing them until you receive **BOONS** again but fixing that part and losing the *peril*. You cannot re-roll relinquished **BOONS**.

BEARER OF CURSES

When you **EXCHANGE BLOWS** with someone for the first time in a Scene, choose 1;

- They cannot use **SUBSYSTEMS** for the rest of the Scene.
- You leave a difficult to remove brand or mark on them, according to your **PATRON**.
- They suffer misfortune in the future: the next move against them is made with **advantage**.

BORROWED POWER

When you request help from your patron, roll +CHANNEL and give your patron 1 Influence. On a 10+, hold 3. On a 7-9, hold 1, or be in *peril* and hold 3. You may spend your hold at any point during the Sortie 1-for-1 to use any **BOON** you don't currently have, or you may spend 2 hold to make any move from another playbook.

BOONS

- 1 **EMPOWERING BOON:** You may give your **PATRON** 1 Influence to make the **SUBSYSTEMS** move for free. When you do so, describe what mark your patron's power leaves on the situation.
- 2 **TENACIOUS BOON:** When you **COOL OFF** you may choose to succeed as if you had rolled a 10+. If you do so, give your patron 1 Influence.
- 3 **MASKING BOON:** You can mask yourself or an Astir you are attuned to against detection. When you do so, roll +CHANNEL. On a 10+, you are disguised or cloaked in a fashion appropriate to your **PATRON**. On a 7-9, the Director will tell you a flaw with your disguise.
- 4 **SHIELDING BOON:** You may give your **PATRON** 1 Influence to avoid taking a *risk*.
- 5 **SHIFTING BOON:** You may swap two of your Traits for this Sortie.
- 6 **TRICKSTER'S BOON:** Whenever you roll doubles, something helpful but unexpected happens.

CAPTAIN

Even the best of teams need guidance. Overlooking sorties from the Carrier's helm, the Captain commands the crew and ensures those in the field get the help they need.

LOOK

You look: *noble, upright, callow, eager or intimidating*

You wear: *immaculate uniform, casual clothes, armoured clothing, officer's coat*

You lead with: *gut feelings, well-informed advice, stoic instruction, tested experience*

APPROACH

When fighting on foot, your **approach** is: **mundane**

GEAR

- 1 Ornate Gear
- 2 Crew/Carrier Bonuses
- Clothes that match your look

ORNATE GEAR

- Gilded Sidearm I (*ranged / versatile*)
- Ruinlock I (*ranged / reload, ruin, profane*)
- Duelist's Blade I (*melee / bane, decisive*)
- Arcane Mantle I (*ranged / defensive, arcane*)

CREW/CARRIER BONUSES

- Marine Infantry (they'll fight tooth and nail to defend the Carrier)
- Civilian Quarters (Can safely accommodate refugees)
- Construct Bay (Steed Ardents for everyone)
- Cloaking Rituals (Can hide the Carrier from sight)

Responsible for the crew and their mission, the Captain provides support on missions by leading the crew and harnessing the Carrier's equipment and weaponry. Captains can even provide temporary upgrades and refits for Constructs deployed on a sortie, or level their tactical know-how into better positioning on the battlefield.

While playing a Captain, you're **IN COMMAND** of the group's Carrier and its crew. This lets you roll several moves with the Carrier's +CREW trait instead of your own when commanding it—which is either a blessing or a curse, depending on what that CREW value is. Additionally, while at the helm of your Carrier you can take 4 dangers rather than 3 before you're *defenceless*, meaning you're tough to take down in a straight fight. All those hands on deck add up, after all. Many of your other moves revolve around supporting other players, like **SURPRISE REQUISITION** and **FIRE SUPPORT**. Consider;

- Were you formally schooled as a Captain? How exclusive are such schools?
- Who appointed you Captain of this Carrier?
- Have you served with another crew before?
- Are you used to helming ships this big?
- Have you served with a military before? Are you a commissioned officer?
- What exactly is your place on the Carrier's bridge?

GRAVITY TRIGGER

When anyone rolls a 6 or below while rolling +CREW, advance a GRAVITY clock with someone who has put their trust in you.

STARTING MOVES

You start with the **IN COMMAND** move as well as two others from your Additional Moves.

IN COMMAND

You are the Carrier's captain, and naturally have command of its crew. While at the helm of the Carrier, you may order the crew to perform moves on your behalf: unlike when other playbooks use +CREW, you may do this any number of times. Increase your Carrier's +CREW by 1.

When you do so, explain how the crew helps you do this thing—they share in the consequences of your move, good and bad. You are responsible for their lives. If things go bad rolling your Traits, things go bad for you. If things go bad rolling +CREW, you endanger everyone.

Additionally, both Carrier and crew are part of your character as far as *risks* and *perils* are concerned, just like an Astir is an extension of its channeler. To reflect the many minds and hands at work for you, you are *defenceless* at 4 dangers while at the helm of your Carrier, rather than 3. You go down with it, and it goes down with you.

PLAYBOOKS

ADDITIONAL MOVES

When you take a new move from your playbook as an advancement, choose from the list below.

TACTICAL GENIUS

When you're supervising allies from afar during a Sortie, you can lever your tactical know-how into better positioning. Take 1+KNOW hold at the start of a Sortie, and spend it 1-for-1 to do the following;

- Remove one *risk* from an ally.
- Give an ally **advantage** to their next move, describing how you advise or support them.
- Have an ally appear somehow in a place they are needed.

FORCE MULTIPLIER

You acquire something—a tool, ship upgrade, a caged malevolent sentience, etc—that allows the Carrier and its staff to operate far better than usual, but it has a downside. For each of the below drawbacks you give it, once per Sortie you may act with **confidence**.

- It whispers in your ear—change one of your Hooks to represent its demands.
- It's *fragile* and needs protecting. It grants no benefit while damaged or destroyed.
- It is physically taxing or requires upkeep of some kind: gain a *burden*. If you gain this move at the same time as you would gain a burden from another source, you take this one instead.

SURPRISE REQUISITION

When you dispatch supplies to another character or reveal something extra you had them deployed with all along, roll +CREW. On a 10+, choose 1 for free. On a 7-9, you had to requisition that gear personally; tap a Faction as they spread themselves thin to help you.

- A weapon rendered unusable by damage or lack of ammo is replaced/rearmed (clearing a related *peril*, if applicable).
- A weapon gains the *bane* tag until the end of the scene.
- A weapon gains the *ruin* tag for one shot or strike.
- An Astir changes its **approach** until the end of the scene.

FIRE SUPPORT

When you provide instruction and call shots for the Carrier's crew, you may **EXCHANGE BLOWS** and **STRIKE DECISIVELY** using +KNOW and the Carrier's weaponry.

INFORMATION NETWORK

When you contact your superiors or an appropriate source for relevant intel, you may **DISPEL UNCERTAINTIES** with +TALK.

Take +1 token during Downtime to spend on any info-gathering efforts or projects.

BORN LEADER

You **LEAD A SORTIE** with **advantage** and give the crew **confidence** when they **PLAN & PREPARE**. Figures within the Cause lean on you for strategic advice: to some degree, their successes and failures during the Conflict Turn can be attributed to your guidance.

HUMAN RESOURCES

When you **READ THE ROOM**, you may also choose from the following questions;

- What is the crew's mood like?
- Who is responsible for a problem on-board the Carrier?
- What could be a problem for the crew in the immediate future?

COORDINATOR

When you roll a 10+ to **HELP OR HINDER** and choose to help, your ally may act with **confidence** in addition to **advantage**.

DIPLOMAT

Not every war is fought with weapons. For a Diplomat, the battlefield is a boardroom, the landmines are a host's hospitality and the only weapon you need is a winning smile.

LOOK

You look: *noble, refined, experienced, naive or slick*

You wear: *military dress, mostly disguises, luxury fashion, recognisable uniform*

You have a reputation for being: *fair and trustworthy, sly and wily, unpredictable, bold and pushy*

APPROACH

When fighting on foot, your **approach** is: **mundane**

GEAR

- 1 Diplomacy 'Tool'
- 3 'Diplomacy' Tools
- Clothing that matches your look

DIPLOMACY 'TOOLS'

- Spyglass Ray I (*sniper / bane, elemental*)
- Fencing Blade I (*melee / defensive, blitz*)
- Arcane Dagger I (*melee / ruin, intimate, arcane*)

'DIPLOMACY' TOOLS

- Listenbugs (overhear anyone during Downtime near a bug you've hidden—they're *fragile*)
- Lockpicks (Useful for picking locks, unsurprisingly)
- Silencing Matrix (Removes all noise from a tier I weapon)
- Shimmershape Clothing (Clothing can magically change colour and design)
- Agents (Does the below once per Downtime)
 - Report on intel they've gathered: the Director will reveal something useful about the Sortie.
- Transport (You have a mount or vehicle that's fast and quiet—probably something tier II)

Diplomats are the kind of people that bring factions together and negotiate the impossible. They definitely never ever spy on anybody; instead, they meet with other important people face to face to achieve with words the kind of things that a legion of men couldn't with blades. The pen is their sword, and none of them have ever knocked a man out before stealing his uniform to pass as a guard.

While playing a Diplomat, you have a lot of power to set the rules of a social situation with moves like **FACILITATOR** and **BUREAUCRAT**. You're also very good at subterfuge, both by manipulating people and by stabbing them when they aren't looking, with a suite of moves including **SHARP TONGUE** and **SHARPER KNIVES**. Consider;

- Are you actually a diplomat? Do you hold any official office?
- How long have you been with the Cause? Were you part of it before joining this crew?
- What's your stance on violence?
- What is your network of connections like? Do you have one?
- What motivates you during this conflict? What are your goals?
- What's the most danger you've been in before?
- What does diplomacy mean to you? How do you go about it?
- Have you ever negotiated with the Authority before?

GRAVITY TRIGGER

When you successfully negotiate or advocate for something important to you, advance a GRAVITY clock of your choice.

STARTING MOVES

You start with the **FACILITATOR** move as well as two others from your Additional Moves.

FACILITATOR

You may **READ THE ROOM** with +TALK when mediating or taking part in a conversation/discussion. When you set up a clandestine meeting, choose 2;

- There's no risk of an ambush or interference.
- Third parties aren't privy to the contents of the meeting.
- All parties are willing to discuss in good faith.

PLAYBOOKS

ADDITIONAL MOVES

When you take a new move from your playbook as an advancement, choose from the list below.

SHARP TONGUE

When you **EXCHANGE BLOWS** with +TALK, on a roll of 12+ your opponent is put in *peril*.

SHARPER KNIVES

You're trained in the arts of assassination and stealth. Take **advantage** while attempting to remain undetected or unseen, and being unaware of your presence counts as two risks.

STIR THE CROWD

When you attempt to inspire dissent against the Authority, roll +TALK. On a 10+, choose 1. On a 7-9, choose 2, or let your Director choose 1.

- It takes a tragedy to truly galvanise people.
- In doing so, you become known and targeted.
- You have no control or influence over any acts of protest.
- You are unable to spark wider resistance than the local area.

BUREAUCRAT

When you would **EXCHANGE BLOWS** with +TALK to slow someone down or distract them with regulations, bylaws, or whatever piece of red tape you can think of, you also choose two from the below even on a fail.

- You're not lying—they'll really be in trouble if they don't listen to you.
- They're invested in what you're saying: act in **confidence** against them for the rest of the Scene.
- They won't remember or recognise you.
- You don't need to take a *risk*.

IRREFUTABLE

When you argue or advocate for something and back up your point of view with hard evidence or facts, hold 1. When you reach 3 hold, you may spend them to **STRIKE DECISIVELY** with +TALK against someone who isn't *defenceless*.

CONNECTED

When you meet someone of note, roll +TALK. On a 10+, you're familiar with them, and you may choose whether their view of you is positive or negative. On a 7-9, as previous, but the Director decides how they think of you. On a 6-, things are bad: act in **desperation** against them for the rest of the Scene.

SHREE KLIME

During Downtime, you may also prepare an alias or disguise. Most people will believe you are who you say you are, unless you're disguised as someone they're very familiar with, or they are given reason to thoroughly check your person or any identification. During Downtime, instead of the usual benefit for a Scene, you may secure 2 of the following;

- You have ID that is either legitimate or so well faked it is impossible for anyone short of an expert to tell the difference.
- There's a reason or expectation for someone fitting your disguise to show up.
- You've had something useful planted ahead of time—select a weapon or piece of equipment (one you have access to) to be hidden just where you'll need it.

ARTIFICER

Between necessary repairs and wholly unnecessary tinkering, Artificers do their best to keep their allies equipped and their Astirs functioning.

LOOK

You look: *tough, filthy, punky, weary or wise*

You wear: *pristine overalls, casual clothes, patched jumpsuits, homemade armour*

You handiwork looks: *clean and utilitarian, fancy and artistic, like it barely holds together, unremarkable*

APPROACH

When fighting on foot, your **approach** is: **mundane**

GEAR

- 2 Artificer Tools
- 1 Transport or Service Ardent II
- Construct Manuals (**DISPEL UNCERTAINTIES** regarding construct & Astir design with **advantage**)
- Clothing that matches your look

Artificers ensure that the Carrier and the Constructs it carries are in top condition, repairing and tinkering with them whenever the chance arises. While talented at putting new things together, an Artificer's expertise is just as easily applied to taking something apart. Artificers might be professionals, trained in the construction and repair of Astirs, or natural tinkerers who grew up making jury-rigged improvements to their town.

While playing an Artificer, **EXPERTISE** lets you give everyone else room to breathe during Downtime, and **EXPERIMENTER** lets you occasionally give others the chance to tweak their Traits. Aside from that, you have some very versatile options: **ARCANE GENERATOR** and **JURY-RIGGER** let you control Astirs and quick construct things, and **COMBAT ENGINEER** even lets you branch out into the Scout playbook easily. Consider;

- Where and how did you learn your craft?
- Are there others as skilled at working with Astirs as you in the Cause? What about the Authority?
- How did you get involved with the Cause?
- What was your life like before the Cause?
- Have you always worked on Astirs, or did you hone your craft making something else?
- Do you have a certain material or style that is considered tell-tale of your work?

GRAVITY TRIGGER

When you tend to someone's body or Astir, advance a GRAVITY clock with them if you have one.

STARTING MOVES

You start with the **EXPERTISE** move as well as two others from your Additional Moves.

EXPERTISE

You're an expert at making and mending, and may perform an extra **INFIRMARY OR HANGAR** Scene during Downtime, as you repair and mend the things around you. Whenever you advance a long-term project to build, dismantle or modify something, advance it twice.

ARTIFICER TOOLS

- Heavy Wrench I (*melee / bane, impact*)
- Beam Cutter I (*melee / reload, ruin, decisive*)
- Steelfuser I (*ranged / restraining, elemental*)
- Alchemical Gel I (**advantage** when **COOLING OFF** to repair something)

PLAYBOOKS

ADDITIONAL MOVES

When you take a new move from your playbook as an advancement, choose from the list below.

FIELD TESTING

You're used to testing out new equipment, and can easily get to grips with new tech. You have **advantage** when trying to use, analyse, or figure out something about unfamiliar equipment, constructs, or similar magical machinery.

EXPERIMENTER

When you fail a Downtime Scene, you may pass 2 **tokens** to other players instead of 1.

When you remove a *peril* from someone, roll a d6. On a 5 or 6, they may adjust one of their Traits by +1 and another by -1 if they wish, to a maximum of +3 and minimum of -2.

COMBAT ENGINEER

You supplement your Artificer expertise with advanced combat training: for all purposes related to physical conflict, you are considered tier II rather than I. This includes wielding weapons, fighting, avoiding harm, and so on. Take a Custom Scout Weapon: it is tier II, and is either too heavy or requires too specific training for other people to use without taking **disadvantage**.

JURY-RIGGER

When you take random parts or objects and attempt to create something useful out of them, roll +KNOW. On a 10+, choose 3. On a 7-9, choose 2;

- It fits the purpose you had in mind.
- It stops working after hours, not minutes.
- It doesn't explode when it stops working.
- It doesn't look like garbage stuck together.

REFINED RITUALS

When someone **LEADS A SORTIE**, hold 3. You may spend this hold 1-for-1 to let an ally make the **SUBSYSTEMS** move for free.

ARCANE GENERATOR

You've built a remarkable artifact, small enough to be worn on your back or at your hip, that generates and sustains its own magical energy. You may power and control an Astir while it is working: you effectively have a CHANNEL of +1.

Additionally, when you tap into it to create something long-lasting, roll +KNOW. On a 10+, you can create a single object as large as it is simple (i.e small and complex like a clock, or large and simple like a wall), and it takes but a few minutes of work. On a 7-9, choose 1;

- What you create is *fragile* and will not stand up to attack well.
- Your device creates an unnatural magical feedback: the next person to roll +CHANNEL does so with **disadvantage**.
- The work is taxing—take the *peril* (exhausted).

IT'S A PROTOTYPE

Once per Sortie, you may reveal what prototype upgrade you've made to a Astir that you reasonably had access to recently. When you do so, choose 2;

- You didn't have to disassemble anything else for parts.
- Your invention doesn't draw unwanted attention to you.
- The upgrade burns out at the end of the Sortie, rather than after one use.
- Using the upgrade isn't dangerous in any way.

COUNTERSPELL

When you get close and use your expertise in magical machinery to try and disrupt or damage a magical ritual, enchantment or construct, you may **EXCHANGE BLOWS** and **STRIKE DECISIVELY** with +KNOW using the following profile;

- Counterspell III (*melee / set-up, slow, ruin*)

SCOUT

Scouts are straightforward people. Trained in navigating any terrain and path-finding for less mobile troops, scouts are often the eyes and ears for their Astir allies.

LOOK

You look: *wild, cold, sharp, cocky or brash*

You wear: *gleaming plate, well-worn uniform, survivalist's gear or rugged leathers*

You fight with: *brute strength, dexterous moves, practised discipline, raw tenacity*

APPROACH

When fighting on foot, your **approach** is: **mundane**

GEAR

- 1 Custom Scout Weapon
- 2 Scout Equipment
- Any tier I weapons that feel appropriate
- Clothes that match your look

CUSTOM SCOUT WEAPON

Design a +2 total cost weapon using tags of your choice from the list in the Equipment chapter. Describe its appearance and where you got it to the group, and tell them its name if it has one.

Scouts are more than the rank-and-file soldier. Trained to be fast, strong and capable, Scouts are the trailblazers and survivors that make it possible for everyone else to do their job. From sneaking into enemy territory to gather information to performing patch repairs on Astirs damaged in the field, a good Scout can work wonders.

While playing a Scout, your choice of starting moves let you stand toe-to-toe with things higher tier than you, even Astirs if you choose, more easily. Depending on the moves you take, a Scout can be a dangerous solo agent, leaning on moves like **IMPROVISATION** and **MOBILITY**, or a powerful team player with moves like **NATURAL LEADER** and **PATCH JOB**.

Consider:

- Are Scouts common, or are you an exception?
- Do you have a tool or ability that helps you be mobile, or are you just agile?
- What kind of reputation do Scouts have? Is fighting an Astir considered risky for you?
- Who didn't want you to fight?
- Who encouraged you to fight?
- How long have you been a soldier?
- Were you trained or are you a natural fighter?
- Where did you get your equipment?
- What drives you to work on foot in a world of mechs?
- Do you have a better relationship with regular soldiers due to not being a pilot?

GRAVITY TRIGGER

When you hold your own against something bigger than you or help someone in an Astir out of a tight spot, advance a GRAVITY clock with someone who sees you and is impressed.

STARTING MOVES

Pick either the **FIELD SCOUT** or **GIANT SLAYER** move, as well as two others from your Additional Moves.

FIELD SCOUT

You're an expert at managing operations in the field and supporting your allies. You're agile and strong, you tend to notice things those in Astirs don't, and your size allows you access to spaces too small for them. **READ THE ROOM** with **confidence**, always.

Your skill at combat is above and beyond that of other fighters, too: for all purposes related to physical conflict, you are considered tier II rather than I. This includes wielding weapons, fighting, avoiding harm, and so on. Your custom weapon is tier II, and is either too heavy or requires too specific training for other people to use without taking **disadvantage**.

SCOUT EQUIPMENT

- Maps & Tools (You can always find a way through or past)
- Aid & Repair Kit (You can tend to minor injuries or damages)
- Traps & Wards (You can always set up a defence given time)
- Blades & Bracers (You can always produce a basic weapon, *+ward*)

PLAYBOOKS

GIANT SLAYER

You have trained and honed your fighting skill to the point that you can easily go toe-to-toe with giants, Astirs and other huge creatures: for all purposes related to physical conflict, you are considered tier III rather than I. This includes wielding weapons, fighting, avoiding harm, and so on, though Astir-sized weapons might still present you some difficulty (given their sheer weight and size) unless the Astir was particularly small or you have a clever solution for leverage.

Your custom weapon is tier III, and is a huge, unique armament that you alone can wield as easily as any other. No other person can hope to use it well with just their mere hands.

ADDITIONAL MOVES

When you take a new move from your playbook as an advancement, choose from the list below.

TEAM PLAYER

When you **READ THE ROOM**, you may pass the information you gain along and allow an ally to act with **advantage** instead of you. This counts as them making a move involving you, and they may roll with +GRAVITY as appropriate.

MOBILITY

When you're fighting somewhere with the room to be acrobatic and mobile, roll +DEFY. On a 10+, hold 3. On a 7-9, hold 1. You can spend 1 hold at any time to do one of the following;

- Escape from something that binds, traps or impedes you
- Acquire high ground or a defensible position
- Get to somewhere or something before others can
- Avoid an incoming source of physical harm

IMPROVISATION

At the beginning of a Sortie, hold 3. You may spend 1 hold to change your **approach** for a single move. Explain to your Director what you did or used to do this.

NATURAL LEADER

When participating in a group move, you can always make the roll in place of whoever has the lowest relevant trait.

PATCH JOB

When you **COOL OFF** to remove a *risk* or the ‘overheating’ tick from an Astir, you can do it in a few moments rather than minutes, even while the Astir is still moving. Instead of the usual result, on a 7-9 you attract unwanted attention.

GUERRILLA

When you attempt to evade detection or sneak past others, roll +KNOW. On a 10+, choose 2. On a 7-9, choose 1, or choose 2 and take a risk.

- You avoid detection.
- You find something hidden or forgotten.
- You can set up for an ambush.
- You find a way to allow others to follow you without being detected.

PATH-FINDING

When you're leading a group that is travelling a long distance, hold 3, and spend it 1-for-1 on the following options while you travel;

- You lead the group past an area of difficult terrain without issue.
- You find a comfortable, sheltered place to set up camp.
- You're familiar with the area; **DISPEL UNCERTAINTIES** regarding it or the things in it with **advantage** during the journey.
- You find a shortcut, reducing the length of your journey but adding complications.

CANTRIPS

Cantrips are moves not assigned to a particular playbook. Whenever you choose a move, including those chosen when picking a playbook, you make instead choose from the Cantrips list.

If you don't have a CHANNEL trait, you may still pick a Cantrip that is rolled with +CHANNEL. When using it, explain what device, enchanted item, or otherwise allows you to wield magic in this way and act as if you had a CHANNEL of +1.

CANTRIPS

DUELING MAGIC

If you are outside your Astir and fighting on foot, you can **EXCHANGE BLOWS** and **STRIKE DECISIVELY** with +CHANNEL when attempting to cause physical harm, using the following profile;

- Hand-casting II (ranged / area)

DON'T DIE YET

When you enter battle with a group of allies, give up to four people (including yourself) **advantage** when they next **BITE THE DUST**.

SEEK ALLIES

Once per Sortie, you may summon a cadre of creatures, spirits, elementals or otherwise to assist you in combat. When you do so, you may act as a squad until the end of the scene.

BEWITCHED WORDS

When you lace your words with magic to persuade, deceive, inspire or intimidate, you may roll +CHANNEL in place of +TALK. Using magic to exploit someone in this way is just as bad as using magic to hurt them, and will be remembered as such.

HASTE

If there is a question of who acts first in a situation, the answer is you. If multiple characters with **HASTE** are all attempting to be the quickest, they act simultaneously.

DENY

When you use magic to temporarily restrict the actions of another, roll +CHANNEL.

On a 10+, you prevent them from taking a single action or move.

On a 7-9, as above, but you or someone else rushes to act against them in **desperation**.

FIRE-EATER

You may take a *peril* (seared, volatile, overcharged) to untick 'overheating' from your Astir and act with **confidence**.

ALL IN

When you have **advantage** on a move, you may take an additional **advantage** at the cost of also acting in **desperation**.

LIFESENSE

You have a keen sense of where all living creatures around you up to *sniper* distance are, as well as roughly how strong their life force is—living things close to death, for example, seem more faint and difficult to conceive of in this way.

TRUTH-MAKING

When you **READ THE ROOM**, on a 12+ you may answer one of your questions yourself—though your answer must be within the relative realm of possibility.

CLASSICAL SPELLCRAFT

Choose a Basic Move: while out of your Astir, you may roll it with +CHANNEL instead of the usual Trait. If things go wrong, your magic backfires.

ADVANCEMENT

In Armour Astir, characters earn advancements in three ways;

- Completing a GRAVITY clock
- Compromising, sacrificing or outgrowing a Hook
- Spending 6 Spotlight, earned on a 6-

Advancements can be spent on the following options, once each;

- Choose an Additional Move from your playbook or from the Cantrips list.
- Choose an Additional Move from your playbook or from the Cantrips list.
- Choose an Additional Move from your playbook or from the Cantrips list.
- Choose an Additional Move from another playbook or from the Cantrips list.
- Increase a Trait by 1, to a max of +3.
- Increase a Trait by 1, to a max of +3.

After you have advanced and chosen from the above options 3 times, you may also choose from the following additional options.

- Choose a new Move from the Soldier Moves.
- Choose a new Move from the Soldier Moves.
- Choose a new playbook. Keep what moves you and your Director agree are truly part of your character, and discard the others. Replace them with the starting moves for your new playbook. You do not gain its starting equipment.
- Choose a new character: your old one retires from play according to their Hooks, and passes one of their Moves onto your new one.

SOLDIER MOVES

GET OUT OF MY WAY!

When you come to blows with your Rival, see someone you have a GRAVITY clock with die, or witness the Authority commit a truly terrible act, hold 3.

You may spend this hold 1-for-1 to **STRIKE DECISIVELY** against non-Rival or Main foes, even if they aren't *defenceless*, and treat any result of 6 or below as a 7-9.

RED COMET

Any Astir you channel gains an extra Artifact part called 'Uncanny Speed', and its Power capacity is increased by 1.

FLASH

You may communicate with other Channelers instantly over great distances in times of urgent need, sending words or even feelings and sensations to **HELP OR HINDER** faster than anyone or anything else can act: so quickly, in fact, that you may do it after a roll has been made.

Additionally, dead characters may still **HELP OR HINDER** you, their spirit able to speak with you from beyond.

SELFLESS

You may put yourself in *peril* to completely defend another from one source of incoming harm, like a blade or a challenging statement, however severe it is.

You may put yourself in *peril* to attempt something uncanny, superhuman, or unbelievable.

INDOMITABLE

Whenever you make a move, on a result of 12+ you may clear a *risk*.

PLAYBOOKS

WHITE DEVIL

Stories of your talent and your Astir have spread far and wide among your enemies: anyone other than your Rival who would act against you whilst piloting your Astir must take the *risk* (intimidated) to do so. This risk is cleared if they witness your Astir be seriously damaged, if you flee from fighting, or if they have reason to believe you aren't piloting it.

NIGHTMARE OF SOLOMON

You have acquired a weapon of horrific potential. When you deploy it to destroy your enemy with overwhelming force, you succeed. Resolve all your GRAVITY clocks as if you had filled them, even ones that have been previously committed to and locked. No advancements are gained for clocks resolved in this manner. In the future, no matter how noble your intent or just the results, your actions will be used to justify further violence.

THE ARITY METHOD

Once per Sortie, when you would **BITE THE DUST**, succeed as if you'd rolled a 10+. Act with **confidence** and **advantage** the next time you would **EXCHANGE BLOWS** or **STRIKE DECISIVELY**.

ORIGINAL VIDEO EPISODE

During Downtime, you may lead a raid or operation against the Authority to disrupt their activities as your Downtime Scene. Tell the Director what you set out to do, and who comes with you. If it's anyone you have GRAVITY with, advance it. During the next Conflict Turn, the Cause may start a Conflict Scene of their choice with one success already.

ONCE THE WAR'S OVER

When you talk about what's waiting for you after the fighting's over, hold 3.

You may spend your hold 1-for-1 to automatically succeed on any move as if you had rolled a 10+.

Whether or not you spend your hold, you will perish before the beginning of your next Downtime. Don't roll to **BITE THE DUST** as usual—instead, let your Director know when you think it's time.

THAT'S DIALECTICS

You take over another Faction of the Cause, and steer them towards something impressive. Start an 6-step long-term project clock. Once it's filled, your next **PLAN AND PREPARE** succeeds as if the group had rolled a 10+ and you gain every listed benefit regardless of how much hold is available. You also may then **LEAD A SORTIE** in **confidence** for as long as the Faction remains in the Cause, as they fight alongside you.

You must work on this project at least once per Downtime when possible: otherwise your influence over the other Faction dwindles, and the clock is reduced 1 step.

MIDSEASON UPGRADE

The opportunity to acquire something of immense power and value will present itself to you. It might be a tier IV Astir, a legendary Ardent, some other kind of powerful magical artifact or something of more mundane importance.

FISHER OF MEN

When you **STRIKE DECISIVELY** and succeed, you may impose one of your Hooks on the other party if they survive. If that character belongs to a player, it does not count against their usual limit of three Hooks.

CONFLICT & TIERS

As a game largely about getting into magical mechs and fighting fascism, much of the interaction between players and other characters (during Sorties at least) will involve them in various kinds of conflict or negotiation. In Armour Astir, much of this will largely fall under the purview of two moves: from friendly duels to fights to the death, from lying to avoid suspicion to addressing a nation.

In the fiction, players will **EXCHANGE BLOWS** to set opponents up, wear them down, give an argument strength or cast doubt, then **STRIKE DECISIVELY** to land a killing blow, dismiss an argument entirely, or otherwise follow through on opportunities opened up by their earlier exchanges.

Mechanically, players will **EXCHANGE BLOWS** to make an opponent *defenceless* by giving them a number of *risks* or *perils*, then **STRIKE DECISIVELY** to remove them as a threat according to the fiction.

Of course, there are many factors at play that might affect how the rolls behind these moves go down. Physical conflicts are affected most obviously by physical things: by the weapons being used as well as what kind of protection those involved have to rely on. The terrain, relationships, weather, and so on might also come into play. Anything settled with words is likely to be affected on a more circumstantial basis: by what is being said, who it is being said to, and countless other little factors.

What this largely boils down to is having one or more levels of **advantage** or **disadvantage**, or if you're particularly lucky (or unlucky) the ability to act with **confidence** (or **desperation**). See Opposing With +CLASH and Opposing With +TALK below for specifics on things that might affect these rolls.

Affecting both equally are Tiers, the embodiment of what kinds of creature or object something can, broadly speaking, be considered in the same league as. Fighting something below your tier is far easier (see: an Astir stomping on a man), whilst fighting something above your tier is far harder (see: a man trying to stomp on an Astir). See Tiers below for more information.

Just as complex spells often require intricate rituals and awkward somatic gestures, the magic used to power an Astir can be augmented by intentionally complicating its design. ‘Flourish components’, as they are referred to, sometimes take the form of odd, restrictive design choices, and sometimes look like compact rube-goldberg-esque contraptions that contribute somatic components to an Astir’s spells.

Regardless of their differences, they can largely be described as additions to an Astir that serve no true function, their lack of purpose providing a supplementary source of magical energy. I am told that new Channelers, at schools abreast of such advancements, are given a stern warning: be wary of Astirs with capes.

- Excerpt from ‘Efficient Inefficiency: Practical Applications of the Flourish Theory’, Prof. Keller June, ERA3/1 (Lilac)

CONFLICT & TIERS

OPPOSING WITH +CLASH

When it comes to literal combat, weapon ranges and **approaches** are the primary thing to consider. Many tags also offer benefits when using certain moves or fighting in certain situations.

RANGES

Weapon ranges, largely, define if you can trigger moves like **EXCHANGE BLOWS** or **STRIKE DECISIVELY**. They might also have relevance in attempts to intimidate or threaten: a smart foe might know full well that you're bluffing with a weapon they have little to fear from.

- **Melee:** This weapon is used to physically hit targets at close range.
- **Ranged:** This weapon is used to hit targets from a medium distance or close up.
- **Sniper:** This weapon is used to shoot at targets from a long or medium distance.

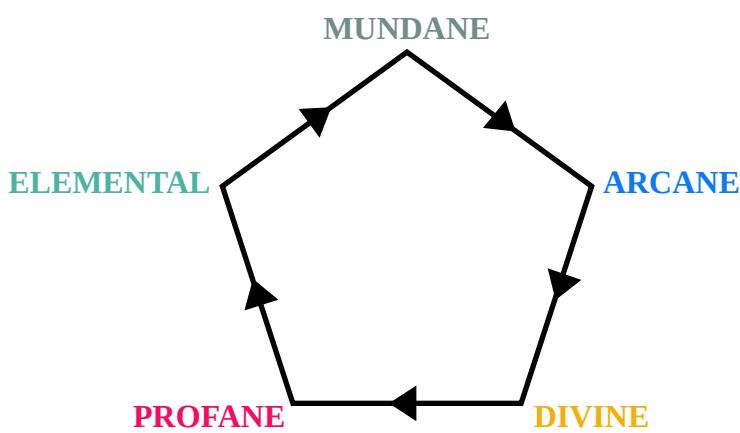

Range tags are relative to the tier of the weapon—an Astir-sized sword with *melee* range can strike something a lot further away than a sword wielded by a person, for example. *Ranged* and *sniper* weapons mounted on something higher tier than them are re-tuned so that their range bands are relative to their new housing.

APPROACHES

There are, in the broadest of senses, five **approaches** to combat. Each is particularly effective against another, but in turn vulnerable in the same way. You act with **confidence** when facing an **approach** yours is strong against, and **desperation** when facing an **approach** that is strong against yours. They are:

- **Mundane**, the **approach** of those with blades, bows and shields, which cuts easily through **arcane** defences meant to protect against magic with simple steel.
- **Arcane**, the **approach** of those who weave pure unsuspected magic, which pierces the domains of the **divine** well, having long since been stolen from them.
- **Divine**, the **approach** of those with a godly sponsor, which scours the **profane** from our world quite readily, holy powers being anathema to those of the dark.
- **Profane**, the **approach** of those who consort with the unkind and the forgotten, which is effective against the natural forces of our world, and as such easily smothers **elemental** magic.
- **Elemental**, the **approach** of those wielding fire and frost, which easily subverts **mundane** defences that rely on materials that warp, conduct and shatter under the elements.

You might work on a long-term project to change the damage type of something, or frame a Downtime Scene **SOMEWHERE ELSE** to find a quick way do it temporarily.

On foot, your **approach** is typically defined by your playbook. Ardents, Astirs, Carriers and other magical constructs have their own **approaches** which override yours when you're fighting in them.

OPPOSING WITH +TALK

When trying to achieve things with words, the tags on your gear and weapons tend to be less important (though if intimidation is your chosen avenue, this might not be the case). What matters more is what is being said, who it is being said to, what kind of person they are, and so on.

DEBATE ME

When you're using **EXCHANGE BLOWS** or **STRIKE DECISIVELY** to persuade, intimidate, deceive, inspire and otherwise use words get your way, it's very important to keep the facts of your fiction in mind. Rugged mercenaries are less likely to cower under intimidation than shy scholars, and it's harder to negotiate with an expert merchant than someone with barely a sale to their name: situations like these are where **advantage** and **disadvantage** might often come from when using +TALK. You should feel free to suggest these to your Director when they arise.

When opposing someone with +TALK, **approach** doesn't matter. Unless you decide it does for some reason, in which case: refer to the above +CLASH rules for a reminder on that.

STRIKE DECISIVELY notes that on a success your foe is removed as a threat according to the fiction. When rolling with +TALK, the fiction will typically be that they truly believe what you've said, are willing to carry out some instruction or bow under threat, etc. As such, **STRIKING DECISIVELY** in this manner means the character will do what you wanted and then cease being a threat to you. This might mean they stand aside, retreat, are so well-convinced of your disguise they no longer suspect you at all, or so on: whatever it is you wanted, you get it for the rest of the Sortie.

Characters must still be made *defenceless* for this to happen. In social circumstances, the *risks* and *perils* you inflict to do so are likely to be very different to the ones you inflict in actual combat. You might mention a name that makes someone *uneasy*, imply violence that leaves someone *scared*, or speak with courage that inspires *confidence* in someone you're trying to instruct. That's not to say *dangers* of a more physical nature don't effect social engagements and vice-versa: someone already hurt could be easy to intimidate, just as someone who is scared might falter in battle.

Additionally, *risks* and *perils* might be a way to get what you want temporarily or to a smaller effect: you might **EXCHANGE BLOWS** and make someone *fooled* or *charmed*, but remember that this is never going to be as reliable or permanent as securing a result with **STRIKE DECISIVELY**.

TALKING TO GOD

While weapon tags like *bane* and *ruin* provide an avenue of overcoming tier differences (see Tiers on the next page), those differences also apply when you're **EXCHANGING BLOWS** or **STRIKING DECISIVELY** with +TALK. If you're just one person, it can be hard to sway the entire crew of a Carrier, intimidate someone in an Astir, or lie to a deity. There are, of course, plenty of situations where those differences break down though. If you are someone in a position of authority over them that crew might listen to you immediately; if you know the trigger word for an explosive rune etched onto that Astir, you have leverage behind your threat.

For that reason, when rolling with +TALK, you may treat words as having the *bane* or *ruin* tags where appropriate, or even ignore the tier rules altogether if the situation calls for it.

CONFLICT & TIERS

TIERS

In Armour Astir, there are five tiers things usually come in when it comes to conflict, reaching from tier I (characters) to tier V (carriers). Weaponry within each of these categories is described relatively—that is to say, in general, a Carrier-sized weapon with *area* has a much larger effective radius than a person-sized weapon with *area*—because close range between two people is a lot smaller than close range between two Carriers.

- Tier I covers any creature of around vaguely human strength and resilience.
- Tier II covers simple magical constructs and people particularly talented in combat. Monsters that might threaten two or three people alone could be tier II.
- Tiers III and IV are Armour Astirs; large, magically-animated suits of armour that are piloted by someone with magical ability, referred to here as a Channeler. Monsters with tough hides or magical protection might be one of these tiers.
- Tier V is the realm of vessels and vehicles on a grander scale than any single construct - ships, trains, or other interesting creations, that often carry and deploy constructs or Astirs into battle. Carriers, like the one the players have, are tier V. Immense creatures, like krakens or really big dragons could be considered tier V.
- Tier VI covers things beyond Carriers or Astirs. They are things men might call unfathomable, or unknowable—but men designed them, men lifted the timbers, and men guided them until they could walk. It is not the shape or definition of the divine that makes them beyond us.

You should feel free to include exceptions to the above in your game. Ardents of a higher tier that can go toe-to-toe with Astirs more readily, smaller Carriers or ships that are only tier III/IV, and other things can be interesting to think about: what does a tier V person look like?

Typically, you can only use things of the same tier as you unless a move specifies otherwise, or unless you're 'inside' of something that is a higher tier: a construct, an Astir, a defensive emplacement, etc. Using equipment that is lower tier than you does not bring it up to level: if a tier III Astir picks up a tier I dagger in its big stone fingers and tries to stab another Astir with it, the only thing that's going to break there is the dagger.

LOWER VS HIGHER TIER

People, monsters, weapons and so on have a tier—typically the same as its intended users. These tiers reflect what they are typically effective against: tier III weapons are built to fight tier III things, and so on.

When using moves like **EXCHANGE BLOWS** or **STRIKE DECISIVELY** to attack something a tier above you, make that move with **disadvantage**. If your opponent is two or more tiers above you, you simply don't pose a reasonable threat to them: your move fails, and you must **BITE THE DUST**. An exception to these rules can be made if there's a reason your foe would be left vulnerable to you despite their advantage: an open Astir cockpit, a personal connection, an unguarded back, etc.

Another exception to this rule are weapons with the *bane* and *ruin* tags, which make them effective against targets of one and two tiers higher respectively. Both tags only make up for being a lower tier: they don't increase it.

HIGHER VS LOWER TIER

Working the other way around basically works in the opposite direction. Take **advantage** when acting against something of one tier lower than you; if they're two or more below, skip **EXCHANGING BLOWS** and go right to **STRIKING DECISIVELY**.

If all this is a bit much at first, the important thing to remember is that if you want to hurt something one step tougher than you, you need *bane* on your weapon. If you want to hurt something two steps tougher than you, you need *ruin*. If you want to hurt something three or more steps tougher than you, you need a plan.

TAGS & GEAR

Equipment in Armour Astir is distinguished by a few things. While weaponry has specific ranges and types of damage, all equipment also has tags. These tags help define an object in terms of narrative effects as well as more specific mechanical ones. Feel free to the lists below with options of your own to better suit your campaign and setting, as well as the tastes of you and your players. Neither list is by any means exhaustive.

Some tags offer a specific mechanical effect, whilst others are simply descriptive. Don't let this convince you narrative-focused tags cannot have a mechanical effect, though: consider the effects on your story their descriptive nature might lend! They might make triggering moves possible, provide vectors for other action, or give you a good excuse to give your Director a wink and a smile and say "wouldn't x give me **advantage** here, don't you think?". Though, keep in mind, your Director is well within their rights to use them to impose **disadvantage** on you instead. Trying to, say, enact careful and precise violence with something that's messy might be a little harder than you'd like.

UNARMED COMBAT & TIER

Generally speaking, your fists (or whatever other part of your body you want to hit people with) are the same tier as you. You, Dear Reader I, have Fists I. When a carrier, the Little Flourish V, crashes into something, it is hitting it with Several Hundred Tonnes Of Steel and Ceramic V. When a move changes your tier—for example, the **GIANT SLAYER** move making a Scout count as tier III—this also changes the tier you are fighting at without a weapon.

This does not necessarily mean you can punch clean through an Astir, though: fists are fists, and bringing your hands to a swordfight means your Director is likely to impose some limits or negative modifiers to your moves unless you have some way of making up for your reduced reach and the fact that punching metal sucks really bad.

ACQUIRING EQUIPMENT

Typically, there isn't anything for sale on board your Carrier. Okay, there's probably a quartermaster you could requisition things from, if you're willing to wait for it to be shipped out, and maybe you could persuade a private merchant to tag along—but in general, when you want to buy something you need to go and find it. The **SOMEWHERE NEARBY** Downtime Scene is generally how this is done, with options for finding things available locally whether they're common or difficult to find.

Objects have a value that determines how costly to acquire they will be. Generally speaking, the higher an object's value, the richer a place you'll need to go to find it: small farming towns do not sell legendary artifacts, usually. Value is provided for all example equipment below, and determined as follows:

- Equipment like weapons, Astir parts, and so on have a starting **value** equal to their Tier—a Tier III object has a starting **value** of 3, etc. The *valuable* and *treasure* tags then increase this by a further +2 or +4 respectively.
- Ardents, Astirs and Carriers have a **value** equal to their Tier squared (a Tier III Astir is 9, while a Tier V Carrier is a whopping 25), and are made using the same creation rules as those developed during character creation. Additions beyond that must be bought separately.

As a reminder, **SOMEWHERE NEARBY** functions as follows:

SOMEWHERE NEARBY

The leading player rolls a d4 to see what resources they can muster, and acquires gear or equipment with a total **value** up to the result. They may spend extra **tokens** or tap Factions to increase the result by another d4, or trade objects with the *valuable* or *treasure* tags for +2 or +4 respectively. They frame a short scene around this, either alone, or with invited characters.

During the scene, anyone may spend a **token** to choose one:

- Buy or trade for something of value, as above.
- Start or advance a long-term project: describe what your work looks like.
- Spend time working or in the field with someone you have GRAVITY with, advancing it.
- Run into trouble: resolve it with moves as usual, and see what you learn.

TAGS

Gear tags have a cost (+1, etc) that denotes roughly how beneficial or powerful the effect is. These tags must balance out to 0 overall: meaning positive tags must be paired up with negative ones. Feel free to combine tags and rewrite them as something that represents multiple effects, or create new ones wherever it suits your campaign. Many playbooks start with gear that ignores these restrictions: that equipment is special! Hold onto it.

Some things don't have tags at all, because they do something specific it's easier to just explain.

-2 TAGS

Heavy drawbacks that largely restrict an objects usefulness or availability.

- *Cursed*: You cannot wield anything else once you raise a cursed weapon, and it becomes bound to you until the curse is broken. When you die it will consume your essence, probably.
- *Dangerous*: Volatile or difficult to use safely, *dangerous* objects invite dire consequences if not used carefully. Once per Sortie, the director may upgrade a risk you acquire while using something dangerous to a peril.
- *Dreaded*: This weapon has a history and a reputation that stains it, and stains you as long as you're carrying it. People will treat you with fear and apprehension.
- *Huge*: Basically impossible to move around without help. Absolutely not something you are ever going to hide, either.
- *Junk*: In such a terrible condition it cannot be used. You may remove this tag with a 6-step long-term project.
- *One-Use*: Can only be used a single time per Sortie—perhaps it needs time to recharge, or uses rare ammo, or explodes.
- *Treasure*: Highly valuable—and a gold, glittering target on your back. Increases **value** by +4.

-1 TAGS

Almost entirely negative tags that make an object less useful, more dangerous to have on your person, prone to damage or failure, and so on.

- *2H*: Takes both hands to use properly, though not necessarily just to carry.
- *Bulky*: Large (relative to tier) and difficult or awkward to move around.
- *Drain*: This object draws excessive power from an Astir, and reduces the Astir's **Power** by 1 while equipped. Objects can have this tag multiple times, increasing the reduction.
- *Distinct*: Impressive, loud, or just particularly memorable, *distinct* equipment is hard to be subtle with. Might make you easy to track or follow, or ruin your attempts at stealth.
- *Slow*: There is a delay involved in this objects use, like the travel time of a projectile, or the low speed of a construct. Might, for example, impose **disadvantage** where speed matters.
- *Limited*: You have a particularly *limited* supply or use of this thing—it always seems to run out at the most perilous moments.
- *Messy*: Something messy is imprecise (or indiscriminate), and could have excessive (or intimidating), unwanted results.
- *Intimate*: Requires you to get up close and personal, making it hard to use against anyone wielding something with better reach—or anyone just trying to keep their distance.
- *Fragile*: Easily broken, either by shoddy design or frail materials.
- *Forbidden*: Forbidden objects are banned by the Authority, and possession of them or suspicion of such carries a heavy price.
- *Set-Up*: Make moves using this item at **disadvantage** unless you spend time prepare or arm it in some way. In battle this might only be a few moments, but it can make all the difference.
- *Reload*: After firing, this weapon requires you to manually reload it or perform some other action to ready it for use.
- *Unreliable*: This object is prone to failure and breakdowns—make your first move with it each Scene in **desperation**.
- *Weak*: Lacking in physical impact, and generally useless for piercing armour or cover.
- *Valuable*: Expensive to acquire, and fairly sought-after. Increases **value** by +2.

TAGS & GEAR

+1 TAGS

These tags have strong beneficial effect. You'll likely need to balance them out with -1 tags, unless you're intentionally making something uncommonly powerful and valuable.

- *Adapted*: This object has been modified or designed to let it overcome the difficulties of certain environments—it might be an amphibious Astir with an air supply, an Ardent designed to keep its occupants cool in searing-hot terrains, etc.
- **Arcane/Divine/Elemental/Mundane/Profane**: This tag changes your approach to the listed one while you're actively using it.
- *Area*: This weapon affects a large area: while any melee weapon might hit multiple people stood right next to each-other, an area weapon might slice through an entire crowd or several spread-out foes.
- *Bane*: You suffer no penalty against opponents one tier above you when attacking with *bane*.
- *Blitz*: You may spend this tag once per Scene to make a move with **confidence**.
- *Concealable*: Easily hidden—a casual inspection will rarely if ever find it.
- *Decisive*: Decisive weaponry is precise and powerful, excellent for ending fights. Once per Scene, you may reroll a failed **STRIKE DECISIVELY** when using it.
- *Defensive*: Defensive weaponry is excellent for keeping foes at a distance, parrying their blows, or suppressing them. Once per Scene, you may reroll a failed **EXCHANGE BLOWS** when using it.
- *Impact*: This weapon packs a heavy physical punch, capable of knocking foes down or away easily, and will dent or break through surfaces.
- *Infinite*: This thing either doesn't use ammo or power to function, or uses such small amounts relative to your supply that it is practically endless. You're never in danger of running out as a result of a roll.
- *Guided*: This weapon has guided strikes or projectiles, allowing you to take a 7-9 result when you **EXCHANGE BLOWS** and **STRIKE DECISIVELY** rather than rolling if you wish. Guided projectiles are reliable, but leave little room for finesse.
- *Mounted*: This weapon is mounted or worn in some way that frees up the hands of the user for other tasks. As a result, it's also difficult to disarm a target of without breaking it.
- *Restraining*: Can restrict or slow targets down in some way, making it hard for them to escape or move without expending a lot of effort.
- *Refresh*: Objects that *refresh* can only be used once per Scene, but automatically replenish or restore themselves even if they are destroyed or wasted (they cannot be taken away from you by a *peril*).
- *Ward*: You may use this tag once per Sortie to reduce an incoming source of harm from a *peril* to a *risk*, or from a *risk* to nothing.

+2 TAGS

The big deal. These tags have a clear, strong effect, and as a result are going to be uncommon on all but the strongest or most drawback-laden equipment.

- *Ruin*: As per *bane*, but up to two tiers higher rather than one.
- *Versatile*: This tag combines the effects of *decisive* and *defensive*.
- *Vorpal*: Vorpal weaponry is exceedingly lethal: you may use this tag once per Sortie to upgrade a *risk* you'd inflict to a *peril* instead.

REGARDING VALUABLE AND TREASURE

Valuable and *treasure* are a pair of tags that make equipment more expensive to acquire. They are -1 and -2 cost tags respectively since this increase in difficulty should be represented as a balancing factor when it comes to tag costs.

On equipment you don't pay for—i.e., equipment you or your Astir etc starts with—these tags can look like a 'free' way of balancing out positive tags. They are not. People like having expensive things, and many people will go to great lengths to acquire them without paying. If your players are carrying around *valuable* or *treasured* equipment often, look for opportunities to redistribute their wealth.

TIER I EQUIPMENT

Tier I equipment is intended for use by people, like humans, elves, whatever brand of furry lives in your setting or other similarly scaled characters. It is generally easier to find than higher tier equipment, and often cheaper too. Since the focus of this game is largely on combat between Astirs, tier I equipment is largely abstracted.

A tier I weapon will typically have a range and possibly one or two tags from above. All playbooks receive a weapon, but some additional examples can be found below.

To some degree, feel free to just wholesale make up what tier I weapons exist in your world, because unless you're doing it to try and gain a large advantage on a roll or to try and deus-ex-machina your way out of a bad situation, you probably can't break anything badly enough that it matters. Take that fire sword. It's cool.

EXAMPLE TIER I WEAPONS

Infantry Weapon I (melee)

Simple, sturdy weapons like blades and clubs.

Dagger I (melee / intimate, concealable)

A concealable dagger, easily worn beneath clothing and thrown if needed.

Greatsword I (melee / area, 2H)

A large weapon, with good reach and weight, perfect for taking heads. Praxis.

Armourbane I (melee / fragile, decisive)

A thin, pretty blade, good for slipping between armour plates.

Enchanted Blade I (melee / distinct, bane)

What was once simple steel now carries the unmistakable sheen of ritual.

Partisan I (melee / defensive, 2H)

A long spear, perfect for keeping your friends safe and your enemies at a very specific distance, as the saying goes.

Bow I (ranged / decisive, 2H)

For when you don't need anything fancy, a bow is perfectly capable of doing the job for as long as you have arrows.

Sidearm I (ranged / defensive, weak)

The typical protections afforded to Astir pilots: a reliable tool capable of firing bursts of light arcane energy.

Raypistol I (ranged / limited, bane)

A powerful but short-lived firebolt wand, fitted with a comfortable grip.

Boltrifle I (ranged / blitz, 2H)

Effectively repeating crossbows fed by lightweight 'barrels' of ammunition, bolt rifles are a common sight among troops of any real armed force.

Rayrifle I (sniper / reload, ruin, 2H)

A heavy rifle, often using magical crystals or wands as charge for a single shot. Their bulk, heavy recoil and cost makes them highly uncommon, but not overly so: after all, little else hand-held will put a hole through an Astir.

Ashstaff I (ranged / area, bane, unreliable, 2H)

A large, shoulder-carried staff charged with incendiary magic. A little lighter and easier to use than a rayrifle, but still fairly bulky and lacking in the ability to pierce the protective wards of Astirs.

TAGS & GEAR

EXAMPLE TIER I GEAR

Luxury Gift I

For good first impressions, making up for bad ones, or just plain bribery.

Farspeech Stone I

Stones of Farspeech allow you to communicate over great distances with the holder of a linked stone. Most are enchanted to be linked only to one other stone, but more expensive versions can be linked to as many as the owner requires.

Construct Sensor I

Circular tables with a surface constructed of an array of enchanted steel pins. The pins independently slide up and down when unregistered Constructs are detected in a certain radius, creating a rough three-dimensional relief of oncoming forces. The height of raised pins correspond to the size of a detected constructs, and larger tables with denser arrays allow for more precise reliefs.

Latch I

Basically handles enchanted to lock into place when pushed against something magical, Latches are typically used by ground forces to hitch a ride on constructs that don't have room for them to ride inside of. Also available as a pair of weaker Latches, built into a glove and boot, so that the wearer may simply hold a hand and foot against a construct to attach to it.

Grappling Hook I (Allows you to climb or grapple)

A small sturdy grip attached to a barrel loaded with an steel hook, which is propelled by forceful magic. An attached cord can then be reeled in, allowing the holder to quickly relocate.

Invisibility Cloak I (fragile, valuable, lets you be invisible)

Generally speaking, doing just about anything is cooler whilst invisible.

Arcane Charge I (ruin, one-use)

A destructive spell delayed by a wax timer. Stick it on an Astir, light the wick, and run for your life.

TIER II EQUIPMENT

The most common way players and other characters might make themselves tier II is by piloting an ardent: a sort of magical vehicle or construct. There are some examples of ardents on the following page, but here's some examples of tier II weapons that might be used by a player with the Scout playbook, or might be found as emplaced weapons mounted in a fortress or some other defensive position. To create an Ardent, choose an **approach** and two Parts or Weapons from the Astir creation rules that do not cost **Power**, or make up your own. Ardents and their weapons are tier II.

Baneblade II (melee / bane, 2H)

Most Astir pilots do not concern themselves with the scrambling of foot-soldiers. Some of these pilots meet very unexpected ends.

Might also be: Blowtorch, Enchanted Broadsword, Bolt Gauntlets

Warp-Slinger II (ranged / blitz, infinite, huge)

An emplaced device incorporating multiple wands linked to a simple firing ritual that can be triggered by even those not gifted with magic.

Might also be: MG Turret, Point Laser, Multi-Crossbow

Ardent Rifle II (ranged / bane, 2H)

A large two-handed tool that fires searing bolts of light, capable of burning through even an Astir's defences. Typically used by ardents, due to its weight.

Might also be: Arbalest, Flame Staff, Greatbow

Seeker Cluster II (ranged / guided, defensive, reload, messy)

Guided by a faint magical intelligence, this device lets loose a swarm of small magical crystals to hound a particular target. Though they struggle to pierce armour, these crystals shatter on impact, resulting in sharp shrapnel.

Might also be: Orbiting Motes, Shock Rod, Command Bracelets & Drone

TAGS & GEAR

ARDENT NAMES / TAGS

Steed Ardent II *mundane*

- Iron Hooves II (*melee/ small, blitz*)
- Steel Plating II (+*ward*)

A large, horse-shaped mechanism driven by simple magic. Steed Ardents are no faster than a normal horse, but never tire or want for food, making them much easier to maintain.

Might also be: Armoured Horse, Motorbike, Personal Shuttle

Transport Ardent II *mundane*

- Cargo Hold II (*spacious*)
- Standardised Parts II

For moving things from point A to point B - just make sure you have an escort.

Might also be: Van, Trader Caravan, Cargo Shuttle

Service Ardent II *arcane*

- Ardent Fists II (*melee / intimate, blitz*)
- Condenser Stave II (*ranged / infinite, 2H*)

Service Ardents are large, roughly humanoid constructs, designed to perform heavy lifting and assist infantry forces without impacting their resupply costs much.

Might also be: Loader Frame, Exo-suit, Industrial Drone

Tank Ardent II *arcane*

- Salvo Stave II (*sniper / area, bane, messy, reload*)
- Hexplate II (+*ward*)

Protected by heavy metal plating and carried by large, flexible legs, Tank Ardents are capable of launching explosive magical spells over a long distance.

Might also be: Tank, Fighter Jet, Artillery Platform

THE CARRIER & ASTIRS

THE CARRIER

Your Carrier is the place you call home—it's the base of operations you return to between the fighting to rest, recuperate, and hopefully not fight with your friends instead. Your Carrier might be a large ship, flying fortress or other huge vehicle, and is probably powered by a complex blend of magic, alchemy and simple human ingenuity—most importantly, meaning it doesn't require a Channeler to helm it, freeing them up for active service. It is in many ways your most valuable asset.

Your Carrier typically has enough room to store an Astir (or another ‘vehicle’, like an ardent, a magical carriage, or a horse I guess) per player, and room for any Director characters who journey with them to store their own. It's also assumed to have enough room for each player character who lives there to have their own space—though how large or comfortable this is might vary. The ship's regular crew might not be so lucky. Your Carrier is your home, but that doesn't necessarily mean it's a safe place. Players should be prepared to defend it, and should think about how best to do so. At the very least, it contains a small armoury so that all crew members have access to a simple blade, crossbow, or whatever passes for self-defence in your setting.

MECHANICALLY SPEAKING...

A Carrier is made up of a few things:

- A CREW Trait, starting at +1. Like other traits, it has a maximum of +3. You can also work on a long-term project to increase CREW by 1—it's an 6-step clock, and could represent training, developing new equipment, or something else. CREW might also be lowered should staff be killed or hurt, or if the Carrier is damaged heavily. When the crew acts in your defense or covers for you, you may make a move using +CREW instead of the usual value: they'll do this an amount of times per Sortie equal to the Trait (two times at +2, etc).
- Weapons (for knocking Authority ships out of the sky).
- Quarters, which provide various benefits. You'll start with some of these if some of your players are playing Support playbooks, and choose what benefit they provide.

CREATING A CARRIER

Creating the Carrier, in at least these first few steps, is a group task. Players will decide what kind of craft their Carrier is (and the Director should take this into account when deciding what kinds of Carriers and similar crafts the Authority uses). Once that's out of the way, you have a few initial choices to make between you.

CARRIER TYPE

Firstly, you'll want to decide broadly what kind of craft or vehicle your Carrier is. This is mostly a fiction decision, and will inform where it can go and what kind of places it might take you to—things that, naturally, should tell your Director what types of places you're interested in going to.

- Flying: Lifted through the sky by magic, levitating crystals, lighter-than-air gases or something else entirely, a craft that soars through the air is capable of taking you practically anywhere above ground. You might dramatically take it down between narrow canyon walls, make emergency landings in an arid desert, or explore islands floating above the clouds.
- Ground: Either a single vehicle or a convoy of them, ground Carriers are bound to the earth but might be equipped to explore very particular environments: train wheels that restrict your movements to tracks, big thick wheels for splashing through muddy marshland, mechanical drills for exploring hidden caverns, etc.
- Aquatic: Whether floating on the surface or plumbing the deepest depths, an aquatic Carrier is built for the sea. It, naturally, probably doesn't perform to its fullest once it hits the shore.
- Combination: Your Carrier does some or all of the above! It's just flexible like that. What magic or artifice lets it do this? Is it better in some environments than others? Is this functionality part of its design or something it's been altered for?

THE CARRIER & ASTIRS

WEAPONRY

A Carrier typically has weapons built into it: tier V weaponry to be precise, perfect for taking on Carriers, krakens, elder dragons and fascists (the really big ones). Firstly, you should together decide on your Carrier's **approach**. It may use any of the **approaches**, and that might colour how its weaponry works. Then, figure out:

- A tier V weapon: this is likely of *ranged* or *sniper* range (though if you want a *melee* one, I'm definitely not going to stop you). This is probably positioned or mounted in such a way that it'd be inconvenient to use it smaller targets: it's for taking out things as big as you, after all.
 - Take *tags* that add up to a total cost of +2: describe what kind of weapon you have, and why it has those tags.
 - Take *set-up* and *mounted*: describe what restricts your primary weapon from being useful against all targets and in any situation.
- A tier III weapon: again, likely *ranged* or *sniper*. This is a support weapon of some kind, designed for tackling Astirs that come too close and giving covering fire to your allies in battle.
 - Take *tags* that add up to a total cost of +1: describe what kind of secondary weapon you have, and what makes it suited for defending the Carrier closer up.
 - Take *mounted*: describe where on your Carrier these weapons are installed and how they are controlled. Are they manually crewed, guided by magic, or controlled remotely?

QUARTERS

Finally, Quarters are the facilities, features and upgrades that make your Carrier more than just a box you all sit in to move from one place to the next. Your Carrier starts with everything you'd need to perform the various Downtime Scenes: whatever you decide those things look like.

Additionally, anyone playing a Support playbook gets to add new Quarters to the Carrier. It might be a room or feature that you added to the Carrier anew, a part of your life before the Cause that has been put here to help you do what you do best, or something that has always been part of it and just happens to suit your needs.

Each person playing a Support character should describe what their Quarters are and where they can be found on the ship, as well as what it fictionally provides to them and the crew. Finally, choose two benefits it offers them;

- Take an extra **token** when you enter Downtime.
- You may spend 5 Spotlight rather than 6 to earn an advancement.
- Increase the Carrier's CREW by 1. In the future, when you work on a long-term project to increase it, reduce the size of the Clock by 1 (to a minimum of 4).
- Add +1 to a Trait of your choice (max +3).

THE CREW

This isn't a required mechanical step, but it's in many ways as important as the others. Together, you should think of some people that crew the Carrier! This thing doesn't steer itself (it could, I guess, if your players are particularly unsociable), and it's much more colourful to have a support staff of artificers, soldiers, doctors and so on around to make the Carrier a busier place.

If someone is playing as a Captain, this is extra important. If you don't have a crew, whose Captain are you? It'd be a good idea to have a few names on deck for when you make your moves and need to tell people what to do.

THE CARRIER & ASTIRS

DIRECTING THE CARRIER

During play, it's likely you'll want the Carrier and its crew to do things. This is, arguably, what they're for. If nobody is playing the Captain playbook, your Carrier and its crew are effectively Director **actors**. They're on your side, but you're not in charge—you're part of a larger effort represented by the Cause, and if you want the Carrier to be used in a certain way you might need to do some convincing. You can expect things like fire support and transport during Sorties, obviously—after all, you're the best Astir team they have—but convincing them to break orders from above or take more drastic courses of action might be difficult.

If you're playing the Captain, forget all of the above. You're in charge! Fly it into the ground if you want to. Okay, maybe don't do that: that's probably not the kind of damage easily repaired even with magic. But as the Captain, you have authority over the Carrier's crew and can give them orders which they will, broadly speaking, follow to the best of their ability. This is why the Captain has moves like **IN COMMAND** and **INFORMATION NETWORK** that use the Carrier's CREW Trait, as well as an extra box for *dangers*: you're not just responsible for your character, you're also playing the Carrier. Just like a Channeler playbook might take a *risk* or be put in *peril* to represent damage to their Astir, the Captain is responsible for anything that happens to the Carrier.

ASTIRS

Astirs are, in simple terms, magical mechs. They are piloted (and powered) by a Channeler (someone with magical ability that is trained to control one), and given their magical nature are not bound in their designs to how we might think of mechs in a typical setting. Materials are much more flexible—sturdy materials can be enchanted to be lightweight, and vice versa—so don't feel tied to heavy metals and so on.

Depending on your setting and who built them, an Astir's design might include wood, stone, ceramics, glass, or even organic matter like bone, natural fabrics or still-living plants. Your Astir with armour made of glass and structure made of monster bones can match one made of twice-forged steel blow if you want it to, because *magic*.

The same goes for its design. Things don't need to look mechanical, or even make logical sense outside of what limits you establish at the table for your game. Your Astir could be a typical humanoid design, or it could be giant cursed monolith with arms that glides everywhere, humming. If everyone's cool with that, Astirs could be closer to planes or other vehicles than mechs if that's what you're interested in.

Talk between yourselves about what is appropriate for your setting, and how far from the norm you want to get with designs. Go with whatever feels right for what you want an Astir's look to say about it and its pilot, but be prepared to have a discussion with the other players in your game about what, broadly speaking, Astirs in your setting look like, as well as where they come from. Are they constructed, or grown, or summoned from elsewhere? Do different factions and groups have their own aesthetics and designs, or even methods they use to get them?

You might also want to discuss control mechanisms. Does your magic allow you to control an Astir with 1:1 body movements, your mech being a true extension of self, or do you still need to guide it through more conventional means? Again, is this different depending on where the Astir came from, or what faction developed it?

SETTING EXPECTATIONS

Regardless of the design or model you choose, we assume by default all Astirs are at least capable of the below;

- Free flight when not weighed down by gravity (the natural phenomenon, not the game mechanic)—short, limited flight otherwise.
- Providing a magical source of oxygen, at least for a limited time (some Astirs might be designed to provide something more reliable)
- Facilitating communication between friendly, willing pilots within line of sight (external factors might make this ineffective at long distances, like areas where the ambient magic in the air isn't dense enough)
- Facilitating communication between any pilots when in physical contact.

If the above doesn't work for your game, feel free to change them. It won't break anything!

MECHANICALLY SPEAKING...

When it comes to the actual mechanics of using or creating one, Astirs are made up of the following;

- A core, which determines the **approach** of your Astir.
- Two parts, which offer a variety of bonuses and abilities.
- Weapons, which are used to destroy fascists, imperialists, god, etc.
- A move, which is inherent and unique to that model of Astir.

All Astirs also have a pool of Power. This begins at 4, and is spent on choosing Parts and Weapons. The remainder becomes the amount you have to spend on the **SUBSYSTEMS** move in play, and you return to this amount every time you start a Sortie.

CREATING AN ARDENT

To create an Ardent, choose an **approach** and two Parts or Weapons from the Astir creation rules that do not cost **Power**, or make up your own. Ardents and their weapons are tier II.

CREATING AN ASTIR

When creating a custom Astir, there are a few simple steps to follow. First, you pick your Astir's core, determining its **approach**. Then, you'll spend some of your Power (**starting with 4**) on Parts and Weapons, before creating a unique move that defines your Astir. As above, your leftover Power then becomes the pool available to you for the **SUBSYSTEMS** move, so you don't need to spend all of it—in fact, it's a good idea to leave yourself some left over!

1) CORES

An Astir's core determines what its **approach** to combat is. Consider this a broad summary of the kinds of spells and rituals used by your Astir to protect itself and attack your foes. You may freely swap which of your Core's **approaches** is currently in use during Downtime.

Alchemical

An alchemical core, that uses magical substances and mechanisms to amplify the power of a Channeler and allow them to move an Astir.

- Mundane or **Arcane**

Crystalline

A simple core that uses a large magic-rich crystal or gemstone as a focus for a Channeler's own magic.

- **Arcane** or **Profane**

Natural

A gift of the wilds: a living core, of bark, briar or bramble, imbued with all the life and grace of nature. Installed into a war machine.

- **Divine** or **Elemental**

Ancient

An ancient magical artifact, handed down by the gods to mankind long ago. While once a hero might have borne this into battle, it now fuels an Astir.

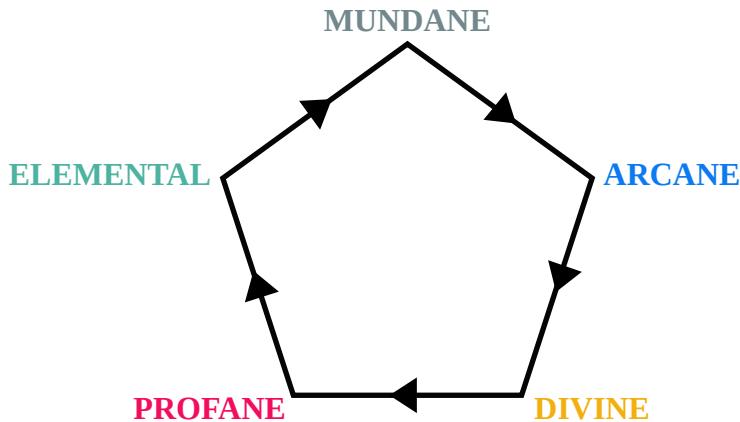

- Mundane or **Divine**

Occult

A core made from false life and stolen power. Blood, sacrifice, demons, you know.

- **Profane** or **Elemental**

THE CARRIER & ASTIRS

As a reminder, you act with **confidence** when facing an **approach** yours is strong against, and **desperation** when facing an **approach** that is strong against yours. Don't worry too much that you're giving your Astir a huge weak spot here: all your foes will have one too, and there are ways of permanently or temporarily changing your Astir's **approach**.

You might work on a long-term project to change it, or frame a **SOMEWHERE NEARBY** Downtime Scene to find temporary protection or weaponry of a different kind.

An Astir's **approach** also typically leads the fiction of how they fight and protect themselves. For example:

- A **mundane** Astir might rely on thick armour or speed for protection. At range, it might use weapons that magically propel physical projectiles like metal bolts or pellets. Up close, its melee weapons likely rely on sharp blades or weighted heads to pierce the protections of other Astirs.
- An **arcane** Astir might rely on charms and rituals that cast magical shields or provide limited bursts of invincibility for protection. At range, it might cast destructive bolts of eldritch energy or barrage foes with magical force. Up close, its melee weapons might be enchanted to cut clean through armour or wrapped in arcane energy that lets it pass through shields or barriers.
- A **divine** Astir might rely on blessings or small miracles for protection. At range, it might sear away foes with divine light or undo them with the power of the gods. Up close, its melee weapons might channel the power of a deity through symbols and blessings to smite the Channeller's enemies.
- A **profane** Astir might rely on cloaking itself in shadow or impeding foes with hexes and curses for protection. At range, it might shower other Astirs in acid or poison, or use ignoble magic that harms an Astirs pilot directly. Up close, its melee weapons might use dangerous or forbidden materials for cruel results, or project blades of psychic or shadowy energy that passes through armour easily.
- An **elemental** Astir might rely on bolts of lightning that strike down projectiles or weapon-melting mantles of flame for protection. At range, it might use artifacts that bring about localised storms or flash-freeze enemy Astirs. Up close, its melee weapons could carve apart armour with super-heated blades or discharge a powerful shock on impact.

When adding weapons to your Astir, you should feel free to tweak their names and fiction to better fit the **approach** it uses.

THE CARRIER & ASTIRS

2) PARTS

The charms, rituals and other magical enhancements built into an Astir are what make it truly special. While most of these are free, some are particularly demanding of an Astir's core. Choosing these requires you to spend **Power**, but remember: the more you spend on Astir parts, the less you have during play for **SUBSYSTEMS**.

Some parts are marked as **[Passive]**, indicating their benefit is effective all the time. **[Active]** parts have an effect that can be used once per Sortie (unless specified otherwise) and is then expended. **[Active]** parts may be re-used once expended with the **SUBSYSTEMS** move.

Extra Arms [Passive] (-1 Power) <i>While adding extra arms to an Astir is child's play, properly coordinating them is much more complex.</i>	Two extra arms & hands
Weapon Conduit [Passive] <i>A magical conduit that compensates for the heavy magical load of certain weaponry, trading utility for output.</i>	+2 Power towards weapons only
Divination Codex [Active] <i>A cross-referenced record of countless common omens, signs and prophecies, easily perused by an attuned Channeler in a flash.</i>	Ask 1 question from the READ THE ROOM list
Arcane Forge [Passive] <i>A magically-powered forge, capable of casting common Astir supplies and munitions from magical energy and a local stock of raw materials.</i>	You may COOL OFF to resupply an expended weapon
Flourish Component [Passive] (-1 Power) <i>Like traditional spellcasting relies on strange gestures, chanting and complex foci to provide power, an Astir's design can be complicated in similar ways to achieve much the same.</i>	Regain 1 Power when you roll doubles (1/p roll)
Spell Routines [Passive] (-1 Power) <i>The battlefield is a busy place, full of countless distractions. It can be helpful to let the magic take over sometimes.</i>	Choose to take a result of 7-9 on a move of your choice (before the roll)
Familiar Matrix [Passive] (-2 Power) <i>Matrices store and coordinate Familiars, making it possible for one Channeler to guide many at a time.</i>	Holds and comes with one set of Familiars of your choice
Chromatic Focus [Active] <i>A device capable of twisting and re-aspecting magic. For Channelers that don't like to ever be at a disadvantage.</i>	Swap to any other approach for a single Scene
Alchemical Suite [Passive] (-2 Power) <i>A selection of alchemical equipment, capable of storing and mixing useful potions before venting them into the cockpit as a vapour to save time.</i> Potions: <ul style="list-style-type: none">• Red: Remove a peril related to physical injury or wounds. Metallic.• Blue: Take advantage when you next WEAVE MAGIC. Fruity.• Yellow: Take a risk. Act with confidence when you next EXCHANGE BLOWS or STRIKE DECISIVELY. Tangy and sharp.	Take 1 of each Potion when someone LEADS A SORTIE
Input Channel [Passive] <i>Conduit channels running directly from a component to the Channeler allow them to assert more direct magical control over it in times of need.</i>	Make a chosen MOVE with +CHANNEL

THE CARRIER & ASTIRS

Chameleon Cloak [Active]

They can't hit what they can't see.

Become invisible for a Scene. The next risk you take is 'revealed'.

Standardised Parts [Passive]

This Astir uses a large amount of common, easy-to-find parts shared with similar models. This makes it easy to repair, lightening the load on everyone else.

Gain +1 token during Downtime to spend on repairs only

Warding [Active]

Anything that helps an Astir not explode is a worthwhile investment.

+ward

Transmutation Link [Passive]

A frame endowed with the ability to shift between two forms quickly, making for a versatile Astir.

+aerial OR +aquatic

Resistance Charms [Passive]

While it is difficult to offer a broad blanket of protection against damage and difficulty, more specific avenues of harm are relatively simple to protect an Astir against.

Examples:

- Replication Rituals (Lowers dangers from limb loss)
Crawl. Climb. Rip. Tear. Many hands make light work.
- Failsafe Channels (Lowers dangers from comms disruption)
Hear you loud and clear, 9th. Everyone else went quiet.
- Lightningrod Spines (Lowers dangers from electricity)
Don't be the fool caught out in a storm. Plan ahead.

Lowers dangers from one source.
Peril > Risk
Risk > Nothing

Artifact [Active]

High-quality artifice provides an edge when it is needed most.

Example:

- Familiar Sync Rituals

Co-ordination rituals allow a Channeler to better direct their familiars, cutting down on the 'attunement drift' common in most matrices.

Grants advantage towards tasks the Artifact is designed for (before or after the roll)

- Dragonscales

For decades before Astirs became a possibility, craftsmen put bartered dragon scales to work as a protective material, never understanding why it seemed less durable wrapped around a man than it did around a dragon. Those profitable wyrms never let slip quite how much magic ran in their blood.

- Afterburners

An injection of volatile alchemical substances paired with a burst of magic can provide a substantial, if short lived, increase in speed. Not for those on a shoestring alchemicals budget.

Heat Condensers [Active]

Stopping to vent heat during a fight can make you a sitting duck—it makes sense then, that many Channelers who could care less about managing it carefully opt to invest in heat condensers.

Untick 'overheating' from your Astir

Complex Spellwork [Passive] (-1/2/3/4 Power)

Sometimes, the key magical functions of an Astir require sacrifice, their complex enchantments or rituals taking up power and space.

Your Director might ask you to take Complex Spellwork to offset a particularly powerful or rule-bending Astir Move.

THE CARRIER & ASTIRS

3) WEAPONS & ARMS

Astirs can use as many weapons as they can carry. Unless you took extra arms from the previous step, an Astir is assumed to be able to carry and use two weapons, or one with the 2H (two-handed) tag. When you add weapons to your Astir past this initial capacity, you should decide whether they are mounted to your Astir for hands-free use (add *+mounted* and *+drain*) or carried in a holster or sheathe (which costs nothing, but naturally the weapons aren't usable whilst stored).

There are both ranged and melee weapons available for Astirs: some of these have the *drain* tag, which causes a weapon to cost **Power**. For convenience, these have been separated out into their own lists. There are also familiars, which can only be chosen if your Astir has a Familiar Matrix (chosen from Astir parts). If you're making a tier IV Astir instead of a tier III one, just replace the tier number and rename the weapon if you want.

The weapon names and descriptions below are merely suggestions. You should feel free to re-imagine them to suit you and your Astir however you please: in fact, many of the example Astirs presented below use renamed or tweaked versions of the weapons from these tables!

— Basic Weapons —

Astir Fists III (melee / intimate, blitz)

Every Astir can fall back on its fists, but they don't make for graceful brawlers.

Might also be: **Concealed Blades, Close-Range Vulcans, Mining Drill**

Sword/Mace/Axe & Shield III (melee / defensive, 2H)

An Astir-sized melee weapon paired with a shield makes for a reliable combination. Bones and forelimbs of monstrous creatures are often used as sturdy, cheap parts.

Might also be: **Flame Jets, Shielded Gauntlets, Energy Field**

Forceknife III (melee / bane, intimate)

Short (for an Astir) blades jacketed in a layer of magical energy, forceblades are good for when you find yourself up close and personal.

Might also be: **Throwing Glaive, Charged Hatchet, Enchanted Daggers**

Greatarm III (melee / area, 2H)

Often almost as tall as the Astirs wielding them, 'greatarms' are the Astir equivalent of greatswords, battleaxes, and any other kind of large, simple, 2-handed weapon.

Might also be: **Godbuster, Laser Flail, Industrial Saw**

Force Repeater III (ranged / defensive, weak)

A simple mechanism that rapidly fires short blasts of magical energy, serving as an effective reserve weapon.

Might also be: **Powerpistol, Mining Laser, Point-Defense Turret**

Autoballista III (ranged / area, blitz, bulky, 2H)

One of the few non-magical weapons in active use among Channelers. Autoballistae are popular for their fire rate, which allows for fending off groups with a spray of bolts as well as overwhelming a single Astir with a flurry of shots.

Might also be: **Heavy Bowgun, Assault Cannon, Flechette Launcher**

Rayrifle III (ranged / infinite, 2H)

Rayrifles are the workhorse of most armies when it comes to arming Astirs. A highly efficient charging cycle means every cast uses an almost meaningless amount of magical energy.

Might also be: **Machine Gun, Arc Staff, Recycler Rifle**

Magic-Missile Array III (sniper / guided, weak)

Often mounted on an Astir's shoulder to leave their hands free, magic-missile arrays fire a dizzying cluster of magical darts that can be guided by an Astir rather than its Channeler.

Might also be: **Chaser Missiles, Lock-On Beam, Automortar**

Titan Bow III (sniper / ruin, reload, 2H)

Immense, heavily-reinforced longbows, taller than even some Astirs. While some baulk at taking a bulky single-shot weapon into the field, others point to the ability to sink an arrow through Carrier hulls as a valuable upside.

Might also be: **Single-Cast Rifle, Beam Sniper, Abyss Gun**

THE CARRIER & ASTIRS

— Drain Weapons (-1 Power) —

Ardentpiercer III (melee / impact, decisive, set-up, drain)

Immense lances designed to punch through armour plating, ardentpiercers are heavy enough that they must be held in place and used as a charging weapon—just swinging one around is unlikely to deliver results.

Might also be: Ceremonial Pike, Heavy Estoc, Pile Bunker

Forceblade III (melee / bane, drain)

Your typical, garden-variety sword made out of projected magical force. It cuts well and won't explode - what else do you want?

Might also be: Beam Saber, Thermal Cutter, Pneumatic Hammer

Basilisk Lance III (ranged / bane, restraining, drain, 2H)

An uncommon weapon, basilisk lances house a lens composed of dozens of magically preserved basilisk eyes. When a certain energy is passed through this lens, a petrifying beam is produced.

Might also be: Chemical Jet, Beam Rifle, Plasma Repeater

Blazewands III (ranged / versatile, reload, drain)

Arranged in paired racks and crafted using subdued motes of elemental fire, short-range wands are a common and potent weapon when it comes to arming Astirs.

Might also be: Grenade Launchers, Acid Pods, Plasma Mortar

Burstcaster III (ranged / area, bane, 2H)

Burstcasters launch a projectile that discharge a spell on impact —typically some kind of dramatic fireball. The wand projectile only arms past a certain distance, to prevent a Channeler from being caught in their own fireball.

Might also be: Rocket Launcher, Fireball Cannon, Reactor Rifle

Novawhip III (melee / area, vorpal, dangerous, drain)

Concentrated motes of fire slumber at equal lengths along this whip, and violently detonate on impact. A devastating weapon in skilled hands that know how to recharge the motes mid-battle.

Might also be: Chain Mines, Plasma Cable, Storm Gauntlet

— Drain 2 Weapons (-2 Power) —

Ruinblade III (melee / ruin, decisive, fragile, drain 2)

Long, slender, and fragile—ruinblades are long swords edged with arcane-charged crystal, allowing them to cut through even Carrier hulls. Just try not to break it.

Might also be: Decay Lance, Null-space Projector, Hi-Beam Saber

Overcharged Bolts III (sniper / ruin, drain 2)

If if need of something punchier, you can take very standard Astir equipment—a simple lightning bolt spell, for example—and simply feed it far, far more magical energy than expected.

Might also be: Gatling Gun, Gauss Rifle, Beam Rifle

Spellcannon III (ranged / versatile, blitz, drain 2, 2H)

A heavy, devastating weapon. Though it demands magic such that few Channelers can muster more than a handful of shots, the results are easily worth the expense.

Might also be: Assault Cannon, Heavy Beam Rifle, Anti-Materiel Rifle

Chaos Revolver III (ranged / ruin, drain 2, messy, profane)

A thick, metal wand with a pistol-style grip. The rotating chambers are filled with overcharged and desecrated crystals, the magical output of which is immense (and volatile).

Might also be: Fusion Pistol, Acid Thrower, Planar Displacer

Storm Axe III (melee / vorpal, drain 2)

A handheld hatchet, insulated to protect its user and engraved with sigils that perpetuate a constant flow of thunderous magic.

Might also be: Plasma Blade, Chainsword, Powered Hammer

THE CARRIER & ASTIRS

— Familiars —

Familiars are small autonomous constructs, typically launched from an Astir, that assist a Channeler in battle. They are small, expendable and easily replaced—any *perils* you take as a result of your Familiars being lost or destroyed are automatically removed during Downtime. You don't need to **MEND SOMETHING** to regain or repair lost Familiars: this is part of the upside of them requiring a Familiar Matrix, at that hefty 2 Power cost.

Additionally, when you **EXCHANGE BLOWS** or **STRIKE DECISIVELY** with Familiars, you roll with +CHANNEL instead. All Familiars are *ranged* or *sniper* to reflect either ranged attacks or the fact they can move independently of you.

Wisp Familiar III (*ranged / area, limited*)

Wisps are by far the most common familiar, and for most people are synonymous with the word. Small floating constructs that pack a surprising punch for their size, wisps are limited by the short lifespan on their magic.

Might also be: **Assault Funnel, Fire Spirits, Attack Drones**

Mote Familiar III (*sniper / impact, bane, dangerous*)

Motes are primed with conflagration magic, and detonate in a fiery blaze when impacted against a target. Channelers tend to use them only when needed, since if shot the explosions tend to set off other nearby motes.

Might also be: **Remote Bombs, Volatile Elements, Lev-Grenades**

Needle Familiar III (*ranged / restraining, weak*)

Needle Familiars pin their targets in place with thin, iron spikes. While lacking when it comes to decisive blows, they excel at restraining and harassing foes.

Might also be: **Glue Turret, Labour Drones, Medusa Heads**

Claw Familiar III (*ranged / defensive, distinct*)

Sharp-clawed contraptions of magic and stone, in the familiar shape of a crow.

Might also be: **Trained Wolves, Raven Ghosts, Saw Drones**

4) ASTIR MOVE

Finally, every Astir has a move attached to it, which is unique to that model of Astir's design and doesn't cost any Power. For this, you may choose from your playbook's Additional Moves or from the [Cantrips](#) list: explain how this move is inherent to the design of your Astir, and what artifact, ritual, spell or otherwise it relies on. Additionally, if you so desire, you might take your Astir move from one of the example Astirs (all of which have custom moves) or work with your Director to create a new one that suits whatever specific concept you had for it's abilities.

It would probably be easier to acquire a new Astir than modify or rebuild one to have a different Astir move, but nobody is stopping you from trying. It would likely be separate projects to create whatever embodies the new move and to fit it into your Astir in place of the old one.

THE CARRIER & ASTIRS

ASTIR EXTRAS

Sometimes, you know a Sortie is going to involve certain kinds of danger or problems. To combat them, you can add an Extra to your Astir: a temporary Part or Weapon that is useful for one Sortie. Extras might be things like heavy armour (Warding), special lenses for seeing in the dark (Resistance Charm), or a mantle mounted with a weapon (Weapon Conduit).

To acquire an Extra, you might have a Downtime Scene **SOMEWHERE NEARBY** or build one yourself in the **HANGAR**. Extras only ever last for the Sortie they are made or bought for. Extra weapons are expended or blown up, equipment is tossed aside to make your Astir lighter, armour is dramatically destroyed to reveal your Astir spotless beneath it, etc.

Extra parts don't need to necessarily be those from the example list! Feel free to work with your players to build unique extras to meet the situations and circumstances of your campaign and the Sorties they go on.

If you find players making the same Extras multiple times, you might consider offering them some way of acquiring that extra more efficiently or without cost at all in the future. They might be able to invest **tokens** in a production facility on the Carrier, might come up with a more streamlined method through repeated builds, and so on.

DIRECTOR'S NOTES

SALVAGING ASTIRS

If you capture intact enemy Astirs in the field, you might want to re-purpose or salvage them for your own needs. Refitting an Astir to be used regularly by one of your Channelers would be a long-term project, with a length chosen based on how damaged it was, how familiar its controls are, etc. Salvaging an Astir for parts or passing it on to another part of the Cause might net you an additional **token** to spend during Downtime to repair, work on a project or acquire things.

THE ASTIR CARD

You'll record your choices and the stats of your Astir on small sheets like these, which have space to record all of its component Parts as well as its Power capacity (used to make the **SUBSYSTEMS** move) and a tickbox for overheating. As a Channeled, certain moves might ask you to tick or mark 'overheating'—that's this box. If you're asked to tick this box but it's already ticked, the building heat destroys one of your Parts, putting you in *peril*.

HEAT CONDENSERS		FAMILIAR MATRIX				
Untick 'overheating' from your Astir		Wisp Familiars III				
<i>The Aries is an imposing design, with devilish horns and familiars that have a habit of congregating in aura-like formations. The scariest thing about it, of course, is its speed. Propelled on wheels of magical flame that scorch the ground beneath it, the Aries is not an easy thing to run from.</i>			MV: MANAWHEELS			
			While overheating, take advantage when making a move that relies on your speed.			
CARRIED	Blazewands III (ranged / versatile, reload, drain)					
CARRIED	Forceknife III (melee / bane, intimate)					
MATRIX	Mote Familiar III (sniper / impact, bane, dangerous)					

JESTER III	ARCANE	CORE	POWER	0		
		CRYSTALLINE	OVERHEATING	■		
RESISTANCE CHARMS		COMPLEX SPELLWORK				
PRESSURE REGULATOR (Lowers dangers from acceleration)		Component for Jester Lev-Spells				
<i>Embedded with spell-stones that reduce its weight, the Jester excels at staying mobile. Capable of hovering short distances and moving with agility unheard of for most Astirs, most long-time Jester Channelers develop an almost supernatural sense of battlefield positioning.</i>			MV: LEV-SPELLS			
			You may use the MOBILITY Move from the Scout Playbook while piloting this Astir.			
CARRIED	Dire Shotel III (melee / ruin, 2H, drain)					
HOLSTERED	Basilisk Lance III (ranged / bane, restraining, drain, 2H)					

THE CARRIER & ASTIRS

TIER IV

PURSUER _{IV}	PROFANE	CORE	POWER	3	
		OCCULT	OVERHEATING	■	
WARDING		ARTIFACT			
SHADOWVEIL (+ward)		HASTE RITUALS			
<i>The Pursuer is hunter, designed to track and destroy specific enemy Astirs. Though its pursuit-bond requires line-of-sight for an initial lock, the tracking it provides is accurate, long-lasting, and incredibly difficult to shake. When it comes time to end the hunt, sharp claws are often more than good enough to finish off a Pursuer's prey.</i>		MV: PURSUIT-BOND	<i>You may designate another Astir you can see as your target. You are supernaturally aware of its location at all times</i>		
CARRIED		Scything Claws IV (melee / intimate, blitz)			
+MOUNTED		Ritual-Rifle IV (sniper / mounted, drain)			

BIRDCAGE _{IV}	DIVINE	CORE	POWER	2	
		ANCIENT	OVERHEATING	■	
ARTIFACT		FAMILIAR MATRIX			
ANGEL COLLARS		Bound Angels IV			
<i>There are many that would say the concept of Astirs is a dangerous one. Evil, even. There are few that make such a judgement so easy as the Birdcage, a hefty, walker-style Astir with little in the way of its own armaments. It makes up for this with a flock of bound and collared angels, who are cowed into service by threat of a true death. They are cruel machines, and their Channelers more so.</i>		MV: BINDING RITUALS	<i>When you use SUBSYSTEMS to activate your ANGEL COLLARS, you may clear a risk related to your Bound Angels.</i>		
CARRIED		Hulking Form IV (melee / bane, intimate)			
MATRIX		Bound Angels IV (ranged / defensive, distinct)			

JACK-OF-BLADES _{IV}	MUNDANE	CORE	POWER	3	
		ANCIENT	OVERHEATING	■	
RESISTANCE CHARM		EXTRA ARMS			
FLASHFORGE (Lowers dangers from melee weapon breakage)		+2 Arms			
<i>Rarely witnessed as anything but a storm of sharp and shattering metal, the Jack-Of-Blades is a strange Astir, designed to wield fragile weaponry that it breaks and re-forges repeatedly during combat. Power-channels in the blades allow for the re-purposing of magic usually lost in the heat venting process, and a paired armament forgoing defence in favour of offense means very little remains standing long in the face of a Jack-Of-Blades.</i>		MV: BRANDED BLADES	<i>Your next EXCHANGE BLOWS or STRIKE DECISIVELY has advantage when you untick 'overheating'.</i>		
CARRIED		Paired Blades IV (melee / defensive, 2H)			
CARRIED		Paired Knives IV (melee / bane, decisive, intimate, 2H)			

THE CARRIER & ASTIRS

MEDUSA _{IV}	PROFANE	CORE	POWER	0
		OCCULT	OVERHEATING □	
FAMILIAR MATRIX	SPELL ROUTINES			
Adder Familiars IV	Choose to take a 7-9 when you STRIKE DECISIVELY			
<i>Protected by magically animated snakes and bearing petrification magic, the Medusa is understandably a feared Astir. Even the most talented of pilots put themselves at risk when coming close to its gaze.</i>				MV: PETRIFIER CORE
CARRIED	Gorgon's Glare IV (ranged / bane, restraining, 2H, drain)			
MATRIX	Adder Familiars IV (ranged / area, limited)			

When you **EXCHANGE BLOWS**, you may take **disadvantage** to have your opponent take the risk (restrained) on a 6-.

THE CONFLICT TURN

The Authority and the Cause are the big players in any game of Armour Astir. The Authority is oppressive, powerful, and domineering, with its sights set on the world: or at least the slice of it our game takes place in. On the other hand, the Cause is (hopefully) benevolent and driven—but is just as likely scattered, conflicted, and scared. While players tend to their wounds and sneak precious moments in Downtime, these forces develop too, during the **Conflict Turn**.

AUTHORITY STRUCTURE

The Authority is a single entity, divided into Divisions and held together by Stability. Mechanically speaking, Divisions are comprised of the following:

- Important **actors** or **assets** that keep them safe from the player characters.
- A **passive** step, a benefit they automatically provide at the start of the Conflict Turn.
- **Pillars** that they control on behalf of the Authority (3 each).
- **Outcomes**, that can be chosen from when they're victorious during a Conflict Scene.

The latter two are determined by the Division's type: see the next page for a selection, though you should feel free to invent new ones. You should choose 3 Divisions, and give each a name as well as a goal or ideal they strive for as they serve the Authority—this ideal might conflict with other Divisions, or even the Authority writ large.

If you want to define your Authority further, with more than 3 Divisions, remember that more Divisions means more Conflict Scenes per turn. If you don't also add more Factions to the Cause, you risk making it very easy for the Divisions to tire out Factions and make it difficult for them to oppose, not to mention the extra complexity this adds to the Conflict Turn.

Additionally, keep in mind that the Authority isn't set in stone: the Divisions you start with might be replaced or fall apart, so don't feel like what you start with is necessarily the only set of Divisions you'll get to play with.

DIVISION STRENGTH & ROLLS

Divisions are not equal: every Authority has one Division that is stronger and more important to it than the other two—a Major Division and two Minor Divisions. This primarily affects the rolls players make during Conflict Scenes. Against the Major Division, players must roll a 5+ in order for the Cause to succeed. Against the Minor Divisions, they only need to roll a 3+. We refer to this as the Division's Strength.

DESTROYED DIVISIONS

If a Division is destroyed or removed from favour during the Conflict Turn, it is replaced at the end of the next one with a Division of a different type. Until the new Division is created, any Pillars the old one controlled are temporarily considered to have 0 GRIP, meaning they can be felled with a Faction Outcome or with a Sortie via plan & prepare. The new Division inherits any Pillars the old one controlled if they're still standing.

Additionally, if it was previously the Major Division, it becomes a Minor and one of the others is promoted to Major instead, as the remaining groups within the Authority take or steal the lost Division's resources and favour. Once you've shifted that position, you should show a quick vignette of what this new Division's formation looks like.

STABILITY

Even the most cruel, squabbling petty empire has some kind of internal equilibrium or momentum that stops it falling apart: **Stability** represents that. The Authority starts with 9 **Stability**, and loses it as the players choose to reduce it with **PLAN & PREPARE**.

At 6 **Stability** or below, players start with 3d6 for **PLAN & PREPARE** instead of 2d6.

At 3 **Stability** or below, one Faction un-taps itself at the start of the Conflict Turn.

At 0 **Stability**, the Authority can no longer hold itself together. It's time to scatter it for good.

THE CONFLICT TURN

TYPE	FOCUS	EVERY TURN:
Military	Deploying forces to attack or defend with violence.	<p>Hold 3 to spend during the next Sortie 1-for-1 to;</p> <ul style="list-style-type: none"> • Introduce a new threat • Force someone to act in desperation <p>When a Military Division wins a Conflict Scene, choose one:</p> <ul style="list-style-type: none"> • A Faction with 3 GRIP is seized. • The Authority gains 1 GRIP on a Faction or Pillar. • A vulnerable or exposed asset or actor is fortified or hidden.
Subterfuge	Deploying spies or agents to deal with things covertly.	<p>Place 1 GRIP on a Faction or Pillar of their choice.</p> <p>When a Subterfuge Division wins a Conflict Scene, choose one:</p> <ul style="list-style-type: none"> • A Faction with 3 GRIP is seized. • The Authority learns a secret about the Cause or a Faction. • The Director may force a re-roll during a Conflict Scene this turn.
Resource	Accruing wealth, information and personnel.	<p>Advance any Division Scheme of their choice by 1 step.</p> <p>When a Resource Division wins a Conflict Scene, choose one:</p> <ul style="list-style-type: none"> • The Authority starts a new Scheme, or advances an existing one. • The next Sortie faces a complication: LEAD A SORTIE with disadvantage. • The Director takes 2 extra tokens during the next Downtime.
Research	Developing new enchantments and rituals.	<p>The Director may force a re-roll during a Conflict Scene this turn.</p> <p>When a Research Division wins a Conflict Scene, choose one:</p> <ul style="list-style-type: none"> • The Authority learns a secret about the Cause or a Faction. • The Authority starts a new Scheme, or advances an existing one. • The Director takes 2 extra tokens during the next Downtime.
Curator	Stealing and investigating that which doesn't belong to it.	<p>Start or advance a 4-step clock titled 'Take something that isn't theirs.'</p> <p>When a Curator Division wins a Conflict Scene, choose one:</p> <ul style="list-style-type: none"> • The Authority starts or advances a 4-step clock titled 'Take something that isn't theirs.' • The Authority starts a new Scheme, or advances an existing one. • A vulnerable or exposed asset or actor is fortified or hidden.
Executive	Protecting and deepening systems of control.	<p>Remove 1 dice from the pool when players PLAN & PREPARE.</p> <p>When an Executive Division wins a Conflict Scene, choose one:</p> <ul style="list-style-type: none"> • The next Sortie faces a complication: LEAD A SORTIE with disadvantage. • The Authority starts a new Scheme, or advances an existing one. • The Director may force a re-roll during a Conflict Scene this turn.

What happens when a Faction is seized? As usual, the narrative specifics are up to you. Mechanically speaking, the Faction is removed from the Cause. Anything beyond that, such as the fate of specific characters and the circumstances of the seizing are for you to decide.

Similarly, when a **Pillar** is felled, we assume that the Cause are taking control of whatever makes that thing important. This means that, fictionally speaking, a Cause doesn't have to hold an entire city or region in its hand to seize it: just whatever little piece made it valuable on the board as a **Pillar**.

DIRECTOR'S NOTES

THE CONFLICT TURN

GRIP

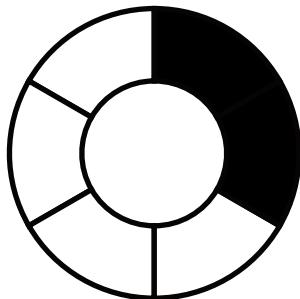

GRIP is a rough measure of the Authority's influence over Faction or Pillar, and represents everything from military occupation or pressure to the meddling of diplomats and spies. When a Faction the Authority doesn't control has 3 GRIP on it, it may seize it through a Conflict Scene: when a Pillar the Authority controls has 0 GRIP on it, the Cause may free it.

All Factions begin with 0 GRIP, and all Pillars begin with 3 GRIP.

DIVISION SCHEMES

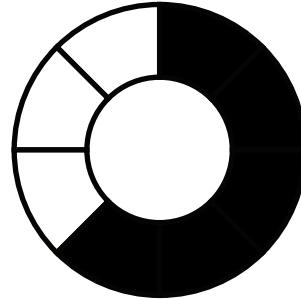

With the Outcomes from Conflict Scenes, Divisions can gradually start and complete long-term projects. These Schemes, if completed, should create a large advantage for the Authority that threatens to completely turn the war in their favour unless it is dealt with as quickly as possible. Alternatively, the Authority might undergo a long term project to regain some of its **Stability** by building a new **Pillar** (literally or otherwise).

Schemes don't need to be one big macguffin that's being slowly constructed. A Scheme might be developing a plan for one decisive military push, slowly accruing reserve forces for an unstoppable offensive, or even the inner political turmoil of the Authority slowly resolving itself into a state where its true might can be properly coordinated.

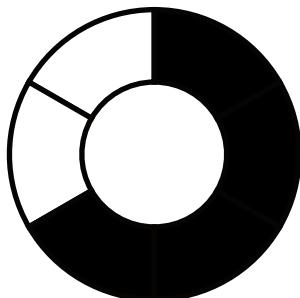

Unsealing the Sovereign Crypt

Crown-Claimant Goze aims to open the Sovereign Crypt and use the contents as fuel for another ritual.

The End Of Mourning

Once the mourning period for the last Empress is over, the remaining heirs are sure to unleash the forces they have massed in a civil war.

Binding the Northspine Mountains Tyrant

The tyrant of the Northspine Mountains, a ferociously devious green dragon, would make an excellent adviser for the Kyrgain forces... if they can be brought in line.

THE CONFLICT TURN

DISFAVOUR

Divisions are not entirely a power unto themselves: they are a part of the Authority, and to an extent are held accountable for upholding its values, however terrible those are. Divisions that cannot toe the line and get results mark themselves apart with **disfavour**. When a Division takes action that disappoints, dishonours or disrespects their masters, increase that Division's **disfavour** by 1. Alternatively, when a Division does something that would make another look incompetent or disloyal, increase that Division's Disfavour by 1.

Similarly, when a Division takes action that impresses or elevates them in the eyes of their masters, reduce that Division's **disfavour** by 1. This should be something of note: more than just succeeding at a move. Trust is easy to lose, and hard to regain.

Mechanically speaking, any Division with 10 or more **disfavour** can be ousted and replaced at the start of the Conflict Turn, if the other two Divisions desire it. No action or roll is needed, but toss a coin: on heads, the ousted Division becomes a *tapped* Wayward Faction instead. Unlike when a Division is destroyed, a replacement Division moves in immediately: 10 disfavour doesn't happen overnight, after all. Moves were already being made.

When playing Scenes during the Conflict Turn or more broadly depicting Authority characters, they should take the **disfavour** of Divisions into account when showing how they think and feel about them. This may also play into Sorties, with Divisions steeped in **disfavour** either not being given valuable opportunities to prove themselves or seizing any then can to try and claw back some worth in the eyes of their masters.

AUTHORITY FORCES

The Authority, broadly speaking, has far more soldiers and assets than ever worth individually keeping track of. Instead, we just keep a record of the movers and shakers—people and things that are key to how their Division operates. Broadly speaking, everything important that the Authority and its Divisions make use of is either an **actor** or an **asset**. An **actor** is someone or a *squad* of someones that can appear on-screen and threaten the players. They take *risks* and *perils* like the players, and might carry *perils* with them out of a Sortie if they retreat during it. An **asset** is an object or place that is useful to the Authority, and might be anything from a stockpile of simple supplies like food or clothing to an entire fortress or base. There's no strict limit or defined amount of these that the Authority has—this is not a simulated game of attrition where the Authority's finances and military numbers need to be kept track of—but **actors** and **assets** are important.

When a Division has lost **actors** or **assets** equal to or over its Strength (5+ for a Major Division, 3+ for a Minor one), that leaves the Division vulnerable. Vulnerable Divisions can be destroyed either during the Conflict Turn or as the result of a Sortie, allowing players to deal real harm to the Authority.

Of course, not every foe or object your players stumble upon is an **actor** or **asset**. If you sneak in the back door of an Authority base and shoot a single guard, that doesn't bring the whole thing meaningfully closer to collapse: save that label for things that feel like they matter.

As the Director, it's important to think about what happens when **actors** and **assets** are defeated or destroyed. Does that elite cadre of Astir pilots fall in line behind a different officer when theirs is killed in battle, or was their loyalty to that officer rather than the Authority overall, causing them to leave it? When they lose a trio of experimental Astirs in battle, is the Captain of the *Second-Hand Fortune* given command over a new unit, or just demoted underneath one of their peers? Don't feel like you need to have a grand plan penned for every **actor** or **asset** in advance, though. Sometimes decisions in the moment are the most fun to make.

THE CONFLICT TURN

CAUSE STRUCTURE

While the Authority is one entity organised into orderly Divisions, the Cause is disparate Factions united under one banner. Factions represent the smaller groups and efforts that make up the Cause. For those, we just keep a list of their leader, a short summary of who they are, and their type, which has an Outcome attached to it—what they'll do when they succeed during the Conflict Turn.

In the Conflict Turn, the primary role Factions play is taking part in Conflict Scenes and, depending on how the dice turn out, making moves of their own. What that opposition looks like, and what Outcome they provide, is determined by their type;

TYPE	OPPOSITION	OUTCOME
Guerrillas	Opposes with ambushes and scattered force	A specific asset or actor is made vulnerable or exposed in some way.
Agents	Opposes with assassination and subterfuge	Disrupt the Authority, removing 1d3 GRIP on a Faction or Pillar .
Bandits	Opposes with robbery and sabotage	Reduce a Scheme clock 1 step, and increase a beneficial clock 1 step.
Despoilers	Opposes with unnecessary and imprecise force	All Scheme clocks are reduced by d6. Players have 1 less token each next Downtime.
Scholars	Opposes with ingenuity and curiosity	Key intel gives the party advantage when they next LEAD A SORTIE .
Suppliers	Opposes with new equipment or supplies	Replace a seized Faction, or untap any other two Factions.
Firebrands	Opposes with propaganda and diplomacy	A Division of your choice increases its disfavour by d6.
Military	Opposes with direct assaults and force	Fell a Pillar with 0 GRIP, or destroy a <i>vulnerable</i> Division (flip a coin: on tails, they become a Wayward Faction).
Strange	Opposes with the weird and unexplained	Something unexpected and strange happens.
Adventurers	Opposes with bold action and unpredictable tactics	Deliver a cut of loot to the Carrier: flip a coin. Heads, it's <i>valuable</i> —tails, it's <i>treasure</i> .

You want 2 Factions per Division: so 6 by default. If you are hacking the game a little and running extra Divisions, add extra Factions to balance it out. If you want, you could also combine multiple Factions into one larger one that can be *tapped* multiple times (see below).

TAPPED Factions

Factions can't offer infinite support. During Conflict Scenes they may become *tapped* as they expend manpower, supplies, or revolutionary zeal. *Tapped* Factions are exactly that: temporarily spent or unavailable. They can still take action that would cause them to be *tapped*, but only at the cost of sacrificing themselves permanently: their remaining members scattered to the winds, their resources lost, etc.

Once a Faction is *un-tapped*, they can oppose Division Scene in the normal manner again. Factions do not normally *un-tap* on their own: the players *un-tap* them through their actions in Sorties using **PLAN & PREPARE** and with certain Downtime Scenes.

The Faction the players belong to acts like any other during the Conflict Turn, and can be *tapped*, *un-tapped* or destroyed as per any other—though in the latter case, the players should consider looking for a different Faction to group up with.

If a Faction is destroyed, a new one can be created to take its place: Supplier Factions can do this with their Outcome, but it might also be the goal of a Sortie, a long-term project, or simply something that unfolds in the background of play over multiple sessions.

THE CONFLICT TURN

EXAMPLE FACTIONS

The Iron Circus (Suppliers)

The Iron Circus build and repair magical constructs, operating out of a steel-clad airship. The Circus aren't an orderly workforce, but they're fast, reliable, and loyal.

TAPPED?

GRIP

Syl's Stallers (Bandits)

The Stallers, led by Syl Sarna, specialise in stopping constructs in their tracks. Using experimental gauntlets that nullify enchantments, they infiltrate reinforcements in transit and prevent their constructs from ever animating.

TAPPED?

GRIP

Allington Merchant's Association (Suppliers)

More commonly known as just the Allington Association, they possess a significant amount of capital and are more than willing to put it on the line to support more revolutionary-inclined clients.

TAPPED?

GRIP

The Riverknights (Guerillas)

A cadre of fighters who use custom-enchanted aquatic Ardents to rapidly navigate rivers and canals, often striking ships or dockside fortifications before retreating as quickly as they arrived.

TAPPED?

GRIP

The Barkwrights (Military)

Though low on resources and stretched thin, the Barkwrights have long since made a name for themselves protecting against deforestation. Their secret to success is an ancient transmutative magic that bonds flesh with living wood, which they use to recover from even terrible injuries.

TAPPED?

GRIP

League Lament (Agents)

An elderly coven of witches who orchestrate assassinations through repeatedly hexxing their targets over a period of time, eventually causing them to die in accidents that, to anyone else, seem incredibly unlucky. The superstitious often blame the League Lament for any misfortune they suffer.

TAPPED?

GRIP

The Door Society (Firebrands)

Locksmiths by day and revolutionaries by night, the Society considers revealing that done behind closed doors their speciality. All locks can be picked, and it's far easier if you're the person that made it.

TAPPED?

GRIP

THE CONFLICT TURN

PILLARS

Pillars are places, people or objects of great importance that allow the Authority to continue their stranglehold on wherever your game is set: each **Pillar** corresponds to 1 point of **Stability**, and is controlled by a Division: decide which Division controls which of your **Pillars** when you start your campaign.

When a **Pillar** falls, that **Stability** is lost: and thus, the Authority is inched closer to collapse. When a **Pillar** falls, the Authority consolidates: it rebuilds its strength around what is left, rather than attempting to regain what has been taken. It cannot regain GRIP on fallen **Pillars**: they're gone. The Authority never sees its collapse until it is inevitable.

In a large campaign spanning a globe, **Pillars** might be entire countries and capital cities or hugely influential diplomats and leaders, while in a smaller campaign your **Pillars** might be cities, towns and magical artefacts. In either case, make sure you don't step into the trap of only considering **Pillars** that are of military importance. Places and things of historical, cultural, spiritual or ecological importance are equally as valid: they, after all, represent the people and the future that the players and Factions are fighting to protect or free from the Authority's clutches.

Pillars aren't just for fighting over, of course. Once liberated from the Authority, **Pillars** will likely still need the attention of the Cause occasionally—you should allow your players to invest themselves in the future of **Pillars** if they want to. Players might help repair the damage from Authority raids or occupation, assist key figures in planning for the future of the region, or help seal away, protect or repair important relics. All of the above might be things done in Downtime, or might be the focus of Sorties and Missions.

Players may have a GRAVITY clock with a **Pillar** if they desire, but **Pillars** themselves do not have any statistics or moves attached to them—even small communities are difficult to codify in a way that is truly representative. The Director might associate Authority actors or assets with a **Pillar**: as occupying forces, as a home base, etc.

Why can't the Authority re-take **Pillars**? This is to prevent a tug-of-war situation where your game lasts forever as **Pillars** are traded back and forth. When players fell a **Pillar**, they're making a conscious choice to push the campaign, and the Authority, closer to an ending.

While the Cause and the players can attempt to take **Pillars** one by one, reducing their GRIP until they are exposed, they might also focus on attacking a Division: taking more effort, but giving them a temporary window in which they might fell multiple **Pillars** in quick succession. Make sure they understand both options are available to them!

DIRECTOR'S NOTES

THE CONFLICT TURN

THE WAYWARD

Sometimes, when a Division is ousted badly or the fiction demands it, groups with power that are unaligned to either the Authority OR the Cause can appear. Sometimes, these third parties may have always been there, waiting on the sidelines until it is time to make their move.

Wayward Factions use the same rules as those of the Cause, in that they have types and Outcomes, and can be *tapped* or *un-tapped* in play. They differ, however, in that Wayward Factions may choose to oppose the Cause instead of the Authority: *tapping* themselves to force a failure during a Conflict Scene, or more broadly *tapping* themselves to support the Authority during a Sortie. Wayward Factions typically become *un-tapped* as the result of Director moves.

What allows Factions to succeed is teamwork and a united front when opposing moves—something the Wayward, naturally, interferes with. What, then, unites the Wayward Factions? What do they want? These are the kind of things you should figure out if you have an interest in spotlighting the Wayward in your game.

DIRECTOR'S NOTES

PLAYING THE CONFLICT TURN

During the Conflict Turn, you will play out Scenes together to depict the Cause's struggle to resist the Authority and its endeavours. During each Scene, you'll pick Challenges—some of which involve rolls—to add detail, then you'll choose a Resolution for the Scene based on how those rolls went. You could play the Conflict Turn with your whole group, or just a few players. You might even play the Conflict Turn of a campaign with a *different* set of players entirely!

When playing out a Conflict Scene, you might temporarily step into the role of characters who are part of the Authority or the Cause, or even appear as your normal character occasionally. You don't need to make up characters ahead of time, but it can be helpful to do so if you're not good at coming up with them on the spot.

Characters you embody in the Conflict Turn don't need a playbook or Traits—just a rough idea of who they are, what they look like, and what they want is good enough. Conflict Turn characters can be captured or die during certain Scenes, so be careful who you throw into them: there's nothing wrong with playing someone who feels a little disposable instead. It's what they're doing that will matter.

There are three steps to the Conflict Turn:

- Choosing which Scene a Division will start
- Playing that Scene by making Challenges and **rolling**
- Resolve the Scene by comparing Cause and Authority successes

STEP 1: CHOOSE CONFLICT SCENE

Three Conflict Scenes are played during each Turn, one tied to each Division of the Authority. Some Conflict Scenes will invite everyone playing to take turns choosing Scenes—in this case, some players won't get to issue one, so give priority to those who ideas they're excited about.

When you choose a Scene, also choose which Faction will be representing the Cause's efforts or interests during it, and *tap* that Faction. If it's already *tapped*, the Faction is destroyed. If you have no Factions that aren't *tapped* or just don't want to *tap* one, you can skip it: still play the Scene out, but the Division automatically wins when you get to the Resolution.

STEP 2: PLAY THE SCENE

Each Scene has its own set-up and instructions for play, detailing who players are and what they are doing. Each also has its own list of Challenges for players, including the Director, to make at each-other: some of these call for you to **roll**. When you do so, roll a single d6. If the Scene is tied to the Authority's Major Division, a 5+ is a success. If it is tied to one of the two Minor Divisions, a 3+ is a success. Keep note of how many successes and failures are scored during the Scene. If the players wish, they may tap a Faction to skip a **roll** and add a success.

Remember, if you're playing a Division character during a Scene and you have to **roll**, a failure is a good outcome for the Division and you! Make sure to play out the Challenge appropriately.

THE CONFLICT TURN

STEP 3: RESOLVE CONFLICT SCENE

Once all of a Scene's Challenges have been played, it's time to resolve it. Compare the successes and failures from rolls: if there are more successes, the Cause comes out of the Scene with a victory or advantage of some kind. If there are more failures, the Division is victorious instead.

In either case, as a group, choose a Resolution for the Scene that you feel lines up to the events of it as well as who came out on top. The winning side then narrates their answer to the Resolution, and chooses an Outcome they earned through it: feel free to flash forward to show the effects of a Scene where you need to.

When playing out Conflict Scenes, try to think of them as brief flashes to the broader events of the war: keep them short and sweet. Conflict Scenes are a great opportunity to briefly show off characters who don't have much opportunity to appear otherwise.

Finally, the events of the Conflict Turn should be communicated to the player characters in-fiction. Naturally, Downtime will provide a great opportunity to slip them this information, through newspaper reports and other media, relevant characters passing along accounts, and so on.

CONFLICT OUTCOMES

After a Conflict Scene is played out, the victorious side may choose an Outcome. If the winner was the Authority, the group may choose an option from those listed on the Division's type. If the winner was the Cause, the group may instead choose one of the Factions that was involved in that Scene—either the initial 'defending' Faction, or any that were tapped to skip rolls—and gain their Outcome.

If you have a specific Outcome in mind, you might frame a Conflict Scene around it specifically: but you don't need to commit to a choice ahead of time.

A Division being destroyed or changed is a big deal. Make sure this is seen and felt appropriately by the players, and unless you're intending it to be a big surprise, try and work that Division's falling fortunes into the fiction beforehand.

DIRECTOR'S NOTES

THE CONFLICT TURN

CONFLICT SCENES

AN UNFURLING PLAN

Everyone plays, taking the role of either members of the Authority (as you hatch a plan of some nefarious nature) or the Cause (as you figure out how to thwart that plan). Decide together where this meeting is taking place, and who else is present. Who are you both playing? What history do you have?

During the conversation, anyone may ask anyone else for details on the situation and circumstances.

Playing The Scene

Players freely roleplay, issuing Challenges to escalate and complicate the Scene. Continue playing until at least three **rolls** have been made or the Scene reaches what feels like a natural end: look at the Resolutions below for what that might look like.

During the scene, anyone may issue a Challenge:

- *I present evidence of a spy in our ranks: roll to see if it's taken seriously.*
- *I point out a blind spot in our intel: will we recommit resources (reduce a beneficial clock by 1 step) or roll and take the risk?*
- *A step of our planning is left undone: who will roll and suggest a solution?*
- *My squad or group is eager to contribute. Who will give us direction?*
- *Explain to me how this represents the Authority/Cause's ideals.*
- *How does your plan better serve the common people?*
- *I'm hesitant to commit my resources: who will roll and try to convince me?*

Resolutions

- *A consensus is reached: who benefits the most?*
- *We leave without reaching an agreement: who acts alone?*
- *The meeting falls to argument and conflict: who feels most slighted?*

A COVERT OP

Everyone plays. The Director assumes the role of various Authority or Cause characters, while other players act as agents for the opposite. Discuss what kind of undercover operation you are leading, and what happens should you fail.

Who are you? What part of the Division or what Factions are you tied to? Why were you chosen for this? What do you think about the mission?

Playing The Scene

Players freely roleplay, issuing Challenges to escalate and complicate the Scene. Continue playing until at least three **rolls** have been made or the Scene reaches what feels like a natural end: look at the Resolutions below for what that might look like.

During the scene, anyone may issue a Challenge:

- *A magical trap bars the way. Do you take a slow route around, or roll to disarm it?*
- *Tight guard patrols threaten to catch you. Roll to see if you can evade them.*
- *You must quickly and quietly take out a watchman: who will roll to do the job?*
- *Your intel turns out to be inaccurate: what's wrong, and how do you improvise?*
- *You find a position that overlooks something secret: describe it.*
- *Someone will have to split off as a decoy. Who goes? Roll to see how successful they are.*
- *Our plans are changed suddenly: roll to see if it's for better or worse.*

Resolutions

- *The agents are discovered and exposed: can they still escape?*
- *The agents escape without being caught: how do they celebrate?*
- *The agents sacrifice themselves to accomplish their duty: is it worth it?*

THE CONFLICT TURN

ALL OUT WAR

Everyone plays. Players distribute themselves between the Authority and the Cause evenly if possible, casting themselves as soldiers, Channelers and other members of the Division or a Faction. The Director may freely play characters from both sides where needed to facilitate the scene. Decide together where your battlefield is, what the stakes of this fight are and how these characters feel about the war and their place in it.

Freely roleplay the clashing forces, Astir against Astir, Carrier vs Carrier, and so on. During the struggle, anyone may ask anyone else for details on the situation and circumstances.

Playing The Scene

Players freely roleplay, issuing Challenges to escalate and complicate the Scene. Continue playing until at least three **rolls** have been made or the Scene reaches what feels like a natural end: look at the Resolutions below for what that might look like.

During the scene, anyone may issue a Challenge:

- *I come straight for you, weapons ready: roll to see if you can hold me back.*
- *I lead an unexpected ambush, and roll to see if I catch you by surprise.*
- *I separate you from your supporting forces: roll to see if you can regroup.*
- *You are ordered to pull back. Do you follow orders?*
- *I seem to drop my guard: if you seize the opportunity, roll to find out if it's a feint or not.*
- *Our battle endangers a group of civilians. If you refuse to hold back, roll.*
- *You could complete a key objective at cost. What would you lose? If you give it up, don't roll: just add a success.*

Resolutions

- *One side is forced to rout: are they cut down as they flee?*
- *A truce is reached: what are its terms?*
- *The battle will continue tomorrow, but an impressive push wins it for today: what is secured?*

A CHASE

Two volunteers play, one hunter and one hunted. They should decide between them which takes the role of an Authority member and which represents the Cause, on what level the chase is occurring—on foot, in Astirs, etc—and why it is happening. Decide where the chase takes place, and who is at risk should things get messy.

Freely roleplay the chase. During it, anyone may ask anyone else for details on the situation and circumstances. Other players may embody bystanders, the environment, and so on where required.

Playing The Scene

Take turns making Challenges, starting with the hunter. Continue playing until at least three **rolls** have been made or the Scene reaches what feels like a natural end: look at the Resolutions below for what that might look like.

During the scene, anyone may issue a Challenge:

- *I lead you into a trap. Roll to see if you can escape it.*
- *We briefly draw close, and I injure you: how do you push me away?*
- *We dash through a dangerous area. Will you take your time, or will you roll to give chase?*
- *I deploy something magical to my advantage. What happens?*
- *I find a sudden burst of speed in me: roll to see if you can match me.*
- *I slip through a busy, crowded place. Do you rush through and cause a scene, or roll to find another path?*
- *You turn a corner and lose sight of me. How do you find me?*

Resolutions

- *We walk into a dead end. Can the hunted still escape?*
- *An escape is in sight: can the hunter catch up in time?*
- *A third party intervenes: whose side are they on?*

THE CONFLICT TURN

ONE-ON-ONE

Two volunteers play, locked in conflict with one another. They should decide between them which takes the role of an Authority member and which represents the Cause, what form their duel takes, and what its stakes are.

Decide where the duel takes place, and who is at risk should things get messy.

Freely roleplay the duel. During it, anyone may ask anyone else for details on the situation and circumstances. Other players may embody bystanders, the environment, and so on where required.

Playing The Scene

Take turns making Challenges, starting with whoever has the most to lose. Continue playing until at least three **rolls** have been made or the Scene reaches what feels like a natural end: look at the Resolutions below for what that might look like.

During the scene, anyone may issue a Challenge:

- *My guard seems to drop for a moment. Will you **roll** to take the risk and strike?*
- *I reveal a surprising new weapon. **Roll** to see if you can adapt to it.*
- *We reach a momentary impasse: what do you say to me?*
- *I make a flashy, unnecessary play. Do you let me show off?*
- *Your allies appear. Do you allow them to intervene?*
- *I push you and our fight into a new location. **Roll** to see if you find an advantage here.*
- *I make an attack that threatens innocents. Will you **roll** to ensure their safety?*

Resolutions

- *I drive you back to the point that you could flee. Do you run or stand?*
- *We are evenly matched. Will you risk something to strike me down?*
- *Your skills are undeniable. Can I convince you to join me?*

THE DISCOURSE

Everyone plays, taking the role of either members of the Authority, the Cause, or both, as key figures discuss and politic among themselves, idly or otherwise. Decide together where this conversation occurs, who else is present, and what the power dynamic between participants is.

During the conversation, anyone may ask anyone else for details on the situation and circumstances.

Playing The Scene

Players freely roleplay, issuing Challenges to escalate and complicate the Scene. Continue playing until the Scene reaches what feels like a natural end: after **THE DISCOURSE**, there is no winner or loser and no Outcomes are earned. Simply choose a Resolution as a group.

During the scene, anyone may issue a Challenge:

- *I say something insulting about a superior or influential figure. Who reacts strongest?*
- *I press someone for their opinion on something. Do you answer honestly?*
- *I arrive, dressed to kill. Whose eye do I catch?*
- *I talk flippantly about our duties. Does anyone admonish me?*
- *I offer my opinion on another Division or Faction. Whose attention do I catch?*
- *I direct a flirtatious comment towards someone. Does it take root?*
- *I openly question our current course of action. Who can reassure me?*
- *I offer to take someone aside, to dance, talk privately, or otherwise. Is my offer accepted?*
- *I make a hopeful statement about our future. Can anyone back me up, genuinely?*
- *I say something overly revealing or personal. Does anyone press me on it?*

Resolutions

- *Someone or something breaks up our discussion. Who or what, and why?*
- *Our conversation is overheard: by who?*
- *One of us makes a statement that history will look back on as prophetic: who, and what is it?*

RUNNING THE GAME

As the Director, it's primarily your job to facilitate play. To that end, you have an **agenda** and **principles** to guide your decisions and help you figure out what is in the spirit of the game. When it comes to making moves, your **director moves** give you clear options for directing the action. There's also a brief primer on **safety tools**, though I encourage you to research these more to find something that suits you, some **example foes** and guidelines for creating characters to oppose the players, and an explanation of **rivals**.

AGENDA

As a Director running Armour Astir, there are certain things you should strive for. These are your agendas. Think of these like your tenets, as you perform the sacred rites of running a fun game for your friends.

- Portray a world entrenched in conflict.
- Let the players make a difference.
- Play to find out what happens.

PRINCIPLES

Additionally, you have your principles. Your principles are things to consider when deciding what move to make, and can also serve as a reference when you're unsure if a move you want to make is appropriate.

- Give Conflict Weight
- Begin And End With The Fiction
- Fight Wars With Words (Sometimes)
- Address The Characters, Not The Players
- Build Something Diverse
- Ask Questions And Use The Answers
- You Can't Pull Punches If You Don't Throw Them
- Make Moves Off-Screen
- Keep Things Magical

GIVE CONFLICT WEIGHT

In Armour Astir, conflict reaches everyone in some way. When you present your world and the people in it, consider the effects of it on them, and the things they've been caught up in because of it. Confront your players with the consequences of their actions, and remind them that marginalised people often suffer the most during times of struggle: even if it feels like what is being struggled against isn't something directly adversarial to marginalised identities.

Armour Astir is less gritty and boots-on-the-ground than some war games, but that is absolutely no excuse not to properly consider those most hurt by conflict and excluded from the power structures used to perpetuate it in their absence. Do **not** forget those that your Authority gladly would.

BEGIN AND END WITH THE FICTION

When you make your moves, establish and ground them in the fiction before you detail what the mechanical results are. Then, return to the fiction, and show the fictional consequences of those results. Be a good example for your players: teach them to make their action clear before resolving it with dice, and then to hook the consequences back into the fiction.

FIGHT WARS WITH WORDS (SOMETIMES)

Not all fights are fought with blades. Fight your players with words, spoken or otherwise, and remind them of the impact influential figures can have without setting foot on a battlefield when the opportunity arises. If your players are so inclined, let them wield this power too: let them disarm foes with a scathing insult, or write a challenging letter that wins over a sympathetic lord. Not all problems are best solved with force, after all.

RUNNING THE GAME

ADDRESS THE CHARACTERS, NOT THE PLAYERS

As far as you're concerned, once you start the session you're no longer at the table with your good friends. To your left is Cordelian, the Arcanist, piloting his Lance-Minor Astir. To your right, the rough-and-rowdy Scout, Rio. Staring daggers at you from across the table is Mire, the Witch, whose Falcon-class Astir is currently missing an arm. So when you talk to your players, make sure you're actually addressing those Paradigms, Artificers and assorted other heroes. Ask Mire what they do, not what their player thinks they do. This helps everyone focus and keep their minds on the fiction that you're all creating together.

BUILD SOMETHING DIVERSE

War is a big, bloody thing, stretching continents as easily as it stretches time. Let your players feel the consequences of their involvement with it on more than one scale. Just as they involve themselves in the small-scale of conflict, getting in their Astirs and taking the fight to the enemy as commanded, let them involve themselves in the overarching systems of war—the politics, the organisation—and let them become valuable to the cause they fight for. Then, you can involve them in larger consequences—and if they try to run, they should find these connections they've made difficult to cut.

On a similar note, the people of your world represent a far broader set of identities and experiences than those likely represented by your players and their characters. Make sure that when you depict those people that you are not forgetting this, and do so in a way that ensures they are more than just beat-down groups that you set the Authority on for effect. Give marginalised players at your table room to take authorship and ownership of the fiction when it comes to people who share in their experiences, if that is a thing they are interested in doing. If not, be ready to listen and make changes if you misstep in your own handling of those elements. Remember too that the ways in which people are marginalised, especially when it comes to disabilities, are not always easily visible. Consider the ways in which disability affects people's daily life and routines, how this might be exacerbated or alleviated by the environment around them even when it goes unnoticed by others, and keep this in mind when making decisions about how those characters act and are presented to the table. Give disability the same focus and care you would when depicting characters who are marginalised by their sexuality, their gender or race.

Let marginalised groups of all descriptions have agency and purpose in your game, especially when the Authority would rather see them disappear. I guarantee you there is room for us.

ASK QUESTIONS AND USE THEIR ANSWERS

The shared fiction of your world is something you work on together with your players, so involve them in fleshing it out. Ask them questions about their characters, and the places and concepts related to them. If you don't know something, if you're short on interesting ideas, or you just want someone else's viewpoint, don't hesitate to ask one of your players instead. Be curious about what they want to contribute to the fiction, and help them feel invested in it by using the information they give you. This lightens the narrative load for you, helps keeps things a little varied, and also lets you have the same curiosity and surprise as the players do when something new becomes part of the story.

YOU CAN'T PULL PUNCHES IF YOU DON'T THROW THEM

At the table, you're all part of the same fiction. Your players are the stars of the show—so let them feel like it by giving them foes that feel worth their time. Characters in Armour Astir have lots of options for tilting the odds in their favour and tearing through lesser opposition: so don't be afraid of flooding the field with targets, or throwing tough and imposing foes at them when the moment calls for it. Death isn't so easy to meet for the players—**BITE THE DUST** is explicit that there is always a choice made, even on a failure—so it's better to throw punches you can pull back on as foes retreat or are called away, rather than take it easy and have everyone feel the Authority was a little toothless this time around.

RUNNING THE GAME

MAKE MOVES OFF-SCREEN

It's also important to remember that, while your players and their characters are important, not everything that happens does so right in front of them. Don't be afraid to make moves and keep things shifting behind the scenes, then present the results of those moves to the group when appropriate. There are battles the characters aren't involved in, and discussions or decisions they don't get to make. Remind them that the world is bigger than they are.

KEEP THINGS MAGICAL

Finally, Armour Astir isn't just a game about mechs and pilots. It's a game about giant magical constructs, slinging spells at each other through enchanted weapons, protected by complex rituals and powered by Channelers—powerful magic-users fuelled by innate talent, divine powers, otherworldly influences and arcane artifacts. Don't forget that!

DIRECTOR MOVES

Just like your players have moves, you as a Director have moves to help guide and codify what you can do. The players make a move when they want to do something - you make a move when;

- They roll a 6 or below on one of their moves
- When they look to you for something to happen, or can't decide what to do
- When the fiction says something should happen

Broadly speaking, the moves you have are to;

- | | |
|---|---|
| <ul style="list-style-type: none">• Make an obvious threat• Test the forces of GRAVITY• Exploit a <i>danger</i> or a <i>tag</i>• Split them up• Put them in <i>danger</i> | <ul style="list-style-type: none">• Reveal something new• Attack someone who's <i>defenceless</i>• Start a (mysterious) clock• Give an option with cost or consequence |
|---|---|

Typically, after making a move, you should pass the narrative baton back to your players by asking: what do you do?

MAKE AN OBVIOUS THREAT

Show them the barrel of the gun, tease something to come, etc. Put things on the table so everyone can see what's in play, and take that into account when making awful decisions.

"There's an explosion from behind the bay doors, and a blue Astir striped with grey dashes through the smoke directly towards you, a long blade streaking with white-hot energy. What do you do?"

"You're out of sight, moving from column to column keeping an eye on the Ambassador, when one of his guards falls out of step with the others. They reach into their coat. What do you do?"

"Back on the ship, Hargen, you watch as the construct sensor spikes upwards in two, no, three spots. Ensign Wren dials in the sensitivity and turns to you. 'Two Wolves and an unidentified third, closing fast.' What do you do?"

EXPLOIT A DANGER OR A TAG

Use the risks and perils your players have taken, and the tags on their gear, as vectors for action against them.

*"They're faster than you expect, rushing up on the side where your sensors are disrupted. You dodge just enough to make sure the blade doesn't go through your cockpit, but they carve your Astir's head off entirely instead - replace that risk (*blinded*) with a peril (*blinded*). What do you do?"*

*"You took the risk '*embarrassed*', right? As you try to walk away, Cress takes your wrist, and says 'You know, we don't have to do this in front of the others. Come with me.' She starts to pull you away as the others are leaving - what do you do?"*

"June brings her shield up, but she doesn't need it. You run the firing ritual and... nothing. Your missiles had the limited tag, and that previous salvo was your last. What do you do?"

RUNNING THE GAME

PUT THEM IN DANGER

When the players fail a roll or leave themselves exposed to harm, that's a good opportunity to hurt them by putting them in *danger*. It's up to you how severe you be here in a given situation: putting them in *peril* is a much harder move than asking them to take a *risk*, and having them replace a *risk* with a *peril* is a slightly kinder middle ground.

"He dashes out of your reach to safety, and fires a rayrifle shot directly at you. You'll need to take a risk to avoid it. Ok, now what do you do?"

"You're holding the wreck up for the time being, but your Astir just isn't made for this. You can hear and feel the grating and grinding of its parts as your arms start to buckle—take the peril 'crushed'. What do you do?"

"They don't look impressed by what you have to say at all. The guy with the helmet looks at you, and seeing how scared you look, keeps eye contact as he slowly puts his blade through the injured guard. Replace your 'scared' risk with the peril 'shaken'. What do you do?"

ATTACK SOMEONE WHO'S DEFENCELESS

If a character has stacked up enough *dangers* to become *defenceless*, they're truly in the cross-hairs and are exposed to consequences that could force them to flee, be killed, or otherwise taken out of action. When someone is *defenceless*, there's blood in the water and everyone can smell it.

"Carryl, you glance leftwards and see Paldry's Astir, smoking and immobile. She's defenceless, and does nothing but panic as one of the Coursers dashes forward, sinking its lance right through her iron carapace. What do you do?"

*"You try to step away, but Kett isn't going to let you leave even if it costs him his life. He swings the thermal axe at you, decisively. I need you to **BITE THE DUST**—what do you do?"*

*"The crowd are talking among themselves as they watch you, waiting for you to respond, but you can't find the words. Second-of-Blades gives you that smug grin again, and says 'Take your time, channeler. I can wait here all day to see how little merit your case has.' You're already defenceless, so I need you to **BITE THE DUST** and see if you can keep your cool. What do you do?"*

GIVE AN OPTION WITH COST OR CONSEQUENCE

When your players ask you how or if they can do something, give them options: and where appropriate, tell them the cost or consequence attached. This lets them make more educated choices about the fiction you're all making together.

"Sure, you can try and snatch the sword away from him, but if you mess it up you'd be putting yourself in a really dangerous spot."

"You catch that red Astir out the corner of your eye, breaking away from the pack. You could give chase, but with the damage to your mobility enchantments you'd really have to push your Astir to catch up to them: you'd have to mark 'overheating'."

"You reach out with your magic to the presence you noticed, feeling around in the ether for it. You can feel your senses dimming as you extend further and further from your body, and you know that if you keep going you risk losing yourself entirely. Do you keep going?"

RUNNING THE GAME

TEST THE FORCES OF GRAVITY

Ask a player to make a decision that calls one of their GRAVITY clocks into question, like putting someone they love in danger, or giving them a tough request from a trusted friend. They can't change their clocks until they're filled, but you can always make moves to sow the seeds of doubt—or reinforce those relationships instead.

"You're taking the time to carefully line up the shot, when you hear Function over the comms, struggling against someone. You have GRAVITY with them, right? What do you do?"

"Knight Huller breaks away from the others as he sees you leave, and plants himself between you and the door. Your clock is 'We can't help but fight when we lock eyes.', right? You could maybe still get past him if you wanted. What do you do?"

"Mishell takes you by the hand, and comes in close if you let her. She looks genuinely worried, and actually—she puts one of her hands on your shoulder, and says 'Jess, I need you to trust me. I know it seems like a lot, but I know you can do this. You're ready.' What do you do? As a reminder, your clock with Mishell is 'Always had each-other's backs'."

SPLIT THEM UP

Nice and simple—introduce something that separates the players, requiring them to deal with trouble without working together.

"Manchester, you fall behind as the three of you are sprinting through the halls. Hold and Sander make it down to the end of the corridor ahead of you, and you're catching up when the building shakes. The floor and walls in front of you crumble as an Astir backs through the building, demolishing a wide portion of it and cutting you off from the others. What do you do?"

"You watch the others swipe their stolen sigils against the crystal, and the lifts take them upwards. It goes red when you do yours, though, and instead you start descending. You know what's on the floor below, right? What do you do?"

"June, you manage to quickly boost your way out, so you're safe. Sear, though, you're not quite so lucky. That grey Astir didn't just stab you, the spear went through your armour and it's pinning you to the inside of the chamber. You can hear the hum of the macrospell charging, and see June rushing to safety in the distance. What do you do?"

REVEAL SOMETHING NEW

Reveal something new to the players that complicates things for them.

"Ok, ok. That's a six, but you don't fail here actually. There's a hiss of pressure as the Lovesong's cockpit opens, and the pilot gets out. It's like looking into a mirror, Coln. It's your brother. What do you do?"

"You dash forwards, bringing your axe down towards Hill as he staggers backwards, but his guard hasn't fallen. It was a feint, Lottie. He steps under your swing and tugs the weapon loose from your grip. I'm erasing his 'stunned' risk, and you should take the risk 'disarmed'. What do you do?"

"There's a huge cracking noise, and all of you—even the people who aren't channelers—feel the magic in the air around you get stronger instantly. Up in the sky, the clouds break as the Ophelian Engine tears into your plane of existence. What do you do?"

RUNNING THE GAME

START A (MYSTERIOUS) CLOCK

Start a clock to represent a countdown until something happens, progress towards something, etc. Label it, or leave it a mystery: either way, a ticking clock creates pressure on the players and leaves them anticipating whatever is to come. Clocks typically have 4, 6, or 8 segments, but you could make a larger one if you wish, or divide something into multiple shorter clocks.

You should also decide what advances these clocks: will they fill on their own over time, are they something that ticks up when the players fail moves or ignore a threat, or do the players need to take action directly to advance it? Whatever the method, when a clock is filled, it should be a big deal. Everyone should know about what happens next.

SAFETY TOOLS

When playing tabletop games, even with people you're intimately acquainted with, there can be situations in which topics and imagery players aren't comfortable with can arise. It's important to communicate clearly ahead of time to help keep everyone at the table safe.

Personally, I recommend at very least having a 'Session 0', where players and the Director can make characters together and discuss what kinds of play and subjects they're interested in tackling. However, this alone doesn't provide a framework for the group to step back in the event that something unexpected and potentially triggering comes up during play.

To help with that, there are a number of safety tools groups can use to help avoid these situations that, even if they aren't used, better communicate the boundaries of everyone at the table. You should discuss as a group what safety tools, if any, you will be using.

Provided below is info on a few I am personally familiar with, but there are more out there - I encourage you to talk with your players and look up tools that suit your needs. There is no end-all be-all of safety tools other than open, honest communication with the people you play games with. While they can be helpful, they are no replacement for treating each-other with genuine care.

THE X-CARD

The X-Card is a simple method by which players can veto content during a game, signalling to everyone that they wish to step back from whatever has been flagged. It is a card with an X on it, that, should a player be uncomfortable with something that arises during a session, they can tap or raise to signal their discomfort. The group steps back or edits out the signalled content.

More information on the X-Card and examples of its use can be found at tinyurl.com/x-card-rpg.

LINES & VEILS

Lines & Veils is a system where players can designate topics as a boundary for them at two levels - as either a 'line' or a 'veil'.

- Lines are hard limits. A 'line' is something that should not come up during the game - it is something that a player has communicated that they do not want present in their role-play.
- Veils are soft limits. A 'veil' is something a player has communicated they wish to 'fade to black' or 'pan away' from. Unlike a line, they are ok with it being present in the story—just not with it being a focus.

More information on Lines & Veils and examples of its use can be found at rpg.stackexchange.com/questions/30906/what-do-the-terms-lines-and-veils-mean.

STARTING & ENDING YOUR CAMPAIGN

STARTING A CAMPAIGN

Session 0! There are few better ways to start a campaign than all getting together and making your characters together. In Armour Astir specifically, you'll also want to sketch out the Authority and Cause with your players, and take notes on the things your players show interest for when you expand on them later. As for your first Sortie, it can be best to draw some thoughts from the table on what they think the relationship between their characters looks like at the start of the campaign. Are they unfamiliar heroes, waiting to be brought together by fate, or are they already a friendly crew working within the Cause? What does life look like under the Authority for them, and what form does resisting it take?

If most of the characters are new to the Cause, it can be fun to play the inciting incident that brings them all together. Did some of the crew steal Astirs during an attack by the Authority on their homes? Did someone defect from a Division while it clashed with the Cause?

If everyone is an established crew already, you have plenty of options too. Do you start with a Sortie that reveals a change in the status quo, or makes something new possible for the Cause? Is this Sortie the first open move the Cause has made, operating quietly until this moment?

ENDING A CAMPAIGN

Eventually, you will want your campaign to end. All good things do, after all. The back and forth of the Conflict Turn will likely eventually end with the Authority at 0 Stability, ripe for defeat, but there's more you can do to manage the length of your campaign.

Generally, it's a pretty good idea to think about how long you want the campaign to run, and talk about this with your players. Are your players happy to keep playing however long it takes, letting the events of the Conflict Turn and the choices they make define it? Or do you have a specific length in mind? 6 sessions? A certain amount of Sorties, however many sessions it takes to get through them?

With that info in mind, if you've ran a game or two before you might already have a pretty good idea how to end your campaign when it's the appropriate time. You're well within your rights to hand the players other opportunities to damage the Authority's Stability through their Sorties, or you might even choose to just automatically reduce it throughout the course of play, landing them at 0 when you're ready for your big finale.

Whatever happens, feel free to bend the rules a little to end your game in a way that works for your group.

PREPARING & ENDING SESSIONS

PREPARING SORTIES

When preparing Sorties, a good starting place is to look at your player's character sheets. What are their Hooks and GRAVITY clocks flagging? Where do their skills lie? What do their moves equip them for, and what don't they?

It's always a good idea to look over your notes from previous Sorties and Downtimes, if this one isn't your first. Your players probably expressed interest in certain characters and story elements: these are always good things to consider bringing back in the future. Additionally, did the events of the Conflict Turn highlight any new opportunities for the players? Have new weaknesses been exposed in the Authority to exploit, or do desperate Factions need their aid?

If it's your first Sortie, you won't have previous ones to look back on, but hopefully you had the good sense to run a Session 0 with your players. Among other things, your first Sortie is a great thing to discuss with them as they make characters, as it's a great way for those characters to be introduced to each other and even the Cause if they are personally starting outside of it.

When it comes to opposition, the key thing to remember is the amount of *dangers* they can take. Main **actors** can take up to 3, putting them on par with players: they'll take multiple successful moves to dispatch, giving the people making the rolls ample room for failure. Side and Extra foes on the other hand can take only 2 or 1 respectively, making them easier to get rid of and much easier to present to a group in larger numbers. If you really want a larger amount of **actors** 'on-screen', you can even consider using squads to represent large numbers of quickly-dispatched foes. Generally, given the free-form action economy of games like Armour Astir that do not use turn based combat, putting a few Main or Side characters in front of your group makes for a much riskier 'encounter' than a large number of Extras.

PREPARING DOWNTIME

When the table is heading into Downtime, you as the Director have much less work to do. By picking out their Moves, the rest of the group will be directing scenes on their own terms, meaning your role is mostly reactive. All you need to really do is be prepared to make some moves should anyone fail, lend a hand by playing Director characters during scenes, and look out for opportunities to sprinkle in information on the events of the Conflict Turn.

Good things to think about ahead of Downtime, then, include:

- What *risks* and *perils* everyone has: what moves might they take to clear them? What could go wrong on a failed move?
- Who is around that could get involved in their moves? Do any players have GRAVITY clocks with Director characters that you should spotlight?
- What happened during the Conflict Turn? Do you need a scene or two to set up larger events? Is there anything small that can come up during theirs?

ENDING A SESSION

When ending a session, it's a good idea to give yourselves some space—maybe ten, twenty minutes or so—to cool down and go over the events of the session. Is everyone happy with how things went? Is there anything people want to discuss, or see more or less of in future sessions?

It's also a good time to check over the progress people have made on GRAVITY clocks and Spotlight. Has anyone forgotten to tick up their clocks? Are there clocks that are close to being filled that people should pay extra attention to next time?

As the Director, it's also a good time to take notes on things the players have flagged as things they're interested in this session. Are there characters you introduced that they responded well to? Plot threads you thought weren't important that they couldn't help but pull at? These are the kinds of things you can carry forward and bring back later to help them feel engaged and important to your shared fiction.

CREATING ACTORS

Actors (or non-player characters in more common parlance, though the GM of a game is also a ‘player’) are any characters other than those created and owned by the players. When they appear on screen, the Director is typically responsible for their actions, though where appropriate you could (and should) find opportunities to let players step into their shoes.

When creating an **actor**, you first need to think about how important they are. **Actors** are ranked as either **extras**, **side** or **main** characters. Extras are those who are only important in their opposition to the player characters: the rank-and-file, the nameless soldiers, etc. Side characters are those that have some minor importance to the story: if they’re important enough for a player to know their name, they’re probably at least a Side character. Finally, Main **actors** have a larger role, appearing fairly often and having an impact on the world similar to or beyond that of the players.

When making a Main **actor**, someone who is important to the story you’re telling and likely to be on-screen often, come up with three adjectives to describe them. For a Side **actor**, someone who will appear more than once but isn’t quite so important, come up with two. For Extras, who are unlikely to appear more than once (and are likely to end up dead), a focus on one adjective can help their short time on screen feel nice and sharp. If you know a character might involve themselves with the players in a more hostile manner—say, if they’re one of the Authority’s **actors**—you might choose a tag or two instead of some of your usual adjectives. Saying someone is resolute means something, but saying someone is *decisive* has specific mechanical effects.

If you want to come up with additional details or backstory ahead of time for Main or Side characters, feel free—but putting that degree of effort in for Extras is likely to be wasted time.

When creating the Authority and Cause, the characters you come up with that lead or influence those groups are most likely Main or Side **actors**. That said, **actors** can move between these classifications in play wherever appropriate. Sometimes you bring on an Extra without realising how in love with them the players will become.

When a player makes a GRAVITY clock with one of your **actors** or a Faction/group, they are signalling that they want them around often to interact with and advance that clock. If for some reason it isn’t feasible to give that **actor**/Faction/group regular presence in the game, you might agree to shorten that GRAVITY clock to 4 segments instead of 6—allowing it to be completed in fewer moves or interactions.

CLASHING WITH ACTORS

Naturally, players can and will probably spend a lot of time fighting against and opposing the actions of **actors** on account of the Authority being made of them (if a player is a member of the Authority something has gone drastically awry).

In conflict, a character’s status as either an **extra**, **side** or **main actor** determines how many *risks* and *dangers* a player needs to inflict on them to make them *defenceless*.

Extras are *defenceless* at one *danger*, meaning they are dealt with pretty quickly in straightforward conflicts, or even immediately vulnerable when in a situation where they might be at *risk* already—a character attacking them when they’re unaware, etc. Extras are perfect for the rank-and-file or enemies that attack in massed numbers.

Sides are *defenceless* at two *dangers*, making them a little more involved to deal with. Even in a situation where they’re at *risk* to begin with, you’d still need to inflict a second on them to **STRIKE DECISIVELY**, making them less resilient than the players but still someone they need to confront properly.

Mains are *defenceless* at three *dangers*, making them equal to players in this regard. Mains should be a challenge the players can’t ignore—someone they might tangle with on more than one occasion, who feels like a fair match for them (at least one-on-one).

RUNNING THE GAME

If you know an **actor** is going to be involved in fighting, there's some additional details you might want to come up with for them. You'll need to decide their tier, as described above in [Conflict & Tiers](#). This defines broadly what they are effective against, and what is effective against them. You will also want to determine what [approach](#) they use in combat, which gives them weaknesses and strengths against certain opposition.

Finally, give them whatever equipment, attacks or bonuses that feel appropriate for who they are and what their role is, either from the example lists or made fresh for your game. For Extra-level monsters, creatures, or other foes that you want to keep simple, you might forgo giving them this level of detail and just give them a note like 'this **actor's** attacks have the *bane* tag' or 'this **actor** has the *ward* tag'. Keep a few things in mind, though;

- *Bane* and *ruin* lets anyone hit effectively above their tier.
- For simplicity's sake, **actors** who pilot Astirs don't have Power or **SUBSYSTEMS** unless you decide specifically otherwise.
- Weapons used by **actors** might be stolen or picked up by players, and vice versa.
- You don't need to build the Astirs used by **actors** using the normal rules.
- Similarly, 'weapons' that aren't things players could take—like the natural attacks of creatures with claws or firebreath—don't need to have a balanced set of tags.

SQUADS

When **actors** are attacking in large numbers, they fight as a squad (aka a small gang). When engaged in combat with a squad of your tier or higher while alone, your rolls against them are made at **disadvantage**. You can ignore this if using a weapon that has the *area* tag. A squad being defeated doesn't necessarily mean the entire group has been killed—they might simply scatter or retreat where appropriate—but doing so removes the **disadvantage**, as does disengaging from the fight or acquiring backup. Players acting as a squad somehow roll with **advantage** unless it is countered in a similar way.

EXAMPLE FOES

The following pages have some example foes of various ranks and tiers, broadly categorised into;

- Astirs & Ardents
- People
- Creatures & Monsters
- Outsiders

These aren't the only kinds of creatures and things that can exist in your world, obviously: this list is by absolutely no means exhaustive, and is just comprised of examples to inspire your table.

RUNNING THE GAME

ASTIRS & ARDENTS

Like those piloted by the players, Astirs and Ardents are the mainstay of most Authorities when it comes to warfare. Whether grown from the soil, forged in foundries, or summoned from another plane, all Astirs have something in common: they are exceptionally dangerous in the right (or wrong) hands.

UNPREPARED CADET III (EXTRA: SNEAKY) (MUNDANE)

- Sidearm I (*ranged / defensive, weak*)
- Omen III (*mundane*)
 - Magic Focus III (*ranged / defensive, 2H*)

"U-uh, reporting for duty, sir! Ready to skirmish."

MILITIA LABOUR PILOT II (EXTRA: AMBITIOUS) (ARCANE)

- Sword, Axe, Mace I (*melee*)
- Service Ardent II
 - Ardent Fists II (*melee / intimate, defensive*)
 - Condenser Stave II (*ranged / refresh, 2H*)

"Simple bipedal constructs, Service Ardents are still capable of doing the work of ten men. If only we had more of them."

BANDIT SKIRMISHER PILOT II (SIDE: OVERCONFIDENT, MEAN) (MUNDANE)

- Sword, Axe, Mace I (*melee*)
- Skirmisher Ardent II
 - Hefty Blade II (*melee / messy, area*)

"Quit bragging, Marco. It's not much of a competition when we have to scrap and fight to pull down one servo, but you can cut down two in one swing."

MERCENARY ASTIR PILOT III (SIDE: PREPARED, AMENABLE) (DIVINE)

- Raypistol I (*ranged / bane, limited*)
- Wolf III
 - Rayrifle III (*ranged / infinite, 2H*)
 - Forceknife (*melee / intimate, decisive*)

"There's our print on the steelwork, sure—but everything else is new. The benefit of... diverse employers."

AUTHORITY ACE IV (MAIN: IDEALISTIC, BOLD, VOLATILE) (PROFANE)

- Raypistol I (*ranged / bane, limited*)
- Cobra IV
 - Forceblade IV (*melee / bane, drain*)
 - Burstcaster IV (*ranged / area, bane, messy, 2H*)

"Cobra, mark one. Launching."

MECHANICAL KNIGHT II (MAIN: NO-NONSENSE, CALM, DECISIVE) (MUNDANE)

- Shatterlance II (*melee / bane, impact, reload, 2H*)
- Sword/Axe/Mace I (*melee*)
- Warded Plate (*ward*)
- Steed Ardent II
 - Iron Hooves II (*melee*)

"Cavalry? Of a sort, I suppose. Just stay out of our way."

RUNNING THE GAME

PEOPLE

People come in all shapes and sizes, from all walks of life, with all kinds of identities. They're you, and they're me.

ANTI-CONSTRUCT TEAM I (EXTRA: SNEAKY) (ARCANE)

- Rayrifle I (*sniper / reload, ruin, 2H*)
- Shortswords I (*melee*)
- Arcane Generator I (*Ignore reload on weapons*)

“Stop complaining, kid. It won’t feel heavy once you see it put a hole in an Astir.”

MILITIA I (EXTRA: ENTHUSIASTIC) (MUNDANE)

- Sword, Axe, Mace I (*melee*)
- Ardentbane Crossbow I (*ranged / bane, 2H*)

“People like you or me, ready to fight for what they believe in. Or to keep their homes, at least.”

RIFLEMAN I (SIDE: CAUTIOUS, FRESH-FACED) (MUNDANE)

- Sword, Axe, Mace I (*melee*)
- Snaplock Rifle I (*ranged / decisive, vorpal, distinct, reload, 2H*)

“Heads down, hold fire. Don’t shoot back until you hear the snap.”

KNIGHT I (SIDE: DISCIPLINED, RESILIENT) (MUNDANE)

- Great Weapon I (*melee / bane, area, messy, 2H*)
- Warded Plate (ward)

“Clad in steel, bearing blades almost as tall as they are, and carrying the confidence of a nation. Once upon a time that was all an army needed.”

SCOUT II (MAIN: ATHLETIC, SHARP, SNARKY) (MUNDANE)

- Scourblade II (*melee / bane, 2H*)
- Raypistol I (*ranged / bane, limited*)
- Grappling Rig I

“So, bad news about the captain. Someone swung out of a tree and stuck a broadsword through his cockpit.”

PATHFINDER I (MAIN: QUIET, CAREFUL, PREPARED) (MUNDANE)

- Blessed Bow I (*sniper / decisive, 2H*)
- Hatchet I (*melee*)
- Invisibility Cloak I (*valuable, fragile, makes you invisible*)

“Arrows have to come from somewhere! Spread out. Search the treeline.”

RUNNING THE GAME

CREATURES & MONSTERS

All sorts of things lurk in the deep, dark corners of this land. Some of nature, some not so much.

WOLF I (EXTRA: FEROIOUS) (MUNDANE)

- Tooth & Claw I (*melee*)

"Hail, adventurer. Prithee bring me ten wolf asses, so that I might fashion you a belt."

GIANT SPIDER I (EXTRA: SKITTERING) (MUNDANE)

- Fangs I (*melee*)
- Spinnerets I (*ranged / restraining*)

"Scouts say they found an Astir in the northern forest, covered in so much webbing they couldn't move it at all. No sign of the pilot. Probably for the best."

OWLBEAR II (SIDE: TERRIFYING, RESILIENT) (PROFANE)

- Rending Claws II (*melee / decisive, 2H*)

"Look, I don't care if you believe me or not. I'm not going back in without an ardent. Not while that thing is in there too."

WYVERN III (SIDE: HUNGRY, FLYING) (ELEMENTAL)

- Fireball III (*ranged / area*)
- Rending Claws III (*melee*)
- Fireproof Scales III (Cannot be harmed by fire)

"If you can see their shadow pass on the ground, it's too late. Your best bet is to hope that when they descend, it's not you they're after."

FROST DRAGON V (MAIN: IMPERIOUS, CRUEL, FLYING) (ELEMENTAL)

- Rimebreath V (*ranged / area, reload, restraining*)
- Tail Sweep V (*melee / area*)
- Frostbound Hide V (*ward*)

"The final count? Two companies of men, their assigned ardents, and a full wing of astirs."

LANDSHARK Matriarch IV (MAIN: TERRITORIAL, HULKING, EVASIVE) (MUNDANE)

- Crushing Jaws IV (*melee / messy, bane*)
- Digging Claws IV (Can dig and swim through earth or sand)
- Tremorsense IV (Can detect foes through vibrations in the ground)

"The worms? Oh, no. You can feel them coming from miles away. No, it's the sharks you want to worry about."

RUNNING THE GAME

OUTSIDERS

Extraplanar creatures, those from worlds beyond ours, are broadly referred to as 'outsiders'. Unbound by natural law, outsiders are often inherently magical.

IMP I (EXTRA: TRICKY) (PROFANE)

- Devilish Firebolts I (ranged / bane)

"Among the lowest orders of devils, but dangerous in their own right."

FROST MOTE I (EXTRA: FREEZING) (ELEMENTAL)

- Freezing Touch I (melee / restraining)
- Ice Shard I (ranged / bane, reload)

"Set a fire burning tonight, have someone keep an eye on it. Mara said she saw motes blow in on the wind last night."

LOWLY ANGEL II (SIDE: UNPREDICTABLE, RADIANT) (DIVINE)

- Divine Flame II (ranged)

"The shapes of angels seem strange, but why pretend to understand the work of the divine?"

VOID GIANT III (SIDE: DESTRUCTIVE, DRIVEN) (MUNDANE)

- Obelisk III (melee / messy, 2H)
- Voidborn (Doesn't need to breathe or eat, is immune harm from cold)

"They came from above. Down from the skies, from the deep darkness of night."

PIT FIEND III (MAIN: CRUEL, AMBITIOUS, LAWFUL) (PROFANE)

- Abyssal Warmace III (melee / bane, messy)
- Hellish Regrowth (Perils from physical harm reduced to risks)

"Leading any gathering of devils will be a pit fiend. Unlike the lesser creatures beneath them, these fiends have the strength and tenacity to match their cruelty."

TERRA, TITAN ALIVE V (MAIN: INDIFFERENT, STOIC, BRUTAL) (ELEMENTAL)

- Erupting Earth V (ranged / area, messy)
- Titanic Punch V (melee / slow, ruin)
- Uncaring Gaze (Doesn't notice things III or lower unless directly interfered with)

"The elemental planes have no king or governor, and they never will. One would have to wrest power from the waking earth itself."

RUNNING THE GAME

RIVALS

Rivals are recurring characters who appear again and again to challenge specific players who have earned their attention. Mechanically speaking, they are Main **actors** with a GRAVITY clock with whoever they're the Rival to. They also have a Need (what their faction demands of them, what they are obligated to do, etc), and a Want (what they want from their counterpart), which helps direct their fiction but also provides them with **LEVERAGE** the Director may use against their counterpart (whichever player is involved with a particular Rival).

LEVERAGE

When your counterpart interferes with your Need or indulges you in your Want, hold 1. You may spend this hold whenever 1-for-1 to do the following:

- Make them act in **confidence** or in **desperation**.
- Ask a challenging question that must be answered.
- Appear somewhere you aren't expected.

Rivals don't need to explicitly be foes that are gunning for a player in an antagonistic way. They might be an allies with a competitive relationship, someone they are trying to impress (or vice versa), and so on.

NAME:	Corel White
NEED:	To follow her orders to the letter
WANT:	To learn more about the Ilgard's music
GRAVITY:	+2 ■■■□□□

NAME:	Bromwael
NEED:	To be rewarded by the Associate
WANT:	To fight their rival alone
GRAVITY:	+3 ■□□□□□

EXAMPLES OF LEVERAGE

Lilette, an Arcanist, is crossing blades with her Rival, Kett. She has forced them into a corner and made them *defenceless*. There's no love lost between the two of them, so Lilette takes the opportunity and tries to **STRIKE DECISIVELY**, driving her trice-forged blade right through the chest armour of Kett's astir. Kett, however, has hold to spend. They spend it to force Lilette to act in **desperation**, the Director narrating as they release a wave of shocking force from their Astir to try and stay Lilette's blade.

Dani is struggling against Cress, her Rival. Rain is pounding against the rooftop they are fighting on, and Dani has been knocked over, crawling along the slick roof-tiles to try and grab their dagger. Before she can reach it though, the Director spends one hold to ask a challenging question that must be answered. Cress calls out through the storm: "Did what we had mean *anything* to you?"

SETTING & MISSION HOOKS

The next section of the book is dedicated to Setting & Mission Hooks.

Setting Hooks serve as examples of the settings you might play Armour Astir in: each containing an example Cause and Authority, some key locations, factions and characters, and even some variants of example gear and Astirs. Take them whole-cloth, scavenge from the bones, or simply use them as inspiration.

Similarly, Mission Hooks provide a quick scenario outline with options for customising it to match the setting and players of your game. If only part of a hook interests you, cut it out and just use that! You could even take elements from various hooks and combine them, just like any of the other example content in this book.

THE GHOST REACHES

OVERVIEW

The Ghost Reaches are a bustling, dense archipelago, that stretch from the many temperate southern islands up to the frigid Isle of Repose. Named for an old local legend, which described how wayward spirits would make a pilgrimage from island to island, eventually coming to a final rest at Repose.

The Reaches, while once divided by fierce rivalries, have long since been united under a ruling council consisting of democratically elected delegates from each island. How many delegates an island may elect is based on a number of factors, like population, how much trade value their ports provide to the Reaches, and so on. While in their warring days many of the islands struggled to be self-sufficient, co-operation has allowed them to find new identities and niches in regards to what they provide those that live there and the Reaches at large. These transformations in infrastructure and industry have left the Reaches a prosperous but lightly defended place, much of its military returning to civilian life in the post-unification period.

In recent years, this attracted the attention of the Faces Of Progress, an industrial-militaristic faction from the continent to the west. Seeking access to the Reaches' resources and workforce, the Faces Of Progress made a rapid, unexpected move to capture the Isle of Repose and re-purpose it as a staging point from which to move on the entire region. Opposing them (and their now-frequent raids on nearby islands) is The New Hunt, a loose militia that cobbles together Astirs from what local craftsmen can spare and parts taken from creatures on the Isle of Kings.

AUTHORITY: THE FACES OF PROGRESS

The Faces Of Progress, having recently grown from 'vampiric cohort', to 'cabal of industrial magnates', to 'sovereign state', is quickly becoming the production centre of the known world. Their factories produce everything from cutlery to armed Astirs, in dizzying quantities. To keep this up and expand even further, they find themselves in need of new sources for raw materials, a need they see fit to address by force. The Ghost Reaches is merely first on their list: once it has been strip mined and levelled to make room for factories, Progress will be made somewhere else.

Leader: The invasion of the Reaches is led by Galinn Juriss, a former mine foreman who proved himself as a natural military leader during the Faces' violent transition from business to nation. Rumour has it the Faces' true leadership has shared a certain sanguine gift with him.

Aesthetic: Porcelain, damage repaired with gold lacquer. Leather padding and patterned silks. Golden trims and ornamentation. Exposed tubing and scarlet liquids.

CAUSE: THE NEW HUNT

Formed in reaction to the Faces Of Progress seizing the Isle of Repose, The New Hunt is a loose militia of a few dozen resistance cells, doing what they can to prevent their foes gaining any more of a foothold in the archipelago.

Leader: The New Hunt has no overall leader, with cells acting largely independently.

Aesthetic: Monster bones, horns and teeth. Recycled driftwood, iron chains and bolts. Colourful paintwork, kill tallies and trophies.

THE NEW HUNT

OVERVIEW

Formed in reaction to the Faces Of Progress seizing the Isle of Repose, The New Hunt is a loose militia of a few dozen resistance cells, doing what they can to prevent their foes gaining any more of a foothold in the archipelago.

Leader: The New Hunt has no overall leader, with cells acting largely independently.

Aesthetic: Monster bones, horns and teeth. Recycled driftwood, iron chains and bolts. Colourful paintwork, kill tallies and trophies.

EXAMPLE Factions OF THE NEW HUNT

King's Isle Couriers (Guerillas)

Once upon a time, the KIC were your best bet for getting packages quickly and safely across the Isle of Kings. With the Faces of Progress on the scene, they've turned their pathfinding skills and secret routes to slightly different ends.

TAPPED?

GRIP

The Beached (Military)

An offshoot of a mercenary company, The Beached washed up on shore after getting caught in crossfire during the Faces' initial invasion. In following with their company's code, they quickly set about converting their wrecked ship to a local HQ and scheming against their accidental attackers.

TAPPED?

GRIP

Sif's Sleepers (Strange)

Many were displaced when the Isle of Repose was seized, including the many priests that tended to its restful temples. Those young and angry enough to turn their sorcery against the Faces banded together as Sif's Sleepers.

TAPPED?

GRIP

The Reaches Unity Fund (Suppliers)

With the Reaches' actual military slow to mobilise, many influential and resourceful individuals collected together to form the Unity Fund, a thinly-veiled operation to financially back the various resistance cells of The New Hunt.

TAPPED?

GRIP

Calistone (Bandits)

Calistone were a small-time band of thieves who just happened to have a very well-hidden route in and out of Repose at the time of the invasion. Though the route was only good for one heist, the spoils of Progress were enough to take them from an amateur group to a well-tooled organisation.

TAPPED?

GRIP

Loreth Tidal Guild (Scholars)

The Tidal Guild is responsible for maintaining a system of dams and locks that keep Loreth Island inhabitable following a magical accident that sunk it a few meters below sea level. Their engineering expertise also made them naturals at disrupting arcane fortifications and Astirs belonging to the Faces Of Progress.

TAPPED?

GRIP

THE FACES OF PROGRESS

OVERVIEW

The Faces Of Progress, having recently grown from ‘vampiric cohort’, to ‘cabal of industrial magnates’, to ‘sovereign state’, is quickly becoming the production centre of the known world. Their factories produce everything from cutlery to armed Astirs, in dizzying quantities. To keep this up and expand even further, they find themselves in need of new sources for raw materials, a need they see fit to address by force. The Ghost Reaches is merely first on their list: once it has been strip mined and levelled to make room for factories, Progress will be made somewhere else.

Leader: The invasion of the Reaches is led by Galinn Juriss, a former mine foreman who proved himself as a natural military leader during the Faces’ violent transition from business to nation. Rumour has it the Faces’ true leadership has shared a certain sanguine gift with him.

Aesthetic: Porcelain, damage repaired with gold lacquer. Leather padding and patterned silks. Golden trims and ornamentation. Exposed tubing and scarlet liquids.

EXAMPLE DIVISIONS OF THE FACES OF PROGRESS

The Juriss Company (Military)

Galinn Juriss’s personal expeditionary force, sent to claim the Ghost Reaches for his vampiric masters. Galinn is eager to improve his position: there are few within the Faces of Progress who have their own armed Companies, but there are fewer with their own lordships.

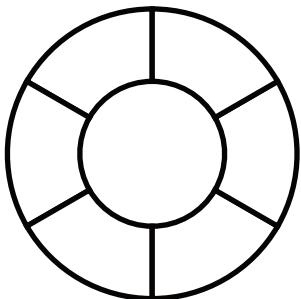

Progress’s Promise (Curator)

Members of the Promise dedicate their lives to recording and preserving evidence of progress: where ‘progress’ is the many conquests of their vampiric masters. This typically involves plundering the lands taken by the Faces for artifacts and heirlooms to study... or just put on display.

Artery #23 (Resource)

The many Arteries of the Faces Of Progress transport goods, weapons, and that sweet sweet sanguine wherever they are needed. #23 is tasked with aiding and abetting the Juriss Company in their many endeavours.

EXAMPLE SCHEMES OF THE FACES OF PROGRESS

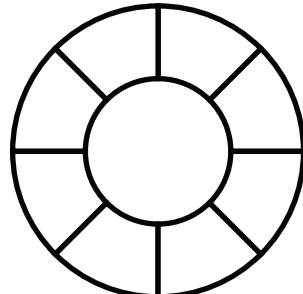

Pacifying The Isle Of Kings

Sinnh Renere, an agent of Artery #23, thinks something can be done to make the Isle Of Kings’s wildlife ignore Juriss Company troops.

A Watchful Eye

An extensive checkpoint system between islands would be tough to install, but would heavily restrict movement of The New Hunt.

SETTING HOOKS

EXAMPLE ASTIRS OF THE GHOST REACHES

CLIPPER III	MUNDANE	CORE	POWER	2
		ANCIENT	OVERHEATING	■
WARDING	SPELL ROUTINES			
RUGGED BUILD (+ward)	Choose to take a result of 7-9 on a WEATHER THE STORM			
<i>Clippers are large, rugged Astirs originally designed for patrols over the Isle of Kings, keeping the roads clear of overgrown fauna. The New Hunt has re-purposed an entire fleet of them for war, a task they are more than fit for.</i>			MV: CUTTING ARMS	
			You may use the SUBSYSTEMS move to remove a environmental hazard of your choice.	
CARRIED	Hewer III (melee / bane, drain)			
CARRIED	Force Repeater III (ranged / defensive, weak)			
PUNCTURE III	PROFANE	CORE	POWER	2
		OCCULT	OVERHEATING	■
ARCANE FORGE	RESISTANCE CHARM			
You may COOL OFF to resupply an expended weapon	CLARITY COVENANT (Lowers dangers from stunning/dazing)			
<i>Punctures are the rapier of any Faces Of Progress squad, designed to be let loose on particularly dangerous foes. Carrying large blood-fed spellcannons, Punctures are best dealt with harshly: focusing rituals mean middling blows will do little to sway their aim.</i>			MV: FOE EYE	
			You can always assess which foe before you is the most dangerous.	
CARRIED	Spellcannon III (ranged / versatile, blitz, drain 2, 2H)			
SHEATHED	Forceknife III (melee / bane, intimate)			

EXAMPLE GEAR OF THE GHOST REACHES

Bloodletter I (melee / distinct, defensive)

The rank-and-file of the Faces Of Progress carry these sinister spears, mundane in nature but by design capable of drawing the blood of their victims. Those not of the rank-and-file, it turns out, have an unquenchable thirst.

Ashmaker Bow I (ranged / ruin, decisive, dangerous, 2H)

Ashmakers were just a theory until the invasion began: one the New Hunt have taken pleasure in putting into practice. Immensely dangerous alchemical arrows paired with a bow ritually treated with the protections needed to withstand them, Ashmakers are the prized possession of any resistance cell.

Little Shark II (melee / intimate, freezing)

When the first mariner's ardent team was dispatched to interfere with Progress reinforcements, they found their equipment lacking for undersea use. Dubbed Little Sharks, these ardent-fit wands stacked with short-range frost magic provided an easy way of ruining ship hulls.

Decanting Staff III (ranged / bane, 2H)

A long staff, held in both hands of an Astir. A series of alchemical processes purify and extract magical energy from stolen blood, before turning it to violent ends.

Hewer III (melee / bane, drain)

A circular saw, spun at lightning speeds by the volatile reaction between distilled alchemical fire and permafrost from the deep heart of Repose.

MISSION HOOKS

THE GRAND MELEE

The Authority has arranged a grand tournament between Channelers. It has invited would-be challengers from [around the country/within its military/around the world] to fight in their Astirs [one-on-one/in teams] and compete for [glory/a grand prize/a blessing/an important role]. Little do the challengers know, however, the Grand Melee is simply an opportunity for the Authority to [show off a new Astir/kill off skilled channelers/steal custom Astirs/recruit channelers].

PLACES

An Astir workshop, where:

- Artificers are dismantling a heavily damaged Astir
- Trainee Artificers are being taught the basics by the workshop chief
- Everyone is working together on an emergency/large repair job
- An injured channeler is being freed from their destroyed Astir

A lounge where;

- Channelers are waiting between tournament bouts
- Rich spectators are watching the tournament from safety
- Authority officials are debriefing their plans for the tournament
- The players can relax, whilst secretly being observed

The tournament grounds, where;

- Some challengers are being a little too secretive about their Astirs
- A boisterous Channeler is looking for a fight to tide him over
- The Authority is openly recruiting channelers
- Someone is itching to cause trouble

PEOPLE

An ace Authority channeler who is;

- Waiting for the perfect opportunity to betray their masters
- Desperate to prove their true worth
- Taking part in the tournament as penance

An artificer who is;

- A double agent
- Sabotaging any Astirs they work on
- Looking for a promising channeler to give an experimental upgrade

A mercenary channeler who is;

- Here for revenge
- Trying to find a place for themselves
- Ready to cause a whole lot of trouble

THINGS

- | | |
|--|---|
| <ul style="list-style-type: none">• Ruined banners• A lost badge of office• A malfunctioning weapon• A rare magical focus• Crates of alchemical supplies | <ul style="list-style-type: none">• A vandalised altar• Books full of odd rituals• A storm in a teacup• A trapped storeroom• A mythical sword |
|--|---|

MISSION HOOKS

— NEUTRAL GROUND —

The Cause has learned of a secret Authority project set up in a supposedly neutral city. It has sent the players to [scout out/steal/destroy] the project, which is [*an experimental Astir/a dangerous magical experiment/a secret arms depot*]. Complicating this is the fact that the Cause [*has no intel on the nature of the project/is hiding something from the players/has been fed false information*].

PLACES

An entry checkpoint, where:

- Overworked employees aren't checking anyone's papers
- A recent event has extra attention being paid to inbound parties
- Someone is trying to smuggle goods into the city
- Some Authority soldiers are making a scene

A warehouse where;

- Authority personnel can enter their secret base
- A Cause agent has stored something valuable
- Astirs are being covertly stored
- A third party is trying to avoid suspicion

The forest nearby, where;

- The Authority is secretly testing something
- The magically enhanced trees are being directed to Authority lumberyards
- A large clearing makes for a perfect ambush spot
- Someone is itching to cause trouble

PEOPLE

A rookie Authority channeler who is;

- Far, far too naïve
- Personally invested in the success of the project
- An old friend of one of the players

An artificer who is;

- Helping cover up the project, since it might lead to other advancements
- Posing as a civilian while spying for the Authority
- Sheltering smuggled Cause resources

A Cause agent who is;

- Here on completely unrelated business
- Way in over their head
- Looking for help getting somewhere they shouldn't be

THINGS

- | | |
|---|--|
| <ul style="list-style-type: none">• Stolen alchemical supplies• An abandoned Astir• A hidden weapons cache• An unfinished ritual• Strange remains | <ul style="list-style-type: none">• A broken chain• Forged documents• A trail of blood, still wet• A seeing orb• Smuggled luxuries |
|---|--|

MISSION HOOKS

ELEVENTH HOUR

The Cause has learned that the Authority has developed [*a macrospell/an Astir/a magical weapon/something strange and arcane*] capable of ending the war in one fell swoop—in their favour, of course. It falls to the players to [*discover its secret location/destroy it/seize it for the Cause*] before the Authority can use it to [*force Cause leadership to expose themselves at a ‘peace’ meeting/destroy the Cause’s primary base or holding/kill an absurd amount of dissenters*].

PLACES

A grand hall, where:

- The Cause’s bureaucracy is crumbling
- An official is about to overplay their hand
- A performance with unforeseen consequences is about to begin
- A betrayal is about to be revealed

A Carrier’s command deck, where;

- A terrifying order is about to be given
- A mistake is about to be made
- A coup attempt is made
- Someone has a moment of clarity

A secret location, where;

- The players aren’t welcome
- The players are, suspiciously, very welcome
- Something is revealed to have been vastly misunderstood
- Something equally as bad is happening far more quietly

PEOPLE

An ace Authority channeller who is;

- Aghast at the lengths the Authority is going to
- A Cause agent in deep cover
- Responsible for pulling the trigger, whatever that looks like

A diplomat who is;

- Moving resources in a very unhelpful way
- Moving resources in a very unhelpful way, intentionally
- Trying to cajole a reticent group into action

A chief Artificer who is;

- In charge of the Authority’s team working on the [*macrospell/Astir/etc*]
- Looking for a weakness in the Authority’s plan
- On the verge of a magical breakthrough

THINGS

- | | |
|---|---|
| <ul style="list-style-type: none">• Something unrecognisable• A door that shouldn’t be open• An immense magical gemstone• Forgotten bones• A construct of vast size | <ul style="list-style-type: none">• A dropped key• Files meant to be burned• A bribe• Something you think is yours• A volatile potion |
|---|---|

MISSION HOOKS

AUTHORITY ATTACK!

The Authority is raiding [*a small town/a Cause stronghold/an off-planet colony/a major city*] in order to [*search for something/capture and occupy it/destroy Cause morale*]. It falls to the players to fend off the assault and save the day, even though [*one of the players calls this place home/a grand Cause secret is sequestered here/this place was once sacred to the Authority*].

PLACES

A warehouse, where:

- A prototype Astir is waiting
- The Authority have found a way in
- Evacuees have found shelter
- Something isn't right

A street, where;

- Drastic action is about to be taken
- Something hidden is being uncovered
- A stand-off occurs
- Innocents are left vulnerable

The outskirts, where;

- A heated skirmish is building
- Something is amiss
- A declaration is made
- An escape route is being protected

PEOPLE

A civilian leader who is;

- Held hostage by the Authority
- Hiding out with something important
- Leading evacuation efforts

An Authority channeler who is;

- In no way ready to lead this mission
- Out for revenge
- Trying to prove themselves to their superiors

A civilian who is;

- In the wrong place at the wrong time
- One of the players (better find yourself an Astir)
- Taking matters into their own hands

THINGS

- | | |
|---|--|
| <ul style="list-style-type: none">• A childhood home• An unfinished miracle• A stockpile of arms• A broken gate• A system of canals | <ul style="list-style-type: none">• A hoisted flag• A missing shipment• A hole in the wall• A number of gold bars• A delicate alchemical process |
|---|--|

APPENDIX

RISK & PERIL EXAMPLES

RISKS

Risk (distracted) - Something has caught your eye, and it's very distracting. Maybe you could make some space and collect your thoughts?

Risk (targeted) - Missile lock! Evade, evade! Could you counterspell the targeting systems, or put something between you and the missiles?

Risk (suppressed) - You're being held at bay by suppressing fire. Maybe you could take them out, or find some cover.

Risk (on fire) - Your Astir is on fire. It's really hot all of a sudden. You could find some water, or do something else to extinguish the flames.

Risk (bleeding) - That's a nasty cut you've got—you could bandage it up, or try to close the wound with magic...

Risk (chilled) - Brrr! You or your Astir are all frosty. Find a way to turn up the heat, or chip away that building ice.

Risk (flirty) - Can love bloom on the battlefield? You're hoping, but maybe you just need a minute to cool off.

Risk (scared) - Getting in an Astir can be pretty frightening. Maybe someone could talk you down, or maybe you just need to face your fear.

Risk (disrupted) - Your Astir's systems have been messed up, knocked out of alignment, etc. You could magically re-align them, or manually open things up and fix the problem.

Risk (angry) - That was too damn close! You're real mad about it! You could get rid of the target of your frustrations, or just try to get some space from them.

Risk (unaware) - You just didn't know they were coming for you! Lucky for you, the moment you have this *risk* it will probably remove itself very quickly... when your attacker hits you.

PERILS

Peril (exhausted) - You're running on empty. Little short of a real rest will fix that.

Peril (wounded) - That's more than a little bruise or cut—you need real medical attention for this one.

Peril (broken limb) - Whether it belongs to you or your Astir, this needs proper treatment—and for your Astir, maybe replacement.

Peril (impaled) - You'd better leave that where it is. It's going to get in the way, but it'd get worse if you took it out...

Peril (furious) - Something REALLY got to you, huh? You're mad in a way that sticks even when the fire dies down, and need some real time to work things out.

Peril (bad rep) - Your reputation with someone or something has taken a real hit. It's going to be trouble until you do the work to fix things.

Peril (in love) - It turns out love can bloom on the battlefield, and it's got you good. There's a few ways you could resolve this one.

Peril (burnout) - Overheating has seared the inside of your Astir, destroying parts. This calls for some real internal repairs.

APPENDIX

GLOSSARY & SHORTHANDS

Sortie: A period of time in which the players have left their Carrier to fight, scout or otherwise act with an objective in mind.

Mission: A larger goal that would take multiple Sorties to achieve.

Campaign: A full game of Armour Astir, consisting of several Missions and ending in resolution in some way of the core conflict.

Trait: The 6 stats that cover your characters abilities and are used to make moves.

GRAVITY: A measure of one characters admiration and understanding of another.

Cause: The group that you and yours represent in your fight against an Authority.

Authority: The primary antagonistic group of your game.

Dangers: *Dangers* are effects that make you vulnerable to harm, physical or otherwise. *Dangers* are split between minor ‘risks’ and more serious ‘perils’.

Defenceless: Being defenceless means that you must **BITE THE DUST** when threatened by harm, physical or otherwise.

Approach: The five **approaches**: mundane, **arcane**, **divine**, **profane** and **elemental**. **Approaches** offer **confidence** or **desperation** when using **EXCHANGE BLOWS** and **STRIKE DECISIVELY** and are determined by your playbook or by an Astir or Ardent. Some weapons have their own **approach**, which overrides your usual if you choose to use it.

Tag: A tag is a small note that provides some narrative or mechanical information that can be easily added to an object or character to provide detail or customisation.

Weapon: Something used to inflict harm on someone else (by design or otherwise).

Gear: Any piece of useful equipment that isn’t used to hit someone over the head.

Construct: A magically-powered machine or vehicle. Constructs typically require a Channeler to pilot and fuel them, though some are automatons. Ardents, familiars, and Armour Astirs are all constructs.

Armour Astir: Astirs are powerful enchanted constructs, typically at least 20-30ft tall at least, that must be piloted by a Channeler who provides the magic required for them to function. They’re mechs. You know what these are.

Ardent: A mobile construct, smaller and simpler than an Astir. Some require a driver or controller, though anyone with the skill will do, and some have a life of their own. Ardents can be anything from mechanical steeds to magical tanks and beyond.

Familiar: Familiars are small, autonomous constructs that assist their master with a narrow field of tasks. Like a drone, or funnels/bits.

Artifact: A part of your Astir that can be activated with the **SUBSYSTEMS** move to give you **advantage** on a roll, before or after you make it.

Advantage: To roll an additional die and take the highest two.

Disadvantage: To roll an additional die and take the lowest two.

Confidence: To treat any dice result of 1 as a 6 instead.

Desperation: To treat any dice result of 6 as a 1 instead.

APPENDIX

MAGICAL OBJECTS

d66	Object
11	A set of cooking utensils that are always spotlessly clean.
12	An orb that floats by the head of its owner, providing them with wisdom.
13	A coin that always lands as it is called.
14	A basket of porcelain spheres that move to form a model of the solar system when laid on black cloth.
15	An ornamental sword that any onlooker views as tailor made for them.
16	A jar of sand that wards the bearer against fear.
21	A clay tablet that can capture a perfect rendering of any scene it is held up against.
22	A map that may be temporarily written on with your fingers.
23	A thin crystalline needle that constantly points at the closest source of invisibility magic.
24	A hammer that will drive nails through anything.
23	A silver token that prevents the holder from knowingly lying.
26	A small vial of liquid that burns through everything except glass.
31	A gold-painted ring that alters divination magic cast by the wearer to show more hopeful or lucky futures and outcomes.
32	An iron rose that sprouts thorns in the hands of someone who has broken a vow or promise.
33	A gem that can capture words from the bearer's target.
34	A shield that can hold back any flood.
35	A feathered cloak that projects a waterproof barrier around the wearer.
36	A box that only opens during an eclipse.
41	A knife and fork that vibrate gently in the presence of poison.
42	A set of hand-made dice that only ever roll 3's.
43	An adhesive that will bond any two things.
44	A solvent that will separate any two things.
45	A mask with jewelled lenses that feeds false information about the wearer to anyone who would use mind-reading magic on them.
46	A lock that merges with any surface it is pushed into, until unlocked.
51	A wax strawberry that becomes poison once a trigger word is spoken.
52	A flag that slowly ruins the soil wherever it is planted.
53	A never-ending ball of string.
54	A fake paper Astir that folds up to fit in your pocket.
55	A thin stone disc that floats freely wherever it is left, and can support a few kilograms of weight.
56	A keyring that guides the holder to lost keys.
61	A leather collar that hides the wearer from magic that detects living creatures.
62	A crown that repairs itself and reshapes itself to fit any head.
63	A short knife that is capable of cutting through any non-magical rope, cord or chain.
64	A gauntlet fitted with a jewel that can conjure a storm overheard.
65	A pair of gloves that can touch in the intangible.
66	A pair of picture frames that act as a portal to each-other.

APPENDIX

MAGICAL WEAPONS

d66	Object
11	A spear that binds those injured by casting chains from their blood.
12	A sheathe from which a blade of any length can be drawn.
13	A long Astir's cannon that fires shells full of magically contained magma.
14	A launcher filled with wands that cast blighting spells upon impact.
15	A javelin that trails flame behind it when thrown.
16	A wand that allows the bearer to draw down bolts of lightning.
21	A flintlock pistol with rounds guided by bound spirits.
22	An ornamented halberd that lets forth a terrifying roar when it takes a life.
23	Paired swords that unerringly track wounds left by the other.
24	An Astir-sized staff capable of spraying beams of frost.
23	A crossbow adorned with elemental crystals that charge its bolts with thunderous energy.
26	A bow, made from the wood of a tree grown in blessed grove.
31	A set of perfectly balanced bronze orbs.
32	Three silver arrows, each with a small plaque for a target's name.
33	A pair of alchemical mortars, designed to flood the world with toxin.
34	A rifle loaded with thick pieces of magical crystal.
35	A hollow mace, from which sticky tar oozes.
36	A ballista that trails a path of solid, tangible light behind its bolts.
41	A multi-chambered firearm designed to fire lead-encased scrolls.
42	A flat-tipped executioner's sword that leaves only closed wounds.
43	A brace of flintlocks that briefly crack open thin portals to a much more incendiary realm than ours.
44	An axe carved wholly from one huge, serrated fang.
45	A pouch of small gems that explode dramatically when shattered.
46	A blade that is magically incapable of leaving wounds.
51	A long whip embedded with venomous, weeping thorns.
52	A catapult that conjures a new payload into existence after every shot.
53	A ring of keys which can magically merge into a small blade.
54	A lightweight lance, embellished with golden seals that attempt to deflect any magic that would harm their bearer.
55	A thin glass orb filled with acid, that slowly repairs and refills itself after smashing against its holder's target.
56	A silver dagger that can be safely hidden in the flesh of its bound owner.
61	A heavy mace that emits a dispelling field, designed to stop Astirs without causing damage that would make them unsalvageable.
62	A winged spear that grants the bearer limited flight in pursuit of their foe.
63	A contraption that fires searing javelins accurately in trios.
64	A matched pair of long-clawed gauntlets, which harbour a charge of frosty magical energy.
65	A crystalline wand, charged with spells that brand those struck.
66	A long-handled axe, enchanted to whip up heavy winds whenever it is swung in anger.

RELEASE NOTES

V1.1 Tag Rework

- Reworked tags to be organised by value, rather than a simple mechanical/narrative split.
- Edited some Cantrips. Honestly, thinking about just removing them? How do people like Cantrips. What's the vibe.
- Made certain headers **BIGGER**.
- Provided actual rules for buying/acquiring equipment based on value.
- Revised the starting gear for a few playbooks.
- Reduced starting Traits to +2 total, but gave Supports a Quarters option to add an extra +1.
- Rebalanced many Astir weapons in line with the new tag costs.

V1.0 Full Release

- Reworked the Conflict Turn heavily! See alterations to Conflict Scenes and Regions—now **Pillars**—primarily.
 - Updated **PLAN & PREPARE** in line with the above Conflict Turn changes.
 - Tweaked Alchemical Suite a bit to prevent a huge amount of ward stacking. Also made some other minor changes to Astir parts.
 - Made Quarters a little stronger! You don't get an Astir so it's only fair.
-
- **1.01:** Minor spelling and grammar corrections. Wording clarified in various spots. Cleared up remaining references to Stake.
 - Added some extra notes about tier and attacking with a weapon (or something else with a profile). Also added some notes about using things of a lower tier than yourself.

V0.8 “Mostly Small Changes, But I Wanted To Increase The Version Number”

- Further clarifications to the Conflict Turn.
- Some minor playbook tweaks.
- Art! More pieces from Si added. Check the example foes sections!
- Added a third Resolution to all the Conflict Scenes.
- Added extra options to **THE DISCOURSE**.
- Added more art!

V0.7 “Three Moves AND An Astir? Now Hold On.”

- The great Playbook Streamlining has taken place. Channeler playbooks now start with a single move—many started with a Move that was just a GRAVITY trigger, really, which has now been formalised as a simple per-playbook trigger—and it has now been specified in the Astir section that your Astir Move can just be plucked straight from your Playbook or from the Cantrips list like any other. This feels like a big nerf, but realistically it's still two Moves (including your Astir Move)! That feels fine, to me, especially alongside the GRAVITY trigger being kept. Spotlight too will hopefully make advancements a little faster, as well as GRAVITY clocks being +1 by default. All in all, playbooks should feel a little less busy to start with, but advancements should feel... actually attainable.
- Support playbooks have gotten some tweaking too, but without an Astir they've only been stripped down to two instead of one. They still get a Carrier room, etc.
- **0.75:** Downtime Actions are Downtime Scenes now! Playbooks and other mechanics have been updated to match.
- Corrections! I've been making them. Thanks to everyone in the official Discord who spots the many mistakes I make, constantly.
- **0.76:** Streamlining and updates to the Conflict Turn, just to try and make things a little easier to remember.
- **0.77:** Further streamlining and updates to the Conflict Turn. Additional art added to the main doc.

RELEASE NOTES & CREDITS

ACKNOWLEDGEMENTS

As a Powered By The Apocalypse game, Armour Astir naturally owes a lot to *Apocalypse World* by Vincent Baker and Meguey Baker. Thank you for teaching me about failing forwards. It's great. Additional design influences include *Technoir* by Jeremy Keller, *The Sprawl* by Hamish Cameron, *Masks* by Brendan Conway, *Scum & Villainy* by Stras Acimovic and John LeBoeuf-Little, *We Made Them Look Like Us* by Takuma Okada, *Tendencies: Spirits & Glamour* by Dusty De Leon, and countless others. Additionally, a huge thanks to the members of the Treehouse discord, for answering more questions and tipping more of my words in the right direction than I could ever keep count of. You and the work you all do inspires me every day.

SPECIAL THANKS

I'd also like to thank the cast of Friends At The Table, who re-ignited my love of tabletop role-playing after one too many long nights of Pathfinder. This game wouldn't exist without you.

Additionally, I'd like to thank Em and Jackson of Abnormal Mapping. Without the Great Gundam Project I never would have had the motivation to keep watching, and I'm very glad I did. I love those cool robots.

Shout-outs to discord servers I call home. Thank you for opening your doors and making me feel at home. I'm glad to know you all, even if you give me headaches at 3am.

Thanks to my partner, Dusty, who spurs me on to think about design and why I make things the way I do so often. You're my biggest inspiration, the funnest person I know, and the best GM I've ever played with. I love the stories we tell together almost as much as I love you.

Last but absolutely not least, a special thanks to my dear friend Thursday! I couldn't ask for a better friend, and I'm eternally glad to know how much my design work fuels your love of mecha.

MISC.

Other things I enjoyed throughout this games development include;

- Podcasts: *The Shrieking Shack*, *Waypoint Radio*, *Emojidrome*, *Film Critters*, *The Magnus Archives*, *Hold This L*, *Borat Club*, *Just King Things*, *A More Civilised Age*, *Night Clerk Radio*,
- Books/Comics: *Delicious In Dungeon*, *Dead Dead Demon's DeDeDeDe Destruction*, *Dorohedoro*, *Ancillary Justice/Sword*, *Consider Phlebas*, *Player Of Games*, *Little Teeth*, *Men Women & Chainsaws*, about 25% of *From A Certain Point Of View (The Empire Strikes Back)*, *The Honjin Murders*
- Games: *Dragon's Dogma: Dark Arisen*, *Risk of Rain 2*, *Path of Exile*, *Disco Elysium*, *Outer Wilds*, *Timespinner*, *Battletech*, *Umurangi Generation*, *Destiny 2*, *DUSK*, *Resident Evil 2 Remake*, *Resident Evil 7*, *Resident Evil Revelations*
- TV/Films: *Dirty Pair*, *The Tatami Galaxy*, *Us*, *Get Out*, *Armored Trooper VOTOMS*, *Nichijou*, *Midsommar*, *Raw*, *Ghost In The Shell: SAC*, *Night Is Short, Walk On Girl*, *Hardware*, *Nosferatu the Vampyre*, *Pontypool*, *Parasite*, *Kamen Rider Kuuga/Agito/Faiz/Blade/Hibiki/Kabuto/Ex-Aid/Build/Den-O/Revice*, *Riverdale*, *What We Do In The Shadows*

FONTS

Fonts used throughout this game include Gentium Book Basic, Tw Cen Mt, Scheherazade, Poor Richard, Perpetua, Centaur, **Berry Rotunda**, Liberation Sans, Liberation Sans Narrow and Liberation Serif.

Briar Sovereign is a trans, nonbinary games designer and writer based in the UK. They love mechs, magic, and Kamen Rider: only two of which feature in this book, unfortunately.
